Team STEPPS Universal Protocol 1-2-3

Non-OR Procedures

Step 1: PRE-PROCEDURE VERIFICATION

Includes Proceduralist, All Team Members, and Patient *(as applicable)*

- Patient ID confirmed by using two patient identifiers verifying full name and DOB
- Verify procedure
- Correct, position, side, and site are marked (*if applicable)*
- Safety precautions based on patient history (ex. Syncope, anticoagulation, allergies, special positioning, weight)
- Required equipment, supplies, devices, & medications are available, labeled correctly, and functioning
- Required specimen supplies
- Sterility must be maintained throughout entire procedure

Step 2: TIMEOUT

A Deliberate Pause and Review by Proceduralist and All Team Members

Conducted immediately after the prep and drape, and before the invasive procedure/incision

- Confirm all elements in STEP 1
- Completed Consent is accurate and consistent with planned procedure, is signed, dated, and witnessed
- Proceduralist initials (or Alternate Marking Method) visible on correct site/side
- Correct images confirmed and properly displayed (*if applicable)*
- Fire Risk assess/Score – HIGH or ROUTINE (*if applicable)*
- Accountability of all items that touch patient
- Comments or concerns from patient and team

Step 3: DEBRIEF

A Deliberate Pause and Review by Proceduralist and All Team Members

Conducted before leaving the patient (as applicable)

- Proceduralist verifies procedures performed
- All wires, catheters, sheaths, and any items that touch the patient during the procedure must be:
  - ⇒ Accounted for
  - ⇒ Intact
- Specimens labeled correctly & disposition verified
- Medication used on field verified
- Sterility was maintained throughout entire procedure
- Comments or concerns from patient and team
- Post procedure plan of care/disposition

⇒ Don't forget: - Documentation of Steps 1, 2, & 3
- Inventory results completed in approved note
