Supersedes: AFMAN11-404, 27 November 2019
Pages: 26

This manual implements Department of the Air Force Policy Directive (DAFPD) 11-4, *Aviation Service*. It establishes guidance and procedures for the acceleration training of aircrew and operational support flyers who are either currently flying or are selected to fly high-gravitational load factor (G) aircraft. This publication applies to the Regular Air Force (RegAF), Air National Guard (ANG), and Air Force Reserve (AFR). This publication does not apply to the United States Space Force. This publication requires the collection and or maintenance of information protected by the Privacy Act of 1974 authorized by System of Records Notice DoD 005, *Defense Training Records* available at: **http://dpclo.defense.gov/Privacy/SORNs.aspx**. Ensure all records generated as a result of processes prescribed in this publication adhere to Air Force Instruction (AFI) 33-322, *Records Management and Information Governance Program*, and are disposed in accordance with (IAW) the Air Force Records Disposition Schedule, which is located in the Air Force Records Information Management System. Refer recommended changes and questions about this publication to the office of primary responsibility (OPR) using the Department of the Air Force (DAF) Form 847, *Recommendation for Change of Product*; route DAF Forms 847 from the field through the appropriate functional chain of command. This publication may be supplemented at any level, but all supplements must be routed to the OPR of this publication for coordination prior to certification and approval. The authorities to waive wing, unit, or delta level requirements in this publication are identified with a tier ("T-0, T-1, T-2, T-3") number following the compliance statement. Submit requests for waivers through the chain of command to the appropriate tier waiver approval authority, or alternately, to the publication OPR for non-tiered compliance items. See Department of the Air Force Manual (DAFMAN) 90-161, *Publishing Processes and Procedures*, for a description of the authorities associated with the Tier numbers.

SUMMARY OF CHANGES

This document is substantially revised and must be completely reviewed. Changes include: 1) re-designating the F-35 to a Type 2 aircraft, 2) requiring the 37th Training Wing (37 TRW) to provide registrar support for tracking aircrew training in Oracle Training Application (OTA), 3) requiring Instructor Pilots (IP) who evaluate other aircrew on their Anti-G Straining Maneuver (AGSM) to complete minimum academics on the physiological effects of G-forces and the AGSM, 4) accepting United States Navy (USN) F-16 centrifuge training as meeting the USAF Type 2 centrifuge training standards, 5) designating all F-15 aircraft as a Type 2 aircraft, 6) removing the Fighter Aircrew Conditioning Program (FACP) requirements, and 7) removing centrifuge training profiles for Primary, Advanced, Refresher and Commander Directed Acceleration Training.

Chapter 1

INTRODUCTION

1.1. Purpose and Scope. This manual governs the Fighter Aircrew Acceleration Training Program, which teaches the physiological stresses of acceleration and aircrew flight equipment associated with modern high-G military aviation and prepares the trainee to meet these challenges.

1.2. Waiver Authority. Unless otherwise specified, Director of Training and Force Management, Deputy Chief of Staff of Operations (AF/A34) is the waiver authority for the provisions of this manual. Approved waivers will be posted IAW DAFMAN 90-161, *Special Management: Publishing Processes and Procedures*. Additionally, submit informational copies of approved waivers to the Headquarters Air Force Aircrew Performance Division (AF/A34P) at **af.a34P.workflow@us.af.mil** and Aerospace Physiology (AP) Lead Command at **aetc.ap.leadcommand@us.af.mil** within 30 duty days of waiver completion.

1.3. High-G Aircraft Categories. High-G aircraft (HGA) are divided into two categories.

1.3.1. Type 1 - Aircraft capable of rapid G-onset rates greater than 6.0 G/sec but are typically not employed above 7.5 Gz. Examples of United States Air Force (USAF) aircraft which meet this definition are: A-10C, T-38A/C, and AT-38B.

1.3.2. Type 2 - Aircraft capable of rapid G-onset rates greater than 6.0 G/sec and sustain G-loading greater than 5 seconds above 7.5 Gz. Examples of USAF aircraft which meet this definition are: F-15C/E/EX, F-16C/D, F-22A, and F-35A.

1.4. Program Goals and Concepts. The goal of acceleration training is to prepare aircrew and operational support flyers for high-G flight and enhance combat capability and safety by optimizing aircrew defense against G-induced Loss of Consciousness (G-LOC). This goal is accomplished through education and practical experience. Instructors will teach physical conditioning, anti-G equipment, G-oriented situational awareness, the physiology of high-G flight, and awareness of factors that affect an aircrew's G-tolerance. **Note:** This manual addresses only the centrifuge training portion of the G-awareness program. For information regarding continuation training requirements, see Air Force Manual (AFMAN) 11-2F-16V1, *F-16--Aircrew Training*, AFMAN 11-2F-15V1, *F-15--Aircrew Training*, AFMAN 11-2A-10CV1, *A-10C--Aircrew Training,* AFMAN 11-2T-38V1, *T-38 Aircrew Training*, AFMAN 11-2F-22AV1, *F-22A-Aircrew Training,* and AFMAN 11-2F-35AV1, *F-35A--Aircrew Training*.

1.5. Benefits of Centrifuge Training.

1.5.1. The centrifuge is the best platform for teaching a proper AGSM technique.

1.5.2. The training will train and evaluate aircrew on a properly performed AGSM in a controlled environment, address strategies to improve aircrew performance under G-stress through the proper fit and use of protective equipment, as well as identify aircrew with poor AGSM skill or performance.

Chapter 2

ROLES AND RESPONSIBILITIES

2.1. Headquarters Air Force.

2.1.1. Headquarters Air Force, Deputy Chief of Staff for Operations, Director of Training and Force Management (AF/A34).

2.1.1.1. Manages and establishes guidance and policy for aircrew training as outlined in this manual to ensure compliance with DoW policy.

2.1.1.2. Provides fiscal advocacy to AF personnel and training panels for planning, programming and budgeting requirements to support the AP centrifuge training program.

2.1.1.3. Resolves conflicts in MAJCOM guidance.

2.1.1.4. Designates a Chief, Aircrew Performance Division, and respective Career Field Managers (CFM) 13HX and 1H0X1.

2.1.2. Aircrew Performance Division (AF/A34P).

2.1.2.1. Coordinates with 13HX and 1H0X1 CFMs on acceleration training program policy and guidance updates/changes.

2.1.2.2. Reviews MAJCOM supplements to this AFMAN to ensure MAJCOMs comply with guidance in this manual.

2.1.2.3. Acts as liaison between Air Staff organizations and MAJCOMs.

2.1.2.4. Coordinates with Air Staff organizations and MAJCOM Standardization and Evaluation (Stan/Eval) functions to ensure all subordinate guidance complies with policies contained in this manual and all other applicable guidance.

2.1.2.5. Works with Program Managers (PMs) and MAJCOM Functional Managers (MFMs) to identify and support MAJCOM-specific program requirements.

2.1.2.6. Coordinates on and processes applicable DAF Forms 847 through Operations Group channels (Numbered Air Force [if applicable] and MAJCOM). Air National Guard units will utilize the lead/gaining MAJCOM's process.

2.2. Headquarters Air Education and Training Command (AETC). Air Education and Training Command, Aircrew Performance Branch (AETC/A3OA). AETC is the Lead Command for the AP acceleration training program (AP Lead Command) and develops applicable syllabi, curriculum, and guidance.

2.2.1. AETC develops and distributes courseware, as well as incorporates feedback from the MAJCOMs, research from the 711th Human Performance Wing (711 HPW), updates to aircrew flight equipment and protective ensembles from the annual Aircrew Protection Executive Council (APEC) meeting, and relevant mishap investigation and prevention information from the AF Safety Center into AP acceleration courseware.

2.2.2. AETC establishes criteria, conducts evaluations, and provides recommendations for acceptance of formal international aircrew AP acceleration training programs to the office of Air Force International Affairs (SAF/IA), Air Force Security Assistance Training (AFSAT),

and AF/A34P. AETC coordinates with AF/A34P to recognize and accept non-USAF AP acceleration training programs for other U.S. military services and DoW agencies who fly on USAF aircraft.

2.3. Headquarters Air Combat Command (ACC). The lead MAJCOM for Combat Air Forces (CAF).

2.3.1. ACC, Operations (ACC/A3)

2.3.1.1. Will invite AP to participate in the Realistic Training Review Board.

2.3.1.2. Will include AP personnel in the modification, conversion, and acquisition of Weapons Systems and Aircrew Flight Equipment relevant to Acceleration Training.

2.4. Major Commands (MAJCOMs). MAJCOMs/National Guard Bureau (NGB)/Air Force Reserve Command (AFRC) that fly HGA.

2.4.1. Director of Operations (A3, or equivalent).

2.4.1.1. Develop and manage applicable MAJCOM supplements to this manual as required.

2.4.1.2. Ensure appropriate utilization of 13HX and 1H0X1 manning to execute acceleration training program requirements IAW this publication.

2.4.1.3. Serve as the waiver authority for refresher centrifuge training for aircrew returning to operational aircraft based upon the risk assessment provided by the operational commander (CC). MAJCOM A3s must coordinate waiver requests for formal course entry requirements if other MAJCOMs own the formal training course.

2.4.2. Director of Operational Capability Requirements (A5 or A8, or equivalent).

2.4.2.1. Ensure Mission Design Series (MDS) or Aircrew Flight Equipment acquisitions, modifications, or upgrades that affect G-performance are coordinated with AETC/A3OA for review and potential incorporation into acceleration training courseware. This review includes, but should not be limited to, courseware and training systems to ensure courses address MDS-specific physiological, human factors, and emergency procedure training requirements.

2.4.2.2. Coordinate with 711 HPW for programming required to acquire or modify existing centrifuge training systems to meet unique requirements as a result of new MDS or Aircrew Flight Equipment acquisitions/modifications/upgrades.

2.4.2.3. Program for development of acceleration training courseware specific to new, modified, or upgraded MDS and equipment during the acquisition process.

2.4.3. AP PM and MFM.

2.4.3.1. Conduct annual reviews of MDS-specific acceleration training to ensure relevancy to aircrew in the MDS and provide findings to AETC/A3OA. **Note:** AETC/A3OA will accomplish this on behalf of the AFRC and ANG in consultation with the senior AFRC and/or ANG 13HX, if available.

2.4.3.2. Participate in Realistic Training Review Boards as required.

2.4.3.3. Assess operational relevancy of acceleration training and reports assessment findings to AETC/A3OA (**aetc.ap.leadcommand@us.af.mil**) no less than annually.

2.5. Managing Wings. The following wings manage the operations, logistics, and training encompassing the centrifuge device.

2.5.1. The 711th Human Performance Wing. The 711 HPW is responsible for the following:

2.5.1.1. Oversees logistical support for the 711 HPW centrifuge provided via a human centrifuge maintenance service contract. Coordinates contract reviews and updates with 342d Training Squadron (TRS) and associated personnel.

2.5.1.2. Ensures proper quality assurance oversight of the contractor is maintained, which must be reviewed and updated with 37th Training Group and associated personnel. 711th Contracting Squadron has overall responsibility for the contract.

2.5.1.3. In coordination with AETC/A3, advocates for centrifuge device requirements, maintenance, sustainment, and improvement through the Air Force Research Laboratory (AFRL).

2.5.1.4. Provides 19th Air Force, Director of Operations (19 AF/A3) an updated annual, per student, training cost no later than the 31st of May each calendar year.

2.5.2. 37th Training Wing. 37 TRW is responsible for the following:

2.5.2.1. Executes the primary centrifuge training program and supports aircrew from multiple MAJCOMs and wings, as well as ANG, AF Reserve units, and international aircrew.

2.5.2.2. Provides logistical and fiscal support for the Acceleration Training Program.

2.5.2.3. Provides registrar support for formal aircrew tracking in OTA.

2.5.2.4. 342 TRS will execute centrifuge training IAW published 19 AF/A3 syllabus.

2.5.2.5. Publishes and distributes an annual centrifuge training schedule to 19 AF/A3, Air Combat Command (ACC)/A3T, Air Force Personnel Center (AFPC) Rated Pipeline Assignments Section (AFPC/DP2ORC), and all Undergraduate Flying Training base registrars.

2.6. Operations Group Commander (OG/CC), or equivalent.

2.6.1. Ensure AP Training Units (APTUs) provide AGSM academic training and instruction with MDS appropriate focus (e.g., aircrew flight equipment, oxygen regulator configuration).

2.6.2. Ensure assigned 13HX and 1H0X1 personnel are trained IAW Air Force Specialty Code requirements.

2.7. Flying Squadron Commanders.

2.7.1. Work closely with Aircrew Conditioning Program (ACP) instructors (or trained AF personnel at joint training sites or ANG/AFRC units) to identify those students that may need improved fitness for G-tolerance. **Note:** This responsibility may be delegated to flight commanders. Several factors may be used to determine that a student need improved fitness for G-tolerance, including inadequate AGSM performance in the aircraft, evidence of poor

physical fitness, and indicators of AGSM error noted during Heads Up Display (HUD) tape reviews.

2.7.2. Request individualized fitness training programs for enhancing G-tolerance for flying training students, as needed, from the ACP Instructor (or trained AF personnel at joint training sites or ANG/AFRC units) when appropriate. For instance, a student demonstrates early physical fatigue or difficulty in executing an effective AGSM.

2.7.3. Ensure ACP Instructors execute training IAW the undergraduate/graduate flight training syllabi.

2.8. Aerospace Physiology Training Unit (APTU), or equivalent. APTUs will ensure that AP officers, AP technicians, or other AF personnel at joint training sites, AFRC or ANG units have been trained to execute acceleration training.

Chapter 3

TRAINING REQUIREMENTS

3.1. Personnel Who Require Acceleration Training. Manned HGA flight is high-risk due to the operator's inability to sustain consciousness during certain flight maneuvers. Rated aircrew and other flyers exposed to high-G flight require acceleration training to increase awareness of personal limitations, reduce G-LOC risk, decrease the likelihood of Class A mishaps related to G-forces, and improve overall flight safety across the USAF.

3.1.1. Rated Aircrew. All USAF rated aircrew assigned to a flying billet in Type 1 or Type 2 aircraft are required to successfully complete centrifuge training. **(T-1)**

3.1.2. Other Flyers.

3.1.2.1. OG/CCs, or equivalent, will determine centrifuge requirements for any non-rated aircrew, operations support flyers, or any other individuals assigned aeronautical orders participating in high-G flight based on the individual's duties and anticipated G-exposure. **(T-2)**

3.1.2.2. AP with Air Force Specialty Code 13HX/1H0X1 will receive training as prescribed by their respective Career Field Education and Training Plans.

3.2. Special Training Requirements.

3.2.1. Instructor pilots (IPs) who evaluate aircrew on AGSM ability must receive academic instruction on the physiological effect of G and the AGSM. **(T-2)** This instruction will be provided by assigned Aerospace Physiology personnel. Units without assigned AP personnel will satisfy this requirement using the standardized courseware developed and sanctioned by AP Lead Command.

3.2.1.1. The official AP Lead Command courseware will be made available via the AETC Bookstore: **https://trss3.randolph.af.mil/bookstore/home/homePage.aspx**.

3.2.1.2. At units without assigned AP personnel, a qualified Instructor Pilot, designated in writing by the unit commander, will facilitate this training.

3.2.1.3. All instruction, whether provided in-person by AP personnel or facilitated using AP Lead Command courseware, must cover, at a minimum: preparatory breath timing, glottis control & engagement, air exchange, and general AGSM application and consistency.

3.2.2. Pilots flying T-38 aircraft are required to complete Primary Acceleration Training (PAT) IAW **paragraph 3.7.1** unless excluded in the following situations: (1) aircrew that fly the T-38 aircraft only for landing currency, (2) aircrew that fly the T-38 for the Companion Trainer Program if maneuvering is limited to less than 6.0 Gz, or (3) pilots in courses who will not continue flying USAF aircraft (e.g. U.S. Navy (USN) Test Pilot School Attendees). **(T-2)**

3.2.3. T-38 aircrew excepted in **paragraph 3.2.2** are required to attend AGSM academic training conducted by qualified AP personnel, a flight surgeon, or qualified T-38 IP and must be evaluated in the aircraft by a qualified T-38 IP. **(T-2)**

3.3. U.S. Navy Training Acceptance. USAF accepts USN F-18 centrifuge training for Type 1 and USN F-16 centrifuge training for Type 2 aircraft.

3.4. Passengers Training. Passengers scheduled for flight(s) aboard Type 1 and Type 2 aircraft will receive AGSM training conducted by qualified AP personnel, flight surgeons, or qualified IP no earlier than 120 hours before flight. **(T-3)**

3.5. International Aircrew Training.

3.5.1. International aircrew flying USAF trainer or fighter aircraft who have met USAF centrifuge training standards as documented on the international program acceptance letter are not required to complete additional USAF centrifuge training. **Note:** See **paragraph 3.6** for more information on foreign training program acceptance. International aircrew must provide proof of international centrifuge training to local AP personnel for review and documentation on AF Form 1522, *Aviation Resource Management System (ARMS) Additional Training Accomplishment Report*. Proof of training must be in English and include completed profiles, peak G-level, and date of training. Questions on international documentation will be referred to AETC/A3OA.

3.5.2. International aircrew that have no prior centrifuge training, are noncurrent in centrifuge training, or trained in international centrifuge training programs with expired acceptance, must retrain IAW this manual.

3.5.3. All international Euro-North Atlantic Treaty Organization Joint Jet Pilot Training (ENJJPT) IPs must meet acceleration training requirements IAW North Atlantic Treaty Organization Standardization Agreement.

3.5.4. Completion of accepted initial foreign acceleration training qualifies foreign aircrew members to receive USAF Refresher Acceleration Training (RAT) when needed.

3.6. Foreign Training Program Acceptance.

3.6.1. Acceptance of physiological training IAW AFMAN 11-403, *Aerospace Physiology Training Program,* does not imply acceptance of a nation's centrifuge training program. The acceptance trips may be combined, but each review is accomplished independently.

3.6.2. Requests for USAF AP program acceptance from other countries must be initiated through the appropriate country manager at SAF/IA and/or AFSAT, who will coordinate with AP Lead Command to review the training program. **(T-1)**

3.6.3. SAF/IA will prioritize and coordinate with AFSAT and Embassy Air Force Branch Chief or International Military Education and Training (IMET) Branch Chief, if applicable, to fund country approval requests. **(T-1)**

3.6.4. Upon request from SAF/IA and/or AFSAT, AP Lead Command will identify the best qualified AP personnel to review the requesting country's acceleration training program. **(T-1)** AP Lead Command will conduct MAJCOM 2-Ltr coordination of the AP personnel request to support the foreign country acceptance review process.

3.6.5. An in-country visit is required for initial certification and observed classroom instruction must be in English. **Note:** Only the quality of training is taken into consideration for foreign program acceptance, not the quality or proficiency of English.

3.6.6. Recertification may be accomplished via courseware review at the discretion of AP Lead Command. SAF/IA will prioritize and coordinate with AFSAT to fund for country approval requests.

3.6.7. In country visits for recertification, if deemed necessary by AP Lead Command, must be in English, and will only occur after establishing training curriculum acceptability (e.g., syllabi, courseware, centrifuge training profiles). **(T-1)**

3.6.8. All documentation submitted in pursuit of program acceptance must be in English.

3.6.9. Reviewers will provide a written summary of their findings and recommendations to AP Lead Command to support the country's acceptance determination. **(T-1)**

3.6.10. Foreign training program acceptance is valid for five years from the last day of the month acceptance is granted.

3.6.11. An in-country visit is recommended at least every second review (10 years).

3.6.12. USAF aircrew must receive acceleration training from USAF AP regardless of the foreign program acceptance status.

3.7. Centrifuge Training Courses. Authorized centrifuge training facilities are identified in the Education and Training Course Announcements (ETCA) site **https://usaf.dps.mil/teams/app10-etca/SitePages/Home.aspx**. See ETCA for contact information for scheduling, reporting, and missing documentation requests.

3.7.1. Primary Acceleration Training. PAT prepares aircrew for Type 1 HGA flight. PAT is normally conducted between the primary (T-6) and advanced (T-38) phases in Undergraduate Pilot Training (UPT) and ENJJPT for pipeline students. PAT may occur prior to the completion of primary flight training.

3.7.1.1. Successful completion of PAT is a prerequisite for entry into the A-10 Formal Training Unit (FTU) course. **(T-1)** Previous completion of PAT is sufficient to meet this requirement. For example, former F-15E Combat Systems Officers (CSO) who have previously passed 7.5 Gz Training or PAT, and are now a student in UPT, are not required to complete PAT a second time.

3.7.1.2. Pilots reporting to Type 1 training outside of UPT pipeline must complete PAT training (e.g., C-17 pilot enrolled in Test Pilot School who will fly T-38 in TPS). **(T-1)**

3.7.2. Advanced Acceleration Training (AAT). AAT is designed to illustrate differences between Type 1 and Type 2 flight. Aircrew with previous PAT completion selected for, or transitioning to, F-15C/E/EX, F-16, F-22 or F-35 aircraft will attend AAT IAW the following:

3.7.2.1. AAT requirements for F-15 aircrew.

3.7.2.1.1. Successful completion of AAT is a prerequisite for F-15C/E/EX student entry into the F-15 FTU courses. **(T-2)** Student CSOs assigned to F-15, will receive AAT after completion of CSO training and before the first flight of Introduction to Fighter Fundamentals (IFF) or Fighter Bomber Fundamentals (FBF). **(T-2) Exception:** 4th OG/CC may, on an individual basis, accept students that successfully complete PAT but cannot successfully complete AAT for F-15 FTU Courses. Individuals accepted using this exception are assignable only to F-15E units, until such time they successfully complete AAT.

3.7.2.1.2. Existing F-15E aircrew with current PAT remain qualified for the F-15E and do not require AAT until transitioning to F-15C/EX. **(T-2)**

3.7.2.1.3. Existing F-15EX aircrew with current PAT remain qualified for the F-15EX and do not require AAT to transition to F-15C/E. **(T-2)**

3.7.2.1.4. Senior Officers with current PAT transitioning to F-15E do not require AAT until transitioning to F-15C/EX.

3.7.2.2. AAT requirements for F-16 aircrew. Successful completion of AAT is a prerequisite for entry into FTU courses.

3.7.2.3. AAT requirements for F-22 aircrew. Successful completion of AAT is a prerequisite for entry into FTU courses.

3.7.2.4. AAT requirements for F-35 aircrew. Successful completion of AAT is a prerequisite for entry into FTU courses. **Exception:** F-35 aircrew who were qualified to fly the F-35 with PAT only, prior to April 2018, remain qualified to fly the F-35 and do not require AAT.

3.7.3. Refresher Acceleration Training. RAT is designed for aircrew who previously completed PAT or AAT and are returning to Type 1 or Type 2 aircraft after a break in flying. A break in flying starts from the last flight as a current and qualified aircrew member on aeronautical orders. **Note:** Follow the rules outlined in DAFMAN 11-401, *Aviation Management*. Logging Primary, Instructor, or Evaluator flight time satisfies this requirement. Logging Other time or completing indoctrination or familiarization flights does not satisfy this requirement.

3.7.3.1. Aircrew returning to a Type 1 aircraft after a break in flying HGA of more than 39 months must complete Type 1 RAT. **(T-2)**

3.7.3.2. Aircrew returning to a Type 2 aircraft after a break in flying HGA of more than 39 months must complete Type 2 RAT. **(T-2)**

3.7.3.3. AP personnel and flight surgeons who previously completed Non-Pipeline Acceleration Training (NPAT) training are not required to complete Type 1 or Type 2 RAT after a break in active flying. **(T-2)**

3.7.4. Commander-Directed Acceleration Training (CDAT). CDAT is available to commanders at all levels to address an aircrew member's specific AGSM challenges or to build confidence in that member's AGSM. It can be scheduled at any point in an aircrew member's career, to include while in training courses.

3.7.4.1. CDAT is a graded event that follows all grading criteria in **Chapter 4**. **(T-2)**

3.7.4.2. The AP officer providing centrifuge training will notify the aircrew member's squadron commander in writing of aircrew member's performance, provide the commander a copy of the aircrew's training report, and give recommendations regarding aircrew's continued flying status in HGA.

3.7.4.3. Aircrew members must pass CDAT to continue flying a Type 1 or Type 2 aircraft. **(T-2)**

3.7.4.4. CDAT failures are managed IAW **Chapter 4** and could result in an aircrew member's inability to fly Type 1 or Type 2 aircraft. **(T-2)**

3.7.5. Non-Pipeline Acceleration Training. NPAT is designed for all non-pipeline aircrew to include, but not limited to, U.S. and foreign exchange aircrew, inter-service transfer aircrew, flight test engineers, flight surgeons, AP personnel, and other non-pipeline aircrew. NPAT crew will complete a qualification for either Type 1 or Type 2 aircraft according to their program requirements. **Note:** Flight Surgeons who are currently assigned to a location with Type 1 or Type 2 aircraft must successfully complete NPAT prior to logging hours. **(T-2)**

3.8. Scheduling and Travel Arrangements.

3.8.1. Details for scheduling acceleration training are found in the ETCA. AFPC, ANG, and AFRC are responsible for filling AAT training quotas for their fighter training pipeline aviators.

3.8.2. Foreign Military Sales training will be scheduled through the respective country managers, in coordination with the scheduling office at the AFSAT Squadron, JBSA-Randolph, Texas. Any additional requirements for international students outside of training provided (e.g., transportation, lodging, etc.) will be the responsibility of the International Military Student Office at the centrifuge training location. **(T-3)**

3.8.3. AFPC/DP2ORC will assign a training line number for the aircrew member to attend AAT. Travel orders will be processed by the student's Military Personnel Flight Formal Training Section. **(T-3)**

3.8.4. 342 TRS will schedule students for PAT, RAT, and NPAT as required. **(T-3)**

3.9. Documentation Required to Receive Centrifuge Training. All students must bring a current DD Form 2992, *Medical Recommendation for Flying or Special Operational Duty*, or service/country equivalent, indicating the individual is medically cleared by a qualified flight surgeon or aeromedical examiner. Students who are not medically cleared for flight or special operational duty will not participate in centrifuge training. **(T-1)**

Chapter 4

STUDENT EVALUATION AND REMEDIATION

4.1. Grading Criteria. Students will demonstrate AGSM skill and proficiency at the centrifuge training facility. **(T-2)** Grading is on a two-tiered grading scale: Pass and fail.

4.1.1. "Pass" is assigned when the student makes only minor AGSM performance errors that do not impact overall AGSM effectiveness.

4.1.2. "Fail" is assigned when AGSM performance indicates a significant lack of muscular strength, endurance, technical ability, and/or knowledge. Students who do not successfully complete the first centrifuge training session may be retained for up to 3 working days at home unit cost. If AGSM performance has not progressed to passing criteria after 3 working days, the student will be assigned a failing grade. **(T-2)**

4.2. Debrief Procedures. Students will receive a thorough debrief following each training session by a qualified AP centrifuge flight member, with emphasis on improving each student's AGSM. **(T-2)** The overall debrief will include a review of the aircrew's digital recording with emphasis on the AGSM, written review of AGSM performance documented on AF Form 4293, *Student Activity Record,* and, if warranted, a review with the aircrew on principles of physical fitness designed to increase the individual's G-tolerance and AGSM performance. **(T-2)**

4.3. First Attempt Failure Procedures.

4.3.1. Notification. The AP officer providing centrifuge training will notify the aircrew's commander in writing or by email of the failure and include a copy of the aircrew's training report and recommendations for improvement. Notification of PAT/AAT T-38 failures must be sent to 19AF/A3F (**19AF.AETC.UndergradUPT@us.af.mil**) and AP Lead Command (**aetc.ap.leadcommand@us.af.mil**.) **(T-2)** In addition, AFPC/DP2ORC must be notified within 24 hours of all AAT failures. **(T-2)** AFSAT/DO must be notified within 24 hours of all international student failures. **(T-2)** Schedule retraining within 60-180 days following the first attempt failure. **(T-2)**

4.3.2. Grounding. Aircrew members are not medically grounded following a failed first attempt beyond the recommendation to not fly as an aircrew member for 12 hours following centrifuge training.

4.3.3. Restrictions. There are no automatic restrictions following a first attempt failure. The squadron commander should review the centrifuge training record, consult with the flight surgeon, and an AP officer assigned to the centrifuge before restricting aircrew. OG/CCs, or equivalent, determine a disposition of non-rated aircrew, operations support flyers, or any other individuals assigned aeronautical orders sent to centrifuge training IAW **paragraph 3.1.2** after their first attempt failure. **(T-2)**

4.3.4. Conditioning program. The student's commander, or commander-designated representative, will monitor the student's progress in any physical conditioning program. **(T-3)** Student must be afforded sufficient opportunity to work on their individual conditioning program IAW AF fitness guidance. The commander and flight surgeon will review the aircrew's progress in the conditioning program before scheduling retraining. **(T-3)**

4.3.5. Second Attempt Training. Will be scheduled no earlier than 60 days following the student's first attempt failure. **(T-3) Exception:** Aerospace Medicine Primary, AP officer, AP technician course students may be considered for the second attempt within 60 days. This second attempt training program will be scheduled directly through 342 TRS is 1-3 days in duration, and consists of the following:

4.3.5.1. Review of digital recording and training report from the first training attempt.

4.3.5.2. Review of progress made during individual conditioning program.

4.3.5.3. Academics tailored to the individual's original problem areas.

4.3.5.4. Completion of the required G-training profile IAW the 19 AF syllabus.

4.3.6. Students must pass all profile training during repeat training attempts, regardless of the pass status of some runs during the first training session.

4.4. Second Attempt Failure Procedures.

4.4.1. Notification. The AP officer providing centrifuge training will notify the aircrew's commander in writing or by email of the aircrew's failure to complete retraining. Notification of PAT/AAT T-38 failures must be sent to 19AF/A3F (**19AF.AETC.UndergradUPT@us.af.mil**) and AP Lead Command at **aetc.ap.leadcommand@us.af.mil**. **(T-2)** Notification must include the reasons for the failure and should include any recommendations that might be beneficial in determining the future training ability of the aircrew. **(T-2)** In addition, AFPC/DP2ORC must be notified within 24 hours of all AAT student failures. **(T-2)** AFSAT/DO must be notified within 24 hours of all international student failures. **(T-2)**

4.4.2. Grounding and medical evaluation. Aircrew members are medically grounded pending completion of a medical evaluation by a qualified flight surgeon. **(T-1)** The flight surgeon will determine if there is any underlying pathology that caused or contributed to the failure to complete training. The flight surgeon will provide the results of this evaluation to the unit commander and the MAJCOM Chief Aerospace Medicine (MAJCOM/SGP) or equivalent. **(T-2)** Following satisfactory completion of treatment, if underlying pathology is a factor, recommendation by the attending flight surgeon, and concurrence by the MAJCOM/SGP or equivalent, the aircrew may reattempt without prejudice. If no underlying pathology was discovered, then the remaining procedures in this section will be implemented.

4.4.3. Aircrew Disposition. Aircrew, having failed a second attempt, will undergo an operational review to determine their final disposition. **(T-3)**

4.4.3.1. The aircrew member's OG/CC, or equivalent, will conduct a unit-level operational review. **(T-2)** The purpose of this review is to provide a recommendation to the MAJCOM/A3 or equivalent as to whether a qualified aircrew member should receive a waiver to continue in their assigned MDS. The OG/CC, or equivalent, must consider the aircrew's flying skill and experience and then determine the aircrew's potential to develop into a successful high-G aviator.

4.4.3.2. The owning MAJCOM determines disposition of UPT students that fail a second attempt to complete training. **(T-2)**

4.5. Aircrew Conditioning Program Guidance. Aircrew conditioning will be accomplished IAW applicable syllabi and MAJCOM guidance. (**T-2)**

Chapter 5

CENTRIFUGE OPERATIONS

5.1. Centrifuge Operations and Crew Requirements. AP Lead Command will review centrifuge training courseware prior to implementation into formal training and publish on the AETC Bookstore: **https://trss3.randolph.af.mil/Bookstore/home/homePage.aspx**.

5.1.1. Crew Composition and Qualifications. The minimum centrifuge training crew will consist of an AP officer, lecturer, operator, and crew chief. **(T-2)** A flight surgeon will be placed on-call in conjunction with emergency medicine notification. **(T-2)** The on-call flight surgeon will be notified if emergency medical treatment is required. **(T-2)** If required, Flight Medicine or an appropriate emergency medicine transport team must provide patient transport to a medical treatment facility. **(T-3)**

5.1.2. Emergency Response Procedures. 342 TRS will establish qualification criteria and procedures for all centrifuge crew members. **(T-2)** Detailed procedures will be found in centrifuge training facility Operating Instructions. Qualification documentation will be maintained as part of the training facility instructor folder. **(T-3)**

5.1.3. All centrifuge crew members will maintain currency in responding to medical emergencies in the centrifuge. **(T-2)** At a minimum, the unit will maintain an Automated External Defibrillator for emergency response. **(T-1)** The flight commander of the centrifuge facility will direct emergency reactor training on a quarterly basis. **(T-2)** At least one training session per year will involve a combined response from emergency medicine services and the flight surgeon. **(T-2)** These training sessions will be locally scheduled and documented by each centrifuge training facility. **(T-3)**

5.2. Medical Evaluations for Centrifuge Training. Profile evaluations and medical monitoring for centrifuge medical evaluations will be determined by the attending flight surgeon and approved by a centrifuge assigned AP Officer.

Chapter 6

PROGRAM ADMINISTRATION AND MANAGEMENT

6.1. Program Administration and Reporting.

6.1.1. Documentation of Training. A qualified 13H3 or 1H071 or higher assigned to centrifuge operations will document successful completion of centrifuge training. **(T-3)**. Any 13H3, 1H071 or higher can confirm centrifuge training if they obtain written or telephone verification of date and type of training from the centrifuge training facility prior to documenting on the AF Form 1522.

6.1.2. Documenting Formal Centrifuge Courses**.**

6.1.2.1. AF Form 4293.

6.1.2.1.1. This form will be used to document evaluations of AGSM performance completed during a formal centrifuge course. **(T-3)** See **Attachment 2** for detailed instructions on how to fill out the AF Form 4293.

6.1.2.1.2. All acceleration training AF Forms 4293 will be kept in students' flying training gradebooks. **(T-2)** The member's squadron commander or equivalent requests replacement of misplaced forms. **(T-3)**

6.1.2.2. AF Form 1522.

6.1.2.2.1. This form is used to document training. **(T-2)** See **Attachment 2** for detailed instructions on how to fill out the AF Form 1522. A complete list of course codes can be found in **Table A2.1**.

6.1.2.2.2. Successful completion of centrifuge training for courses will be updated in OTA, as part of the USAF formal training tracking database. **(T-2)**

6.1.3. Documentation of Local Acceleration Training. To document local acceleration training, use AF Form 1522 and the appropriate training codes obtained from aircrew records management personnel. **(T-3)** Examples include but are not limited to: AGSM refresher, HUD tape reviews, or other training.

6.1.4. Reporting Requirements. The centrifuge training facility will provide an end-of-calendar year report to AP Lead Command at **aetc.ap.leadcommand@us.af.mil**. The report will include the following (with anonymity):

6.1.4.1. The number of individuals by MDS and crew position who attended training categorized by training program (e.g., PAT, AAT, RAT). **(T-3)**

6.1.4.2. The number of failures and failure rate by training program, MDS, and crew position. **(T-3)**

6.1.4.3. Injuries or medical problems associated with training, by aircrew MDS. **(T-3)**

6.1.4.4. Synopsis of critique comments. Only include comments directed at the overall program or policies. Comments on the facility or its personnel need not be sent forward. **(T-3)**

6.1.4.5. Specific comments or recommendations by the facility chief regarding program policy or procedures. (**T-3)**

6.2. Digital Recording Management. Formal requests for a release of student recordings require permission from AF/A34P or NGB/A3O as appropriate. The centrifuge facility may provide students with copies of their own training. These reports are Controlled Unclassified Information afforded protection from unauthorized disclosure.

6.3. Individual Records.

6.3.1. Flying units will track qualification centrifuge training in ARTEMIS, or current aviation management database, and in individual flight records IAW AFMAN 11-421, *Aviation Resource Management*. **(T-2)**

6.3.2. The centrifuge training facility will maintain individual aircrew training records and recordings IAW the Air Force Records Disposition Schedule. This will serve as a back-up for flying unit records. **(T-3)**

6.3.3. The individual training reports maintained by the centrifuge facility may be released to the aircrew member, the member's locally assigned Aerospace Physiologist, commander, MAJCOM/A3, MAJCOM Director of Safety (MAJCOM/SE) or MAJCOM/SGP (NGB/SGP for ANG aircrew). Requests for the release of individual training reports to other agencies must be approved by the MAJCOM/A3T or NGB/A3O. **(T-2)** These reports are Controlled Unclassified Information and are afforded protection from unauthorized disclosure.

6.3.4. Local Acceleration Training records will be maintained IAW AFI 33-322 and the AF Records Disposition Schedule. **(T-2)**

CASE A. CUNNINGHAM, Lt Gen, USAF
Deputy Chief of Staff, Operations

Terms

AP Lead Command—AETC is the lead MAJCOM for the Aerospace Physiology Enterprise. Headquarters AETC Aerospace Physiology personnel reside in the Aircrew Performance Division (AETC/A3OA) and are often referred to as AP Lead Command.

G—Applied acceleration expressed as a multiple of the acceleration due to gravity. The value of applied acceleration (a) on a pilot during a maneuver is G = a/g where g is defined as standard gravity or acceleration due to gravity at the Earth's surface (9.81 m/s^2). (Gradwell and Rainford (2016), p.132).

G-Awareness Training—A comprehensive program ensures optimum G-awareness training of high G aircrew. The program consists of physiological and operational training on G-awareness, centrifuge training, and an ongoing continuation training program. This manual addresses only the centrifuge training portion of the G Awareness Program. For information regarding continuation training, please see appropriate MDS AFMANs.

High-G—G-forces 5.0 Gz or greater IAW AFMAN 11-214 para 3.2.

High—G Aircraft (HGA) – HGA are aircraft capable of generating a G-loading in excess of 6.0 Gz. This definition is further divided into the following two categories:

Type 1 Aircraft—Aircraft capable of rapid G-onset rates greater than 6.0 G/sec but are typically not employed above 7.5 Gz. Examples of U.S. military aircraft which meet this definition are the A-10C, T-38A/C and AT-38B.

Type 2 Aircraft—Aircraft capable of rapid G-onset rates greater than 6.0 G/sec and sustained G-loading greater than 5 seconds above 7.5 Gz. Examples of USAF aircraft meeting this definition are the F-15C/E/EX, F-16C/D, F-22A, and F-35A.

Type 1 and 2 Personnel—Any pilot, CSO, flight surgeon, AP personnel, student pilot in the fighter pipeline, other rated/non-rated aircrew, operational support flyer, or any other individuals assigned aeronautical orders assigned to an active flying billet or performing unrestricted flight in a Type 1 or Type 2 aircraft, respectively.

Attachment 2

AP FORMS AND COMPLETION STANDARDS

A2.1. General. This attachment provides guidance for the completion of forms required to document acceleration training.

A2.2. AF Form 4392.

A2.2.1. Prior to training, create a form for each student. In the "Name of Student" block, annotate the students rank, last name, and first name. In the "Class" block, annotate the type of training course (i.e. Primary, Advances, etc.). Complete the "Date" block with the date of training. Ensure the correct Centrifuge Profiles and Gz Onset Rate is annotated on the top portion of each student's form.

A2.2.2. During each training profile, the AP officer (APO) will annotate the light loss reported by the student. Show the student a chart like **Figure A2.1** as a guide to reporting the percentage of both peripheral and central vision lost during each profile. The APO will also mark the areas needing improvement for each profile run under the "Performance" section (i.e. GLOC, Upper Body, etc.). **Note:** Be specific about what needs improvement. See **Figure A2.2** for an example of a correctly completed AF Form 4392.

A2.2.3. After completing all training profiles, the APO will annotate performance recommendations and areas discussed during the debrief under the "Recommendations for Improvement / Debrief" section.

A2.2.4. Lastly, the APO will evaluate the students' performance by determining if they passed or failed, annotate outcome accordingly, and print and sign their name.

A2.3. AF Form 1522. Units will maintain copies of completed AF Forms 1522 IAW the AF Records Disposition Schedule. Complete the form fields as follows: 1) Last Name- include, at a minimum, first name, last name, and middle initial, 2) Aircrew Signature- self-explanatory, 3) SSN- must be filled in with the member's DoD ID number, 4) Unit- self-explanatory, 5) Event Description- must contain the Formal Course ID Code from **Table A2.1.**, 6.) Task ID- leave blank, 7) Date Accomplished- enter the date training is completed, 8) Certification- if not digitally signed, include printed name and signature. **Note:** When documenting NPAT, annotate the Formal Course ID, profile type (Type 1 or Type 2), and G-level qualification in the Event Description block. See **Figure A2.2** for an example.

Table A2.1. Acceleration Training Task ID codes.

Formal Course ID	Training Course
S-O-B/A-APC-P	Initial Centrifuge (Primary Acceleration Training)
S-O-B/A-APC-A	Qualification Centrifuge (Advanced Acceleration Training)
S-O-B/A-APC-R	Refresher Centrifuge (Refresher Acceleration Training)
S-O-B/A-APC-C	Commander Directed Centrifuge Acceleration Training

S-O-B/A-APC-O	Other Centrifuge (Foreign Exchange, Inter-Service, Non-Pipeline)

Figure A2.1. Centrifuge Light Loss Chart.

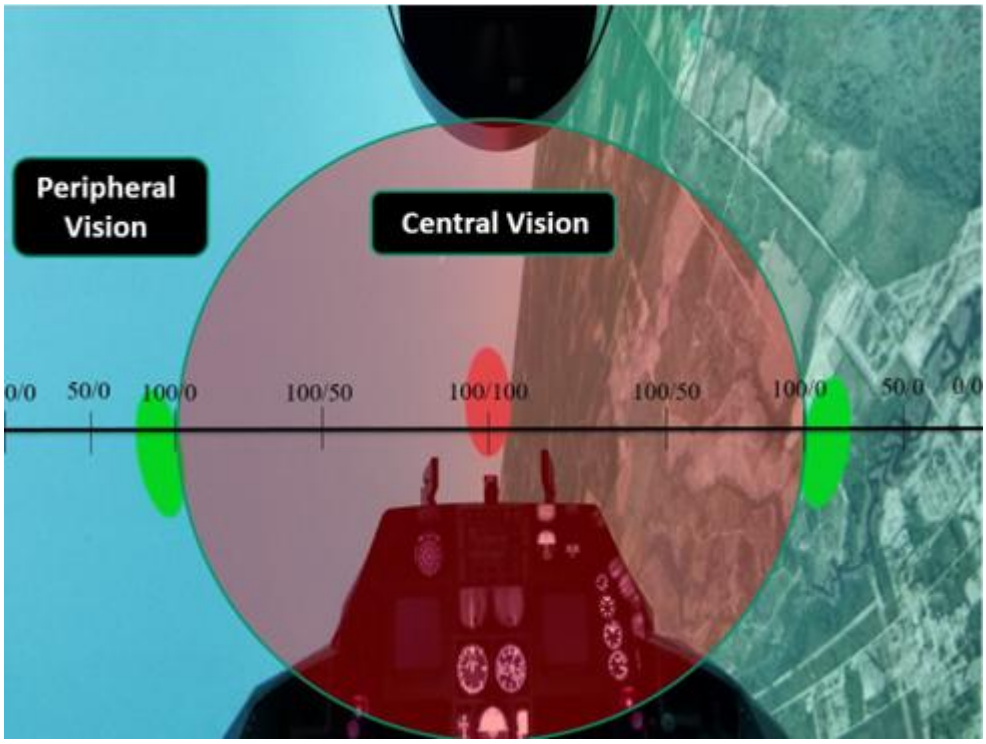

Figure A2.2. Completed AF Form 4293 Example.

STUDENT ACTIVITY RECORD

NAME OF STUDENT (*Last, First, Middle Initial*)			CLASS
O-3 Snuffy, Johnny O.			Primary
DATE	**ACTIVITY**		
20250806	CENTRIFUGE PROFILES	ONSET PER SEC (Gz)	% LIGHT LOSS: PERIPHERAL/CENTRAL
	1. Resting Tolerance	0.1	4.2 / 5.4
	2. 4G/15 Sec	6.0	0 / 0
	3. 5G/30 Sec	6.0	0 / 0
	4. 7.5G/15 Sec	6.0	50 / 0
	5. 7G SACM	6.0	1.50 / 0 2.0 / 0 3.0 / 0
	6. 7G SACM	6.0	Peak 1.50 / 0
	7.		2.0 / 0
	8.		3.0 / 0
		PERFORMANCE	4.100 / 0 -> 50 / 0
	1. _ Upper-body	_ Lower-body	_ Breathing _ GLOC
	2. _ Upper-body Settle in	_ Lower-body	air low / abs out _ Breathing softer "K"/don't force it GLOC
	3. _ Upper-body open mouth	_ Lower-body	lock it in _ Breathing prep was high/large GLOC
	4. _ Upper-body relax face	_ Lower-body	pumping abs _ Breathing _ GLOC
	5. _ Upper-body jaw	_ Lower-body	knees _ Breathing more in _ GLOC
	6. _ Upper-body relax face	_ Lower-body	_ Breathing hold your breath GLOC
	7. _ Upper-body	_ Lower-body	_ Breathing _ GLOC
	8. _ Upper-body	_ Lower-body	_ Breathing _ GLOC

RECOMMENDATIONS FOR IMPROVEMENT / DEBRIEF

****Maintain G-performance strength/endurance conditioning IAW AFPAM 11-419 Attachment 2****

-Maintain a relaxed upper body. Allow the shoulders and jaw to drop.

-Softer on the phonetic "k" and actively pull air back in. Pull the prep in low using the diaphragm and brace the abs. Do not pump them during air exchanges.

-Keep your mouth open, do not clamp down. Control the air with the glottis not your lips.

CENTRIFUGE TRAINING STANDARD

(PASS) Student makes only minor AGSM performance errors that do not impact overall AGSM effectiveness.

FAIL AGSM performance indicates significant lack of muscular strength, endurance, technical ability and/or knowledge.

Aerospace Physiologist: Capt Jane Doe Signature: Jane Doe
