BY ORDER OF THE COMMANDER
AIR COMBAT COMMAND

AIR COMBAT COMMAND MANUAL
11-2CAP-USAF, VOLUME 1

26 MAY 2023

Flying Operations

CAP-USAF AIRCREW TRAINING

COMPLIANCE WITH THIS PUBLICATION IS MANDATORY

ACCESSIBILITY: This publication is available for downloading or ordering on the e-Publishing website at **www.e-Publishing.af.mil**.

RELEASABILITY: There are no releasability restrictions on this publication.

OPR: CAP-USAF/DO

Certified by: ACC/A3T
(Mr. John Costa)

Supersedes: ACCMAN 11-2CAP-USAFV1, 13 March 2019

Pages: 20

This manual implements AFPD 11-2, *Aircrew Operations*. It applies to all individuals assigned and attached to Civil Air Patrol-United States Air Force (CAP-USAF). It does not apply to the United States Space Force, Air Force Reserve or Air National Guard units. This manual establishes the minimum standards for training and qualifying active duty and civil service performing duties in aircraft operated by CAP-USAF regardless of type. This publication requires the collection and/or maintenance of information protected by the Privacy Act of 1974 authorized by Title 10 United States Code (USC), Section (§) 9013, *Secretary of the Air Force*. The applicable System of Records Notices (SORN) F011 AF XO A, Aviation Resource Management System (ARMS) membership programs is available at **https://dpcld.defense.gov/privacy/SORNS.aspx**. Ensure all records generated as a result of processes prescribed in this publication adhere to AFI 33-322, *Records Management and Information Governance Program*, and are disposed of IAW the Air Force Records Disposition Schedule, which is located in the Air Force Records Information Management System. Submit recommended changes and questions about this publication to CAP-USAF Director of Operations (CAP-USAF/DO) using the DAF Form 847, *Recommendation for Change of Publication*. Route DAF Forms 847 from the field through the appropriate functional chain of command IAW DAFMAN 90-161, *Publishing Process and Procedures*. This publication may not be supplemented or further implemented or extended. Civil Air Patrol-United States Air Force Commander (CAP-USAF/CC) is the waiver authority for non-tiered requirements in this manual. Submit requests for waivers through the chain of command to the publication OPR. The use of the name or mark of any specific manufacturer, commercial product, commodity, or service in this publication does not imply endorsement by the DAF.

SUMMARY OF CHANGES

This document has been substantially revised and must be completely reviewed. This revision significantly changes the semi-annual continuation training requirements, senior officer qualifications, and adds a delineation between mission ready (MR) and basic aircraft qualification (BAQ) for CAP-USAF pilots. All references to other regulatory guidance have been updated as well.

Chapter 1

GENERAL GUIDANCE

1.1. Responsibilities.

1.1.1. Air Combat Command Director of Operations (ACC/A3):

1.1.1.1. process all change requests.

1.1.1.2. review subordinate unit training programs.

1.1.2. CAP-USAF Director of Operations (CAP-USAF/DO):

1.1.2.1. develops specific training objectives to meet the requirements of this instruction, reviews programs to ensure training objectives are met, assists detachments in management of training programs, and provides necessary staff support; and

1.1.2.2. performs the responsibilities of the Detachment Commander (Det/CC) identified in this instruction for aircrew assigned or attached to CAP-USAF/HQ; and

1.1.2.3. identifies training shortfalls; and

1.1.2.4. certifies trained and qualified individuals to functional pilot (FP), mission pilot (MP) and instructor pilot (IP) status; and

1.1.2.5. ensures pilots complete additional certification training to meet valid mission requirements.

1.1.3. Detachment Commanders (Det/CCs):

1.1.3.1. ensures adequate continuity and supervision of individual flying training needs and proficiency of assigned and attached pilots; and

1.1.3.2. reviews flying training and evaluation records of assigned pilots via Patriot Excalibur (PEX); and

1.1.3.3. monitors assigned pilot currency requirements.

1.1.4. Individual pilots:

1.1.4.1. completes training requirements and currencies within the guidelines of this instruction; and

1.1.4.2. participates only in sorties for which they are certified and current.

1.2. Training Phases:

1.2.1. Initial Qualification Training (IQT). This training is necessary to qualify pilots for flying CAP-USAF aircraft. Successful completion of IQT results in qualifications of either MP or FP designation. See **Chapter 2** for IQT program requirements.

1.2.2. Mission Qualification Training (MQT). This training is necessary for qualified pilots to become familiar in CAP-USAF's mission overseeing the Cooperative Agreement between the Air Force and Civil Air Patrol (CAP). Flying training will consist of Search and Rescue (SAR) and Disaster Response (DR) training similar to that of CAP.

1.2.3. Continuation Training (CT). This training is necessary for qualified pilots to maintain their level of proficiency and currency. It provides minimum ground and flight training requirements. See **Chapter 3** for CT program requirements. See **Attachment 2** for descriptions of sorties and events.

1.2.4. Specialized Training. This training is necessary to carry out CAP-USAF assigned missions but is not required of every crew member. Individuals identified by the Det/CCs will accomplish appropriate training in specialized areas or comply with CAP-USAF/DO training programs. See **Chapter 5** for specialized training program requirements.

1.3. Training Records and Reports. CAP-USAF Director of Training (DOT) will maintain pilots' training folders and records for individual training and evaluations.

1.3.1. All training and evaluation records will be maintained in PEX or a suitable electronic alternative. Hard copy Flight Evaluation Folders (FEF) will be maintained at CAP-USAF/HQ as a backup.

1.3.2. Additional certifications will be documented on an AF Form 4348, *USAF Aircrew Certifications*; IAW AFMAN 11-202, Volume 2, *Aircrew Standardization and Evaluation Program*; and placed in the individual's FEF.

1.4. Aircrew Graduate Evaluation Program. Aircrew Graduate Evaluation Program surveys are not required for any CAP-USAF courses.

1.5. Letter of Certifications (LoX). CAP-USAF/DOT will maintain a LoX (also referred to as the Letter of Xs) for all CAP-USAF pilots assigned and attached for flying. The LoX will be maintained and updated in PEX. Updates to the LoX will be made once all required training has been accomplished and documented in the individual's electronic training folder in PEX. Validation for each certification will be documented on the individual's Air Force Form 4348.

Chapter 2

INITIAL QUALIFICATION TRAINING (IQT)

2.1. General:

2.1.1. This chapter outlines the IQT requirements for all CAP-USAF pilots. Pilots will:

2.1.1.1. be qualified as "FP" or "MP" upon completion of this training, in accordance with DAFMAN 11-401, *Aviation Management* and ACCMAN 11-2CAP-USAF, Volume 2, *CAP-USAF Aircrew Evaluation Criteria*.

2.1.1.2. The IQT course can be initiated at the detachment and completed at CAP-USAF/HQ Maxwell AFB or completed in its entirety at CAP-USAF/HQ.

2.1.1.3. Pilots undergoing IQT will receive ground and flight instruction with a minimum of interruption. IQT will be completed no later than (NLT) 120 days after reporting for duty (180 days for reservists on flying status). Det/CCs may extend this deadline by 60 days. The CAP-USAF/DO is the waiver authority for further training time extensions.

2.1.1.4. IQT is considered complete after successful completion of an instrument and qualification evaluation. At the completion of IQT, the CAP-USAF/DO will assign the pilot to BAQ status IAW AFMAN 11-202, Volume 1, *Aircrew Training*, via AF Form 4324, *Aircraft Assignment/Aircrew Qualification Worksheet*.

2.2. Prerequisites. Before beginning IQT, pilots must comply with the syllabus prerequisites. Before flying, all pilots will meet the physical examination and physiological training requirements in AFMAN 11-202V1.

2.3. Ground Training. Ground training will follow the appropriate IQT syllabus. Detachments will obtain and use the most current courseware and syllabi from CAP-USAF/DOT. Pilots will complete the grounding requirements listed in **Table 4.1** before flying in CAP-USAF aircraft.

2.4. Flying Training. Pilots in IQT will fly under IP supervision until completing the instrument and qualification evaluation. IQT syllabus mission objectives and tasks are minimum requirements. Any minimum requirement not affecting basic mission capable (BMC) qualification, which is not accomplished during training, will be annotated on the member's AF Form 8, *Certificate of Aircrew Qualification*, IAW AFMAN 11-202V2. Additional training due to student non-progression is available only within the constraints of the IQT syllabus.

2.5. Senior Officer Qualification. Accomplish senior officer IQT according to DAFMAN 11-401, AFMAN 11-202V1, this manual, and the appropriate IQT syllabus. For guidance on general officers in BAQ status, refer to AFMAN 11-202V1, paragraph 2.7.2.

2.6. Flight Surgeon (FS) Training. FS training will be conducted according to AFMAN 11-202V1. FS training will consist of the following training requirements:

2.6.1. Emergency procedures review with an IP.

2.6.2. Cockpit/crew resource management (CRM) training IAW AFMAN 11-290, *Cockpit/Crew Resource Management and Threat & Error Management Program*.

2.6.3. Aircrew flight equipment (AFE) and procedures training according to AFI 11-301, Volume 1, *Aircrew Flight Equipment (AFE) Program*.

2.6.4. Egress training (non-ejection seat) according to AFI 11-301V1.

2.6.5. Upon completion of ground training, a FS may occupy any seat except the front left. A FS will not operate the controls unless a qualified pilot is at the other set of controls and will not fly during critical phases of flight.

2.7. Loss of Qualification and Requalification Training. The following conditions result in pilot loss of qualification:

2.7.1. Commander-directed requalification IAW AFMAN 11-202V2. Requalification will be accomplished through a commander-directed series of flights and/or ground training events.

2.7.2. Expiration of qualification evaluation. Follow requalification guidance from AFMAN 11-202V2, paragraph 2.2.

2.7.3. Failing a flight evaluation. To regain qualification, the pilot must successfully complete a flight evaluation per ACCMAN 11-2CAP-USAFV2.

2.7.4. Failing a qualification written examination. To regain qualified status, the pilot must successfully re-accomplish the written examination per ACCMAN 11-2CAP-USAFV2.

2.7.5. Loss of landing currency exceeding 180 days according to **paragraph 4.6.3.3** See requalification requirements in **paragraph 4.6** and AFMAN 11-202V1.

2.7.6. See AFMAN 11-202V1, and ACCMAN 11-2CAP-USAFV2, for requalification requirements for all pilots. A flight evaluation is required to complete the requalification process.

2.8. Multiple Qualification.

2.8.1. For the purposes of this instruction, all CAP-USAF aircraft are considered a single USAF mission design series (MDS) equivalent. Additional aircraft certifications may be required according to **Chapter 4**.

2.8.2. Pilots qualified in any other aircraft who complete a multiple qualification in CAP-USAF aircraft will comply with requirements in this chapter when operating under CAP-USAF flight authorizations.

2.9. Orientation and Indoctrination Flyer Training. IAW DAFMAN 11-401, orientation and indoctrination flyers will accomplish the following training with a CAP-USAF IP:

2.9.1. Emergency procedures review.

2.9.2. Egress training (non-ejection seat) according to AFI 11-301V1.

2.9.3. Aircraft systems (Indoctrination Flyers Only)

Chapter 3

MISSION QUALIFICATION TRAINING (MQT)

3.1. General. The purpose of MQT is to prepare CAP-USAF pilots for performance of duties in support of their CAP oversight mission. Pilots will complete MQT within 60 days (120 days for Reservists) of IQT completion. Det/CCs may extend this deadline by 30 days. The CAP-USAF/DO is the waiver authority for further training time extensions. At the completion of MQT, the CAP-USAF/DO will assign the pilot to MR status IAW AFMAN 11-202V1.

3.2. Ground Training. The ground training portion of MQT will primarily be conducted after the completion of IQT at CAP-USAF/HQ. Training will focus on CAP Familiarization and performance of the oversight mission.

3.3. Flying Training. The flying training portion of MQT will primarily be conducted at the assigned unit IAW the CAP-USAF/DO-approved syllabus. MQT can also be completed at both Detachment-level and HQ-level flight clinics. Training will focus on:

3.3.1. Local Area Orientation,

3.3.2. CAP Mission Familiarization, to include SAR and DR, and

3.3.3. Mountainous Flying Familiarization (as required by duty location).

Chapter 4

CONTINUATION TRAINING (CT)

4.1. General. This chapter outlines the minimum training and currencies required for CAP-USAF pilots following Qualification Training (QT).

4.2. Training Cycle. There are two semiannual training cycles: 1 January to 30 June, and 1 July to 31 December.

4.3. Ground Training Requirements. Table 4.1 summarizes CAP-USAF pilot ground training requirements. For ground training prescribed by other instructions, refer to those instructions for the latest requirement. Initial ground training accomplished during QT may be credited toward CT requirements for the training cycle in which it was accomplished.

Table 4.1. Pilot Ground Training Requirements.

ITEM	A Subject	B Frequency	C Prescribing Instruction	D Grounding
1	training	Once per base	AFI 11-301V1, as supplemented	Yes
2	Aircrew flight equipment training	Every 12 months		
3	Emergency egress training (non-ejection seat)	Every 12 months		
4	BOLDFACE Aircrew flight equipment familiarization Examination	Prior to first flight of each month	AFMAN 11-202V2	
5	Situational emergency procedures training (SEPT) (Note 1)	Every 12 months	ACCMAN 11-2CAP-USAFV1	
6	CRM Training	Every 24 months	AFMAN 11-290, as supplemented	No
7	Anti-hijacking training	Every 2 years	AFI 13-207-O	

Notes:

1. Leading a SEPT group session satisfies annual SEPT requirement for the IP administering the training. SEPT may also be accomplished in-flight, in a static aircraft, or in a cockpit trainer.
2. IAW Air Combat Command Personnel Rescue Training Branch (ACC/A3JT) concurrence, CAP-USAF pilots are no longer required to complete SS01, SS04 or SS05 as part of CT requirements, but may take the courses if available. A copy of the approval is on file at CAP-USAF/HQ. A general overview of each course will be briefed during IQT for familiarization.

4.4. Flying Training Requirements. All pilots will accomplish the applicable requirements in **Table 4.2** Refer to **Attachment 2** for requirements to log sorties and events.

Table 4.2. Flying Training Requirements.

ITEM	Flight Mission/Sortie Semi-Annual Requirements				
	MISSION	TASK ID	MR	BAQ	NOTES
	PRIMARY AIRCRAFT PROFICIENCY				
1	Visual Flight Rules (VFR) Sortie	VFR	4	4	1
2	Instrument (INST) Sortie	INST	2	2	1
3	Navigation (NAV) Sortie	NAV	1	1	2
4	Night Sortie	NGT	2		3
5	Simulated Forced Landing (SFL) Sortie	SFL	1		4, 5
	PRIMARY CAP MISSIONS FAMILIARIZATION (FAM)				
6	CAP FAM	FAM	1		2, 3, 6
	Notes: 1. VFR and INST maneuvers should be accomplished in one sortie to log the task. ***The intent is for pilots to methodically plan, execute, and debrief a sortie based on the required maneuvers***. 2. Can be dual-logged with VFR or INST sortie if all requirements met. 3. Can be dual-logged with INST or NAV sortie if all requirements met. 4. Must be flown annually with a certified CAP-USAF SFL IP. 5. Only one SFL sortie is required annually. 6. Sorties flown in MQT can be logged as CAP FAM sorties.				

4.5. Failure to Complete Requirements. Pilots who fail to accomplish any CT requirement listed in **Table 4.2** will not fly in the new training cycle until a review is completed to determine the cause. The non-current pilot's Det/CC, or the CAP-USAF/DO will accomplish the following:

4.5.1. Review the cause, determine the pilot's additional training requirements in the new training cycle, and document the contributing factors and required training on a Memorandum for Record in the pilot's training folder.

4.5.1.1. The minimum additional training must include accomplishment of at least one of each type of overdue sortie or event, flown under the supervision of a CAP-USAF IP.

4.5.2. See **paragraph 4.9** for guidance on prorating requirements.

4.6. Flying Training Currencies. **Table 4.2** defines pilot semi-annual CT requirements. Refer to **Attachment 2** for guidance on logging sorties and events for CT. Flying currency (recency and lookback) requirements are defined in **Table 4.3**.

4.6.1. Any pilot not meeting currency requirements (recency or lookback) will not perform a sortie or event except under the supervision of an IP.

4.6.2. Any IP not meeting currency requirements (recency or lookback) in an event or sortie that does not affect BAQ, will not instruct in that event or sortie until the required currency is regained under the supervision of a current and appropriately certified IP.

4.6.3. Loss of landing currency affects BAQ and requires the following actions to regain currency or qualification. (**Note:** Timing starts from date of last landing.)

4.6.3.1. For 91 through 135 days, regain landing currency by accomplishing three landings, including a no-flap and full-flap landing under the supervision of a current IP.

4.6.3.2. For 136 through 180 days, perform the same action as in **paragraph 4.6.3.1** plus an instructor-supervised normal and emergency procedures review session.

4.6.3.3. For greater than 180 days, accomplish basic aircraft requalification training according to AFMAN 11-202V1 and ACCMAN 11-2CAP-USAFV2.

4.6.4. If instrument approach currency is lost, pilots will not fly instrument approaches until currency is regained by flying a precision and a non-precision instrument approach with a current IP.

4.6.5. The Garmin G-1000 is considered to be the base model avionics package with respect to CAP-USAF operations.

4.6.5.1. For a pilot to fly in Instrument Meteorological Conditions (IMC) in any non-G-1000 avionics variant, they must first fly a sortie in that variant with a qualified CAP or CAP-USAF pilot acting as a safety observer. This sortie will consist of one Precision and one Non-Precision approach and will be logged off by the CAP-USAF/DOT in the member's PEX training folder prior to a solo flight in IMC conditions.

4.6.5.1.1. A variant is defined as an avionics suite that differs from the G-1000 integrated system. A round dial aircraft is not considered a variant if the gauges are located in different positions.

4.6.5.1.2. When flying the training sortie, accomplish one approach using round dials and the other approach using the installed GPS system.

Table 4.3. Pilot Currencies (Recency and Lookback).

ITEM	Currency Item	Recency	90-Day Lookback	Affects BAQ
1	Landing	90 days	3	Yes
2	Night landing (Note 1)	90 days	3	No
3	Instrument approach	90 days	1	No

Note:

1. Credits landing currency.

4.7. Flight Surgeon (FS) Requirements. Accomplish FS requirements IAW AFMAN 11-202V1, Table 1 Flight Surgeon Sortie Requirements.

4.8. Indoctrination Flier Requirements. Every 12 months, indoctrination fliers will complete a ground training program with a CAP-USAF IP to include a review of aircraft systems, emergency procedures, and egress training according to AFI 11-301V1. Indoctrination fliers are exempt from other annual flying requirements.

4.9. Prorating Requirements. CAP-USAF/DO may prorate training requirements at the end of the training cycle if a pilot was unavailable for flying duties. The CAP-USAF/DO may consider the member's involvement in a training program, extended periods of adverse weather, or periods when aircraft were unavailable for normal use more than 15 consecutive days.

Chapter 5

SPECIALIZED TRAINING

5.1. General. The training programs in this chapter provide training which allows CAP-USAF pilots to familiarize themselves with CAP flying operations and programs.

5.1.1. The CAP-USAF/DO must approve entry into all qualification and certification training programs in this chapter.

5.1.2. Certification training will be conducted by an appropriately certified CAP or CAP-USAF IP.

5.1.3. Certifications remain valid for pilots completing requalification within 10 months of losing CAP-USAF MDS qualification. Pilots requiring recertification in a different make, model or type will complete a minimum of one VFR and one INST sortie with a CAP-USAF IP. The two sorties can be flown as a single sortie as long as all sub-requirements are met.

5.2. Additional Aircraft Equipment Certification Training. Pilots require additional certifications to operate an aircraft if it is a different aircraft model and/or manufacturer than current certifications listed on the pilots AF Form 4348.

5.2.1. Pilots will also require certifications for the following categories:

5.2.1.1. Retractable Gear

5.2.1.2. Seaplane

5.2.1.3. Turbocharged Engine

5.2.1.4. Fixed Pitch Propeller

5.2.1.5. Snow Ski Landing Configuration

5.2.2. Certification training will consist of a CAP-USAF/DO-approved syllabus with emphasis on aircraft systems, normal operations, and emergency procedures.

5.3. Instructor Pilots (IP) Training. IP training qualifies pilots to perform instructor duties in CAP-USAF aircraft. Pilots must have a minimum of 50 hours as a mission pilot in CAP-USAF aircraft and be recommended by their Det/CC prior to starting IP training. The primary method of completing IP training is to complete the CAP-USAF/DO-approved IP training course at Maxwell AFB. IP training is considered complete after successful completion of an initial or requalification instructor evaluation according to ACCMAN 11-2CAP-USAFV2. Pilots who complete IP training may instruct any specialized training programs for which they are certified.

5.4. Simulated Forced Landing Instructor Certification. The primary method of completing SFL IP certification is to complete the CAP-USAF/DO-approved IP training syllabus in conjunction with the CAP-USAF SFL IP syllabus. Completion of the SFL IP syllabus allows the pilot to act as an instructor for the annual SFL sortie requirement. Any qualified instructor can provide instruction on SFLs for all other sorties.

5.4.1. To remain current as an SFL IP, pilots must:

5.4.1.1. Accomplish an annual ground training refresher course

5.4.1.2. Fly a minimum of one SFL sortie every semi-annual period.

5.5. Civil Air Patrol (CAP) Mission Training. Each CAP mission certification (Glider, Glider Tow, Balloon, etc.) requires specialized training. For a CAP-USAF pilot to receive certification in a CAP mission set, they must accomplish all CAP or Federal Aviation Administration (FAA) ground/flight training for that event, to include the CAP certification requirements. Once training is complete, documentation of the training must be annotated in the pilot's training folder in PEX. CAP-USAF/DOT will update the pilot's Letter of X and AF Form 4348. Yearly accomplishment of CAP Mission Training is encouraged to support CAP oversight.

DAVID B. LYONS, Maj Gen, USAF
Director of Operations

Terms

Air Force aircraft—U.S. Government aircraft under USAF jurisdiction (DAFMAN 11-401).

Aircraft Model—an aircraft manufacturer's designation for an aircraft grouping with similar design or style of structure. The aircraft model is listed in the aircraft type certificate and distinguishes a particular aircraft.

CAP-USAF aircraft—an aircraft under a contract rental agreement between CAP and CAP-USAF or under contract with an Air Force Aero Club or civilian provider; flown by a CAP-USAF pilot IAW USAF regulations.

CAP—USAF IP—qualified IP assigned or attached to CAP-USAF. With CAP-USAF/CC approval, a contracted FAA Certificated Flight Instructor (CFI) or Certificated Flight Instrument Instructor (CFII) may perform CAP-USAF IP duties to accomplish CAP-USAF training requirements. Refer to DAFMAN 11-401. **Note:** The CAP Cooperative Agreement and Statement of Objectives enable CAP-USAF to use appropriately certified CAP members to perform CFI/CFII duties.

Emergency Descent—Maneuver to descend as rapidly as possible for an emergency landing. For training, the maneuver is begun no lower than 2000 feet (ft) Above Ground Level (AGL) and terminated no lower than 1000ft AGL unless the maneuver is performed over a runway and the aircraft is in a safe position to land.

G-1000—aircraft operated by CAP-USAF that has the glass cockpit configuration. The certification following G-1000 training.

Government aircraft—aircraft owned, operated or leased by the U.S. Government (DAFMAN 11-401).

High SFL—Maneuver begun at a minimum of 2000 ft AGL to a safe landing on a prepared surface.

Lookback—look back at the rate of flying experience over a specified period of time. Lookback computations start after the first full lookback period following completion of QT.

Public aircraft—aircraft used only for the U.S. Government.

Short Field Landing—when airfield length or obstructions require maximum aircraft performance to safely land the aircraft.

Short Field Takeoff—when airfield length or obstructions require maximum aircraft performance to safely depart the aircraft.

Simulated Forced Landing—Flying training maneuver using idle or near idle power to simulate engine power loss and terminating with a landing on a prepared surface.

Soft Field Landing—a landing on a runway that is not paved.

Soft Field Takeoff—a takeoff from a runway that is not paved.

Zone 2 SFL—Maneuver begun from a minimum of 800 AGL designed to bring the aircraft to a safe landing in the runway environment from the upwind leg of initial takeoff. If conditions allow, IPs may begin the maneuver below 800 AGL (no lower than 600 AGL). Do not descend below 100 AGL if the aircraft is not in a safe position to land. Minimum runway length for this maneuver is 4500 feet.

Zone 3 SFL—Maneuver begun while on the crosswind leg prior to the downwind turn designed to bring the aircraft to a safe landing in the runway environment from the crosswind leg of initial takeoff. Do not descend below 100 AGL if the aircraft is not in a safe position to land.

Zone 4 SFL—Maneuver begun while on the downwind leg designed to bring the aircraft to a safe landing in the runway environment from the downwind leg of initial takeoff. Do not descend below 100 AGL if the aircraft is not in a safe position to land.

Attachment 2

MISSION DESCRIPTIONS

A2.1. Primary Aircraft Proficiency.

A2.1.1. VFR Sortie—All sub-requirements should be completed in the same flight to log the task. Approximately 1.5 hours.

A2.1.1.1. a. All area maneuvers

A2.1.1.1.1. a. L & R steep turns

A2.1.1.1.2. b. Power on Stall (Either straight ahead or turning)

A2.1.1.1.3. c. Power off Stall

A2.1.1.1.4. d. Slow Flight (Choose one configuration)

A2.1.1.2. b. SFL (Should log 2 each of Zone 2, Zone 3, Zone 4 and High over the course of the year.)

A2.1.1.2.1. d. Short Field takeoff and landing

A2.1.1.2.2. e. Soft Field takeoff and landing

A2.1.1.2.3. f. Partial-Flap landing

A2.1.1.2.4. g. No-Flap landing

A2.1.2. INST Sortie – All sub-requirements should be completed in the same flight to log the task. Approximately 1.5 hours.

A2.1.2.1. a. A minimum of two approaches. At least one of each (Precision and Non-Precision) must be flown and at least one should be attempted utilizing only raw data and/or autopilot off. The use of vision restricting devices is authorized and encouraged in VMC conditions with a safety observer in the opposite seat.

A2.1.2.2. c. Missed Approach

A2.1.2.3. d. Circling

A2.1.2.4. e. Holding – For this requirement, the holding portion should be accomplished by establishing a user created holding pattern at a random fix.

A2.1.3. NAV Sortie – Can be dual logged with INST sortie if all requirements met.

A2.1.3.1. Approximately 2.5 hours

A2.1.3.2. a. G-1000 Cross-country – must be greater than 50 nautical miles from the departure field. Shall primarily focus on use of G-1000 and ForeFlight for mission planning/navigation.

A2.1.4. SFL Sortie – Annual requirement to be flown with a CAP-USAF SFL IP IAW CAP-USAF/DO-approved syllabus. Approximately 1.5 hours.

A2.1.5. Night Sortie – Can be dual logged with INST Sortie and/or NAV sortie if all requirements are met. Should not be planned in conjunction with a VFR sortie unless area work can be accomplished during daylight hours.

A2.1.5.1. a. Must include a minimum of 3 takeoffs, 3 landings (Full Stop or Touch and Go), and an arrival to an airfield. Reentry to the same airfield from beyond 5 nautical miles is acceptable to accomplish an arrival.

A2.1.6. CAP Familiarization Sortie – Sortie practicing a minimum of two types of the following search patterns and use of the Rotheta (RT)-600 Direction Finder System (if installed).

A2.1.6.1. a. Creeping Line Search

A2.1.6.2. b. Expanding Square Search

A2.1.6.3. c. Sector Search

A2.1.6.4. d. Grid Search
