AIR COMBAT COMMAND

AIR COMBAT COMMAND MANUAL
11-2EC-130H, VOLUME 1

19 MARCH 2025

Flying Operations

EC-130H AIRCREW TRAINING

COMPLIANCE WITH THIS PUBLICATION IS MANDATORY

ACCESSIBILITY: This publication is available for downloading or ordering on the e-Publishing website at **www.e-Publishing.af.mil**.

RELEASABILITY: There are no releasability restrictions on this publication.

OPR: ACC/A3CR
Certified by: ACC/A3C
Supersedes: 11-2EC-130HV1, 21 January 2022
Pages: 73

This publication implements Air Force Manual (AFMAN) 11-202, Volume 1, *Aircrew Training*. It establishes USAF aircrew training policy for all EC-130H COMPASS CALL aircraft and aircrew. It is used in conjunction with AFMAN 11-202V1 and Major Command (MAJCOM) supplements. This publication applies to all Regular Air Force COMPASS CALL units on active duty. This publication does not apply to Air Reserve Component (ARC) units or the USSF. This publication requires the collection and or maintenance of information protected by the Privacy Act of 1974 authorized by Title 10 United States Code (USC), Section (§) 9013, *Secretary of the Air Force.* The applicable System of Records Notice F011 AF XO A, Aviation Resource Management System (ARMS) is available at: **https://pclt.defense.gov/DIRECTORATES/Privacy-and-Civil-Liberties-Directorate/Privacy/SORNs/**. Ensure all records generated as a result of processes prescribed in this publication adhere to Air Force Instruction (AFI) 33-322, *Records Management and Information Governance Program*, and are disposed of in accordance with the Air Force Records Disposition Schedule located in the Air Force Records Information Management System. Refer recommended changes and questions about this publication to the Office of Primary Responsibility (OPR) using the Department of the Air Force (DAF) Form 847, *Recommendation for Change of Publication*; route DAF Forms 847 from the field through the appropriate functional chain of command. This publication may be supplemented at any level, but all Supplements must be routed to the OPR of this publication for coordination prior to certification and approval. The authorities to waive wing or unit level requirements in this publication are identified with a Tier ("T-0, T-1, T-2, T-3") number following the compliance statement. See Department of the Air Force Manual (DAFMAN) 90-161, *Publishing Processes and Procedures*, Table A10.1, for a description of the authorities associated with the Tier numbers. Submit requests for waivers through the chain of command to the appropriate Tier waiver approval authority, or alternately, to

ACC/A3 for non-tiered compliance items. The use of the name or mark of any specific manufacturer, commercial product, commodity, or service in this publication does not imply endorsement by the DAF.

SUMMARY OF CHANGES

This document has been substantially revised and needs to be completely reviewed. Major changes include transition from a 12-month to 24-month Ready Aircrew Program cycle and the removal of Weapon System Officer and Mission Commander qualification references.

Chapter 1

GENERAL GUIDANCE

1.1. References, Abbreviations, Acronyms, Terms, and Addresses. See **Attachment 1**.

1.2. Roles and Responsibilities.

1.2.1. Air Combat Command (ACC) Director of Operations (ACC/A3) is designated as the responsible agency for this volume in accordance with (IAW) Air Force Policy Directive (AFPD) 11-2, *Aircrew Operations*. ACC/A3 will:

1.2.1.1. Chair annual ACC realistic training review boards (RTRB) to review ground and flying training requirements/programs for combat air forces (CAF) units. RTRB participants will include ACC/A3 representatives and ACC Airborne Reconnaissance Operations (ACC/A3CR) representatives as appropriate.

1.2.1.2. Process all change requests.

1.2.1.3. Determine training requirements to meet expected wartime tasking, contingency operations, and other unit missions.

1.2.1.4. Review subordinate unit supplemental instructions and supplemental training programs.

1.2.1.5. Approve EC-130H COMPASS CALL courseware.

1.2.2. Wing/Group Commanders will:

1.2.2.1. Develop programs to ensure training objectives are met. Assist subordinate units in management of training programs, ensure programs meet unit needs, and provide necessary staff support.

1.2.2.2. Attach each wing/group/operations support squadron (OSS) aircrew position indicator (API)-6/B flyer to a flying squadron.

1.2.2.3. Designate the training level to which each API-6/B flyer trains. Upon request, provide ACC/A3CR with a list of basic mission capable (BMC) and combat mission ready (CMR) designated manning positions no later than (NLT) the beginning of each training cycle. Review programs and manning position designations annually.

1.2.2.4. If applicable, forward supplements to this publication and other supporting documents to ACC/A3CR for review. Review supplements annually.

1.2.2.5. Review squadron training health reports and identify training shortfalls/limiting factors (LIMFACs) that adversely impact combat capability, and route through appropriate channels.

1.2.2.6. Publish guidance detailing procedures for student management at the EC-130H formal training unit (FTU), and maintenance of records for both students and qualified crewmembers.

1.2.3. Squadron Commanders (SQ/CCs) will:

1.2.3.1. Ensure adequate continuity and supervision of individual training needs, experience, and proficiencies of assigned/attached crewmembers.

1.2.3.2. Authorize specific, individual crewmembers to carry BMC qualification and are notified by the squadron training office if a CMR designated crewmember fails to maintain CMR status. **(T-3)** Review training/evaluation records to determine the training required for newly assigned crewmembers and formal training graduates to achieve BMC/CMR status.

1.2.3.3. Ensure ready aircrew program (RAP) missions further develop basic combat skills/tactical employment, simulating conditions anticipated in the unit mission. Only effective RAP missions are logged as RAP sorties. See **Attachment 2** for RAP mission definitions.

1.2.3.4. Review qualifications and training requirements of flight surgeons and determine appropriate flight restrictions.

1.2.3.5. Determine missions/events in which individual BMC crewmembers maintain qualification versus familiarization.

1.2.3.6. Determine utilization of BMC crewmembers.

1.2.3.7. Determine how many and which BMC and CMR crewmembers carry special capabilities/qualifications.

1.2.3.8. Where necessary, identify the supervisory level required for accomplishment of training.

1.2.3.9. Assist the wing/group in developing the unit training programs.

1.2.3.10. Monitor individual assigned/attached aircrew currencies and requirements.

1.2.3.11. Ensure crewmembers are qualified/current for sorties, events, and tasks they are scheduled against.

1.2.3.12. Identify shortfalls for all RAP and non-RAP events. Report shortfalls to the group commander utilizing the most current reporting guidance as dictated by the most current RAP Tasking Memorandum (RTM).

1.2.4. Individual crewmembers will:

1.2.4.1. Hand carry or digitally send all available training records to the gaining unit for qualification and training assessment.

1.2.4.2. Complete training requirements and currencies within the guidelines of this publication.

1.2.4.3. Participate only in activities for which they are qualified and current.

1.3. Processing Changes.

1.3.1. Refer recommended changes or questions about this publication to the OPR using DAF Form 847; route DAF Forms 847 from the field through the appropriate functional chain of command.

1.3.2. ACC/A3 will:

1.3.2.1. Process recommendations for change.

1.3.2.2. Forward recommended changes to Air Force Integration Division (AF/A3TP) for Air Force Deputy Chief of Staff of the Air Force for Operations (AF/A3) approval.

1.3.2.3. Address time-sensitive changes by immediate action message.

1.3.3. Training. Training programs for all COMPASS CALL crewmembers are designed to progress them from basic flying qualification training (initial qualification training [IQT], or requalification training [RQT], mission qualification training [MQT] and finally to continuation training [CT]) for the EC-130H, IQT/RQT and MQT as defined below:

1.3.3.1. IQT and RQT.

1.3.3.1.1. All EC-130H pilots and flight engineers (FEs) receive initial C-130 qualification training at Little Rock AFB, Arkansas. This training provides basic aircraft qualification (BAQ) on C-130H aircraft. However, BAQ aircrew must complete difference training (e.g., the academic portion of the applicable 42d Electronic Combat Squadron (42 ECS) syllabus and a minimum of two sorties on an EC-130H) before being designated qualified to fly unsupervised in the EC-130H. **(T-2)**

1.3.3.1.2. All EC-130H navigators, electronic warfare officers (EWOs) airborne maintenance technicians (AMTs), analysis operators (ANOs) and acquisition operators (AOs) accomplish IQT in the 42 ECS.

1.3.3.1.3. RQT is accomplished at the direction of the member's respective squadron commander and is based on the duration of the member's unqualified status.

1.3.3.1.3.1. Refer to AFMAN 11-202V, para 2.2, and/or the respective ACC-approved crew position syllabi for further guidance.

1.3.3.2. MQT. Due to the unique mission requirements onboard the EC-130H COMPASS CALL, all member's will accomplish approved MQT for their designated crew positions.

1.3.4. CT. The two aspects of CT are non-RAP and RAP requirements. Non-RAP requirements consist of aircrew training in basic flying skills that ensure safe operation of the aircraft. RAP requirements consist of specific mission-related training and focus on capabilities needed to accomplish a unit's core tasked missions.

1.3.5. Specialized Training. Specialized training consists of training in special skills necessary to carry out the unit's assigned mission. Specialized training includes crew position upgrades, specialized mission equipment training, quick reaction capabilities (QRCs) training, alternate mission equipment (AME) training, etc. and CT to maintain proficiency in special capabilities. Specialized training is accomplished upon assignment to CMR/BMC status. Unless otherwise specified, crewmembers in CMR/BMC positions may hold special certifications/qualifications provided additional training requirements are accomplished.

1.3.5.1. QRCs are capabilities requiring one-time training and certification. Units will document specialized training in personnel training records. **(T-3)** AMEs are capabilities which have formal training and certification requirements and may have RAP requirements as well.

1.3.5.2. The RTM designates RAP events for specialized mission equipment, number of crews required to meet capability levels, and may include any special instructions for QRCs (events, currencies, crews, etc.)

1.3.6. Aircrew Status. As defined in AFMAN 11-202V1, all aircrew will be assigned to CMR, BMC or BAQ status.

1.3.6.1. CMR crewmembers maintain proficiency and qualification in all core missions of the flying unit to which they are assigned or attached. CMR crewmembers maintain currencies that affect CMR status, accomplish all core designated flight training (sorties and events), and all mission ground training. Failure to complete this training or maintain these currencies results in regression to non-CMR (N-CMR) status unless waived by the 55th Electronic Combat Group Commander (55 ECG/CC). While N-CMR, crewmembers may perform missions, including exercises, in which they are current and qualified, similar to BMC crewmembers. CMR positions are filled by crewmembers completing minimum training for the individual to be qualified in all primary missions of the assigned unit and weapon system.

1.3.6.2. BMC crewmembers maintain familiarization with all unit core missions. For those missions in which they maintain familiarization only, BMC crewmembers must be able to attain proficiency and qualification in 30 days or less. **(T-3)** BMC crewmembers accomplish all mission-related ground training designated by their attached SQ/CC. Failure to complete BMC required training results in regression to non-BMC (N-BMC) status. While N-BMC, crewmembers may not perform RAP training sorties without supervision until a SQ/CC-approved recertification program is completed. BMC positions are filled by crewmembers who complete the minimum training required for the individual to be familiar with all and qualified in some of the primary missions tasked to their assigned unit and weapon system.

1.3.6.2.1. BMC crewmembers may be upgraded to CMR and deploy/participate in any mission for which they are qualified.

1.3.6.2.2. Minimum upgrade training is outlined in the supplement to this volume. The SQ/CC will determine any additional training requirements. **(T-3)**

1.3.6.3. N-CMR/N-BMC. Crewmembers regressing to N-CMR/N-BMC status will accomplish the requirements identified in **Paragraph 4.7**. **(T-3)**

1.3.6.4. Unqualified (UQ). Unqualified crewmembers require additional training and a flight evaluation for progression to higher qualification levels. All crewmembers unqualified in the aircraft must perform their duties under the direct supervision of an instructor/evaluator. **(T-2)** UQ crewmembers include personnel: enrolled in IQT, downgraded for lost currency, downgraded for demonstrated lack of ability, or downgraded for failure to meet standards during flight evaluation.

1.3.6.5. BAQ (pilots and FEs only). BAQ personnel undergo MQT prior to designation as BMC or CMR.

1.4. Training Concepts and Policies.

1.4.1. Units design training programs to achieve the highest degree of combat readiness consistent with flight safety and resource availability. The need for realistic training is balanced against the expected threat, aircrew capabilities, and safety. This publication provides training policies for use with procedures specified in applicable flying/operations publications.

Note: All mission training sorties include at least one contested electromagnetic spectrum training event as defined in the latest RTM.

1.4.2. ACC Training Support Squadron (TRSS) will develop and validate training programs when/where tasked.

1.4.3. SQ/CCs ensure training missions enhance combat capability in squadron-tasked roles and maintain crewmember proficiency. RAP training missions should emphasize basic combat skills using scenarios based on employment plans, location, current intelligence, and opposition capabilities. Use of procedures applicable to combat scenarios is desired, e.g., appropriate use of code words, authentication procedures, combat tactics, safe recovery procedures, tactical deception, in-flight reporting, threat reactions, contested EMS operations, and intelligence briefing/debriefing. In-flight Supervision. The following personnel must be under direct supervision of an instructor when performing aircrew duties: **(T-3)**

1.4.3.1. All unqualified and non-current crewmembers.

1.4.3.1.1. Non-current crewmembers are supervised when performing those events in which they are non-current.

1.4.3.1.2. Pilots who are unqualified or non-current in the aircraft per RTM **Attachment 2** require direct supervision during critical phases of flight.

1.4.3.2. "Senior officers" as defined in AFMAN 11-202V1, and **Paragraph 2.7**.

1.4.3.3. Staff personnel whom the wing/group commander have determined require instructor supervision.

1.4.3.4. Pilots, navigators, and FEs receiving air refueling training when within ¼ nautical mile (NM) of tanker.

1.4.3.5. Personnel undergoing upgrade or specialized training as defined in **Chapter 5**, or an approved training plan. **Exception:** Pilots in upgrade or specialized training only require direct supervision if the training is for skills required during critical phases of flight.

1.5. RAP Policy and Management.

1.5.1. Each RAP qualification level is defined by a total number of RAP sorties, broken down into mission types, plus specific qualifications and currencies as determined by ACC and unit commanders.

1.5.2. The total number of RAP sorties is the primary factor for maintaining an individual's qualification level. The breakout of sortie/mission types is provided as a guideline. Variations in sortie/mission types may be used as a basis for determining qualification level. Qualification is determined by the SQ/CC in consideration of ACC guidance and crewmember capabilities.

1.5.3. An effective RAP sortie requires accomplishment of a mission sortie. The RTM takes precedence over **Attachment 2** to determine crediting of a RAP sortie.

1.5.4. The SQ/CC's first priority should be to train all designated crewmembers to CMR.

1.5.5. Progression from BMC to CMR requires:

1.5.5.1. A 1-month lookback at the CMR sortie rate.

1.5.5.2. Qualification in all core missions required to be CMR.

1.5.5.3. Confirmation that the progressed crewmember can complete the prorated number of sortie/event requirements remaining at CMR by the end of the training cycle.

1.5.5.4. Completion of mission-related ground training, to include a current verification or certification (see RTM **Attachment 2**)

1.5.5.5. SQ/CC certification.

1.5.6. CMR/BMC crewmembers will fly the required monthly sortie rate. **(T-3)** If unable, refer to regression in **Paragraph 4.10**.

1.5.7. Aircrew Experience Level. Experience levels identify the number of events needed by aircrews to maintain BAQ, BMC, or CMR. The flying hour requirements for a crewmember to be considered experienced are listed in **Table 1.1**.

1.5.8. Crewmembers are classified as "inexperienced" when initially certified BMC/CMR by the squadron commander. Squadron commanders may reclassify crewmembers as "experienced" when they meet minimum hours in **Table 1.1** and demonstrate sufficient proficiency to handle the reduced CT requirements. Squadron training will document reclassification to "experienced" in the crewmember's training record. **(T-3)**

1.5.9. End-of cycle training requirements are based upon the crewmember's experience level on the last day of the current cycle. See **Table 1.1** for definitions of crewmember experience.

1.5.10. Units converting to another mission design series (MDS) or undergoing aircraft block/baseline modification may fly crewmembers in CMR positions at the BMC rate until one month prior to reaching initial operating capability (IOC) if the utilization (UTE) rate does not support CMR sortie rates.

1.5.11. The aircrew training cycle is based on the RAP cycle. Units will complete training requirements during the appropriate training cycle unless otherwise excepted. **(T-3)**

1.5.12. References to "mission crew" will be defined as referring to Mission Crew Commander (MCC), Mission Crew Supervisor (MCS), Analysis Operator (ANO) and Acquisition Operator (AO) crew positions.

Table 1.1. EC-130H Experienced Crewmember Requirements.

Crew Position	Total Hours [1]	C-130 Hours [1]	EC-130H Hours
AC	1200	300	200[2]
Pilot [3]	1000[4] 700	300 500	100 100
Navigator	600	300	100
Flight Engineer	1500 400	200 300	100 100
Mission Crew Commander	500	-	300
MCS, ANO, AO	300	-	150
AMT	750 450	- -	300 450

Notes:

1. Includes COMPASS CALL Mission Crew Simulator (CCMCS)/Operational Flight Trainer (OFT)/Weapons System Trainer (WST) for all crewmembers except AMTs.
2. EC-130H hours after certification as AC.
3. Applicable for this volume unless otherwise noted in the current RAP tasking message.
4. Does not include RPA time.

1.6. Training Sortie Program Development.

1.6.1. RAP sortie and event requirements (see **Attachment 2** for definitions) apply to CMR/BMC aircrew as well as those carrying special capabilities or qualifications. The standard sortie requirements in the RTM establishes the minimum number of sorties per training cycle for CMR/BMC levels of training. The RTM takes precedence over this publication and may contain an updated sortie requirement, or missions/events not yet incorporated into **Attachment 2**.

1.6.2. Units must consider non-RAP requirements in addition to RAP requirements. **(T-3)**

1.6.3. Units must consider collateral or cost-of-business sortie requirements when developing unit flying hour programs. **(T-2)** These sorties are not directly related to combat employment training but are necessary in day-to-day unit operations. These include, but are not limited to, ferry flights, incentive/orientation flights, deployments, and air shows. For each RAP training cycle, ACC should allocate a block of sorties to each unit for these purposes.

1.6.4. Unit flying hour programs are allocated a number of attrition sorties that compensate for non-effective training. Attrition sorties are logged when a training sortie, RAP or non- RAP, is planned but a major portion of training valid for that mission is not accomplished. Attrition can be caused by poor weather, air aborts, etc. To accurately allocate the number of attrition sorties, it is essential that attrition sorties are logged appropriately.

1.7. Training Records and Reports.

1.7.1. Units will maintain aircrew records for individual training and evaluations IAW the following manuals and instructions, as supplemented:

1.7.1.1. AFMAN 11-202V1, *Aircrew Training*

1.7.1.2. AFMAN 11-202V2, *Aircrew Standardization/Evaluation Program*

1.7.1.3. DAFMAN 11-401, *Aviation Management*

1.7.1.4. AFMAN 11-421, *Aviation Resource Management*

1.7.1.5. ACCI 11-464, *Training Records and Performance Evaluation in Formal Flying Training Programs*

1.7.1.6. DAFI 36-2670, *Total Force Development*

1.7.2. Units will track the following information for all aircrew:

1.7.2.1. Ground training.

1.7.2.2. Accomplished individual sorties, RAP sorties, sortie types, and events cumulatively for the training cycle.

1.7.2.3. RAP sortie accomplishments using 1-month and 3-month running totals for lookback.

1.7.2.4. Currencies.

1.7.3. Units will maintain permanent flying training folders IAW the above listed regulations and store them in the respective operational flying squadron training office. **(T-2)** Units will preclude unauthorized access by maintaining folders under positive control at all times. **(T-2)** Individuals will place an Air Force Operations Resource Management System (AFORMS) printout in the permanent flying training record upon permanent change of assignment (PCA)/permanent change of station (PCS) to another flying unit, and hand carry the record to the gaining unit. **(T-2)**

1.7.3.1. The folder is divided into six sections. Six-part folders are used. The folder is arranged as follows:

1.7.3.1.1. **Section 1.** Training Record Review

1.7.3.1.2. **Section 2.** Mission Qualification Training (MQT)/Continuation Training (CT)

1.7.3.1.2.1. Combat Mission Ready (CMR) Certification

1.7.3.1.2.2. Other Certification Letters, (e.g., Difference Training, Touch and Go)

1.7.3.1.2.3. Memos for Record

1.7.3.1.3. **Section 3.** Activity Record

1.7.3.1.3.1. ACC Form 166, *Student Activity Record*

1.7.3.1.3.2. ACC Form 206, *Individual Mission Grade Sheet*

1.7.3.1.4. **Section 4.** Aircrew Specialty Training

1.7.3.1.4.1. Enlisted:

1.7.3.1.4.1.1. Career Field Education and Training Plan (CFETP)

1.7.3.1.4.1.2. DAF Form 2096, *Classification/On-The-Job-Training Action*

1.7.3.1.4.1.3. Career Development Program correspondence

1.7.3.1.4.2. Officers: Miscellaneous Correspondence

1.7.3.1.5. **Section 5.** Language Records (if applicable)

1.7.3.1.5.1. Defense Language Proficiency Test (DLPT) scores

1.7.3.1.5.2. Cryptologic Skills Proficiency Test (CSPT) documentation

1.7.3.1.5.3. Significant Language Training Event (SLTE) documentation and certificates

1.7.3.1.6. **Section 6.** Language Remedial Training Records (if applicable)

1.7.3.1.6.1. Individual Language Training Plan (ILTP)

1.7.3.1.6.2. Remediation Training Phase I/II Entry Letters

1.7.3.1.6.3. Letter Removing Individual from Remedial Training

1.7.3.1.6.4. Skill Level/Air Force Specialty Code (AFSC) Waivers

1.8. Aircrew Utilization Policy.

1.8.1. Commanders should ensure wing/group tactical crewmembers (API-1/2/6/A/Bs) fill authorized positions IAW the unit manning document (UMD) and aircrew status is properly designated. The overall objective is that crewmembers perform combat-related duties. Supervisors may assign crewmembers to valid, short-term tasks (escort officer, mishap board member, etc.) but must continually weigh factors involved, such as level of aircrew tasking, flying proficiency, and experience. **(T-3)** Inexperienced crewmembers in the first year of initial operational assignment will be prioritized to duties directly related to combat/combat training activities. **(T-3)**

1.8.2. Commanders will ensure wing/group staff crewmembers (API-6/Bs) perform duties justified in ACC manpower standards documents and authorized in UMDs. **(T-3)**

1.8.3. Crewmembers will not perform long-term duties that detract from the primary duties of training for, or performing, the unit flying mission. **(T-3)**

1.9. Waiver Authority.

1.9.1. With ACC/A3 approval, waiver authority for all requirements of the RTM is the 55 ECG/CC. The RTM takes precedence when there are discrepancies with this publication. Additional guidance may be provided in the memo. Unless specifically noted otherwise in the appropriate section, ACC/A3 may delegate waiver authority to the 55 ECG/CC for individual requirements in **Chapter 4** and **Chapter 5**, on a case- by-case basis, to accommodate variations in aircrew member experience and performance. For all other provisions of this volume, and IAW AFMAN 11-202V1, the default waiver authority for compliance items not identified with a tier number or an office specifically identified/delegated to approve waivers

is ACC/A3. Waiver authority for supplemental guidance is as specified in the supplement and approved through higher-level coordination authority.

1.9.2. Units subordinate to a Numbered Air Force (NAF) will forward requests directly to ACC/A3C and provide their NAF/A3 with an informational copy. **(T-2)** Follow the format as listed in **Attachment 5**.

1.9.3. Unless otherwise indicated, waivers to this publication are valid until the end of the RAP training cycle.

1.9.4. Test Units. MAJCOMs (e.g., AFMC) or Operations Groups possessing EC-130H models as a result of modification or test programs may supplement or change requirements of this volume as dictated by test requirements.

1.9.5. Formal Course Waivers.

1.9.5.1. Waiver for In-Unit IQT/RQ/Upgrade.

1.9.5.1.1. In-Unit IQT/RQ/Upgrade is defined in this publication as that C-130 IQT/RQ/Upgrade training normally performed at the Basic C-130 FTU, Little Rock AFB, AR. In-Unit IQT/RQ/Upgrade is conducted using an approved IQT, RQ, or instructor upgrade syllabus. In-Unit IQT/RQ/Upgrade waivers are requested as detailed in **Paragraph 1.9.5.3**. When In-Unit IQT/RQ/Upgrade training is authorized, ACC assumes responsibility for the burden of providing this training.

1.9.5.1.2. ACC/A3 is the approval authority to conduct In-Unit IQT/RQ/Upgrade and is the waiver authority to change formal requirements of In-Unit IQT/RQ/Upgrade.

1.9.5.2. Waiver for IQT. ACC/A3 is the waiver authority for all ACC/A3-approved training syllabi taught at the 42 ECS. ACC/A3 can delegate this waiver authority in each syllabus to the wing commander, further delegable in whole or in part no lower than the FTU group commander.

1.9.5.3. Units will submit waiver requests for IQT IAW **Attachment 5**. **(T-3)**

1.10. Aircrew Training While Duty not Involving Flying (DNIF) Status.

1.10.1. Crewmembers whose status is DNIF may complete ground training events, including simulator training, if the member's physical condition allows. Consult the flight surgeon initiating the DD Form 2992, *Medical Recommendation for Flying or Special Operational Duty*, if the DNIF status includes ground training limitations.

Chapter 2

INITIAL QUALIFICATION TRAINING

2.1. General. This chapter outlines IQT of crewmembers in the EC-130H aircraft. Navigators, AMTs, EWOs, Acquisition Operators and Analysis Operators will complete IQT at the 42 ECS IAW this chapter. **(T-3)** These crew positions will complete MQT and accomplish CT at their assigned operational squadron as described in **Chapter 3** and **Chapter 4**. **(T-3)**

2.1.1. Formal EC-130H IQT is administered by the 42 ECS in accordance with ACC/A3-approved course syllabi. **Note:** Students may be assigned to operational units while awaiting class start dates.

2.1.2. The 42 ECS normally performs all student academics, course management and registrar duties. Formal syllabus training in the aircraft and CCMCS/WST is normally conducted under the supervision of the 42 ECS instructor corps or other qualified instructor on dedicated lines. By exception, formal syllabus training can be conducted on other squadron's sorties with the operational SQ/CC, Squadron Director of Operations (SQ/DO) or designated representative approval.

2.1.3. The Student Training Flight Commander manages students during IQT. Academic training is scheduled by the 42 ECS Registrar in coordination with course managers and civilian contractors. Part-task training, CCMCS training, and flying training is coordinated and monitored via course managers/civilian contractors through the training offices of the 42 ECS.

2.2. In-Unit IQT/RQT (Pilot/Flight Engineer only).

2.2.1. When C-130 FTU training is not available, IQT may be administered by the 42 ECS IAW the provisions of this paragraph. IAW AFMAN 11-202V1, training is initiated within 45 days of reporting for duty and completed as specified in the applicable syllabus.

2.2.2. Units must use waiver approval IAW **Paragraph 1.9**. **(T-2)** ACC/A3 is the approval authority to conduct In-Unit IQT/RQT and the waiver authority for changes to requirements.

2.2.3. IQ/RQ flight evaluations not conducted at the Basic C-130 FTU may be accepted from other MAJCOMs provided they meet ACC and unit standards.

2.3. Ground Training.

2.3.1. Units will credit ground training events meeting time requirements accomplished during IQT towards CT requirements listed in RTM **Attachment 2**. **(T-3)** Individuals must complete items from **Table 2.1** and grounding items from RTM **Attachment 2** prior to the first flight. **(T-3)**

2.3.2. Units must ensure examinations satisfy the requirements of AFMAN 11-202V2 and ACCMAN 11-2EC-130H, Volume 2, *EC-130H Aircrew Evaluation Criteria,* and ACC guidance. **(T-2)**

2.4. Flying Training.

2.4.1. Formal course syllabus mission objectives and tasks are the minimum requirements for IQT and MQT. Additional training due to lack of student progression is available within the constraints of the formal course syllabus.

2.4.2. Training may be conducted on operational missions and large force exercises on a limited basis, provided that specific theater operation orders (OPORDs) and directives are followed.

2.4.3. BAQ flight crew may log non-RAP events listed in RTM **Attachment 2**. **(T-3)**

2.4.4. ACs.

2.4.4.1. Pilots undergoing MQT will not be designated as pilot-in-command. **(T-3)**

2.4.4.2. Cross-flow Pilots. Cross-flow pilots are previous ACs from other aircraft, with no prior C-130 pilot qualification. Manage training IAW **Paragraph 5.4.3** of this volume. **Table 5.1** does not apply to cross-flow pilots trained as pilots in the left seat at the Basic C-130 FTU.

2.4.4.3. Pilots transitioning from rotary-wing aircraft will be trained as mobility pilot development (MPD) graduates unless they have a minimum of 500 hours of fixed-wing time (including undergraduate pilot training (UPT) flying time). **(T-3)**

2.5. Time Period for IQT.

2.5.1. Training is completed within the time specified by the syllabus. Failure to meet the specified time limit requires notification to ACC/A3 through ACC/A3C with the crewmember's name and rank, reason for delay, planned actions, and estimated completion date.

2.5.2. Aircrew requiring training, including requalification or recurrency training, prior to entering a formal syllabus must start flying within 45 days of reporting for duty IAW AFMAN 11-202V1. Aircrew will complete this training within 60 days of starting training. **(T-3)**

2.6. IQT for Senior Officers (Colonel Selects and Above).

2.6.1. AFMAN 11-202V1, identifies senior officer qualification requirements.

2.6.2. 55 ECG/CC and deputy group commanders should, at minimum, be BMC in the EC-130H and may be a fully certified flight examiner. These individuals are not required to maintain instructor certification or CMR status.

2.6.2.1. Pilot or navigator group commanders may attain BAQ status through attending either initial or requalification courses (as required). Pilots will normally attend training at the Basic C-130 FTU. **(T-2)**

2.6.2.2. MCCs will attend formal IQ training at the 42 ECS. **(T-2)** MCCs will attend a TX-3 commander-directed qualification course developed and administered by the 42 ECS. **(T-2)**

2.6.3. Wing/vice wing commanders who qualify in an EC-130H as their primary aircraft will complete all training necessary to be designated as BMC. **(T-2)**

2.6.4. Senior officers occupying a primary position and performing flight evaluations for unqualified pilots/navigators/MCCs will be fully qualified instructors. **(T-2)** These crewmembers will complete all IQT/MQT necessary to be designated as BMC and may fly unsupervised. **(T-2)**

2.6.5. All other senior officers will attend a Senior Officers Course (SOC). **(T-2)** Pilot's SOC is conducted at the Basic C-130 FTU. Senior officers who were previously qualified C-130 pilots do not need to attend the Basic C-130 FTU SOC unless unqualified for more than 5 years.

2.6.6. Senior officers must meet course entry prerequisites and complete all syllabus requirements unless waived IAW this chapter and **Paragraph 1.9**. **(T-2)**

2.7. Senior Officers. Enrolled in any SOC are in formal training status.

2.8. Flight Surgeons. AFMAN 11-202V1, establishes flight surgeon initial qualification requirements. Flight Surgeons will complete a qualification examination (pertaining to their primary assigned aircraft) administered by Standardization-Evaluation (Stan/Eval) and all training required by **Table 4.2**. **(T-3)**

Table 2.1. IQT Ground Training.

Task ID	Description	Reference Directive	Grounding	Affect BMC/ CMR	Notes
Note: Waiver authority for the ground training specified is IAW the reference directive. This list is intended as a single source reference. Where discrepancies exist, reference directive takes precedence. Credit ground training accomplished during IQT and MQT toward CT requirements for the training cycle in which it was accomplished.					
AIRCREW TRAINING					
GA06XC	Crew Resource Management	AFMAN 11-290	Yes	No	
	Initial Physiological Training	AFMAN 11-403	Yes	No	
GA07XC	Marshalling Exam	AFMAN 11-218	Yes	No	2
AIRCREW LIFE SUPPORT INITIAL TRAINING					
LL01XC	Aircrew Flight Equipment Familiarization Training	AFMAN 11-301V1	Yes	No	3
LL03XC	Emergency Egress Training (EET)-Non-Ejection Seat	AFMAN 11-301V1	Yes	Both	
LL06XC	Aircrew Flight Equipment Training	AFMAN 11-301V1	No	No	3
LL07XC	Aircrew Flight Equipment Fit Check	AFMAN 11-301V1	Yes	No	3
LL08XC	ACBRN Fit Check	AFMAN 11-301V1	No	Both	8
INITIAL SURVIVAL TRAINING					
SS01XC	Local Area Survival (LAS)	AFI 16-1301	Yes	No	3
SS05XC	Water Survival Training, Non-Parachuting (S-V90-A)	AFI 16-1301	Yes	No	4
SS06XC	Emergency Parachute Training	AFI 16-1301	Yes	No	4
SS09XC	Emergency Parachute Training with ACBRN	AFI 16-1301	No	CMR	
SS31XC	Water Survival Training, Parachuting (S-V85-A)	AFI 16-1301	Yes	No	4

SS37XC	Advanced SERE skills Training (S-V97-A)	AFI 16-1301	Yes	No	4
SS38XC	Long Term Survival Training (S-V98-A)	AFI 16-1301	Yes	No	4
DOD SECURITY TRAINING					
GA09XC	COMSEC	AFMAN 17-1302-O	Yes	No	6,7
GA50XC	Annual Security Training	DoDM 5105.21V3	No	Both	5

Notes:

1. See Attachment 2 for Event definitions. All initial training events meet the requirements for their corresponding recurring event listed in RTM **Attachment 2**.
2. Pilots, FEs, navigators, and AMTs are required to test within 30 days of PCS. (T-3) Not required if tested at a formal school within the previous 6 months.
3. Required prior to first flight.
4. Required prior to first flight for Non-Rated Officers and Enlisted only. Optional for rated officers for MQT but required for CMR.
5. Personnel without GA50XC currency will not be allowed access to SCI materials to include disk packs for mission sorties and WST/CCMCS missions. Their access badge to any 55 ECG Sensitive Compartmented Information Facility (SCIF) and the WST/CCMCS will be suspended until training is accomplished.
6. Pilots, Navs, AMTs, and MCCs only.
7. Communications Security (COMSEC) is a grounding requirement only when the mission profile requires the use of COMSEC.
8. Event must be completed prior to an aircrew performing their initial ACDTQT flight requirement and prior to deploying to a CBRN threat environment.
9. Use Task ID GA06XC for Initial, Refresher, and Instructor CRM.

Chapter 3

MISSION QUALIFICATION TRAINING (MQT)

3.1. General. This chapter outlines the minimum requirements criteria and training requirements for mission qualification training and mission certification (assignment of BMC or CMR). Aircrew must be BMC/CMR within 90 days after completion of IQT syllabi. **(T-3)**

3.2. MQT. MQT is a 55 ECG/CC-approved squadron training program that upgrades EC-130H crewmembers into BMC or CMR status and enables the crewmembers to accomplish unit-specific missions.

3.2.1. Ground training accomplished during IQT are credited toward MQT, BMC, and CMR requirements.

3.2.2. Upgrade to BMC will follow the guidance of this regulation and SQ/CC training requirements. SQ/CCs must develop and maintain their unit's BMC training programs **(T-3)** Aircrew must at a minimum complete all BMC requirements listed in **Table 3.1** and **Paragraph 4.3.5**.

3.2.3. Upgrade to CMR will follow the guidance of this regulation and SQ/CC training requirements. SQ/CCs must develop and maintain their unit's CMR training programs. **(T-3)** Aircrew must at a minimum complete all CMR requirements listed in **Table 3.1** and **Paragraph 4.3.6**.

Table 3.1. Ground Training Required for MQT.

Task ID	Subject [1]	Reference Directive	Grounding	Affect BMC/CMR	Notes
Note: Waiver authority for specified ground training is IAW the reference directive. This list is intended as a single source reference. For any discrepancies, the reference directive takes precedence. Ground training accomplished during IQT/RQ/MQT may be credited toward CT requirements for the training cycle in which it was accomplished.					
AIRCREW TRAINING					
ME08XC	ACDTQT	**Paragraph A2.2.2**	No	CMR	
GS47XC	Verification Training - Initial	**Paragraph A2.2.22.1**	No	Both	4
GS63XC	VTRAT	**Paragraph A2.2.23**	No	CMR	2
AIRCREW LIFE SUPPORT TRAINING					
LL05XC	Egress w/ ACBRN Equipment	AFI 11-301V1	No	CMR	3

Notes:

1. See **Attachment 2** for event definitions. All initial training events meet the requirements for their corresponding recurring event listed in RTM **Attachment 2**.

2. Applies to all aircrew members.

3. Required before first flight with Aircrew Chemical, Biological, Radiation, Nuclear (ACBRN) Equipment.

4. N/A for FEs and AMTs.

Chapter 4

CONTINUATION TRAINING (CT)

4.1. General. This chapter specifies training requirements for BAQ, BMC, and CMR crewmembers. Crewmembers must be qualified IAW AFMAN 11-202V2 and ACCMAN 11-2EC-130HV2, and complete IQT and MQT to maintain BAQ/BMC/CMR status.

4.2. Ground Training. Commanders will direct additional training, as necessary, to ensure all aircrew attain and maintain a state of proficiency which will permit immediate and successful completion of the unit's assigned mission. Ground training will be accomplished IAW the aircrew specific ground training tables in local guidance and the current EC-130H RTM. The waiver authority for the ground training specified is IAW the reference directive.

4.2.1. RTM **Attachment 2** designates ground training requirements for all crewmembers. For grounding items, crewmembers will not perform flight duties until training for the item has been accomplished. **(T-3)** For CMR items, crewmembers will be regressed to N-CMR/N-BMC until training for the item has been accomplished. **(T-3)**

4.2.2. BMC crewmembers need not maintain currency on CMR ground training events for which they maintain familiarization only but must regain currency on the events prior to flying operational or training missions for which that training event applies. Alert status is considered an operational flying mission.

4.2.3. Ground training accomplished during IQT and MQT is credited toward CT requirements, provided the currency requirements listed in RTM at **Attachment 2** are met.

4.2.4. Most ground training events do not follow the traditional CAF training cycle. Currency expires on the last day of the calendar month indicated for expiration in the RTM at **Attachment 2**.

4.2.5. Units are encouraged to combine like courses whenever possible and teach only those portions applicable to their aircraft and mission. Course descriptions are listed in local guidance.

4.2.6. Waivers for Aircrew Flight Equipment Continuation Training (AFECT) events are routed through the 55 ECG Aircrew Flight Equipment Officer and reviewed and forwarded IAW guidance in AFMAN 11-301, Volume 1, *Aircrew Flight Equipment (AFE)*, with ACC/A3CR as an informational addressee.

4.2.7. Waivers for Code of Conduct Training (CoCCT) events are routed through the wing Survival, Evasion, Resistance, and Escape (SERE) Program Manager and reviewed and forwarded IAW AFI 16-1301, *Survival, Evasion, Resistance, and Escape (SERE) Program,* with ACC/A3CR as an informational addressee.

4.2.8. Simulated Emergency Procedures Training (SEPT). SEPTs are designed to review abnormal/emergency procedures and aircraft systems operations during realistic scenarios. SEPTs should be accomplished in crew-sized groups so all members may fully participate. An abnormal or emergency situation should be presented, and the crew should discuss actions necessary to cope with the malfunction and carry it to a logical conclusion. Discussion of affected system indications, effects on other systems, aircraft performance, mission

degradation, and crew coordination should be included. Emergency procedures and special interest items should be emphasized.

4.2.8.1. SEPT discussions are normally conducted on the ground, but continuation of the training may be conducted in flight on a limited basis IAW the restrictions of **Paragraph A3.13**. These airborne SEPTs are tailored to the particular SEPT discussed during preflight planning. Document SEPT accomplishment on the Go/No-go portion of Flight Crew Information File review and/or IAW local guidance. Crewmembers will not fly unsupervised unless a SEPT was accomplished during the current or previous month. **(T-3)**

4.2.8.2. Any "door open" procedures/maneuvers accomplished in conjunction with a SEPT are conducted in accordance with local guidance.

4.2.9. Ground training event definitions are contained in **Attachment 2**.

4.2.10. A qualified instructor who instructs a class receives credit for that academic training requirement. The instructor must be current on the event prior to teaching the class.

4.2.11. Crewmembers that enter N-BMC/N-CMR status because of overdue ground training will regain BMC/CMR status upon completion of training.

4.3. Flying Training.

4.3.1. Flight Crew non-RAP requirements, RAP requirements and currencies are published in the RTM.

4.3.2. Crewmembers will require additional training IAW **Paragraph 4.10** when they fail to accomplish requirements of RTM (**Attachment 2**) during the training cycle, but failure does not affect BMC/CMR status. **(T-3)**

4.3.3. Do not credit landings or air refueling events in the simulator toward events in the RTM at **Attachment 2** unless the events are accomplished in an approved EC-130H or C-130H WST. Ensure "S" prefix is utilized for events logged in an approved EC-130H or C-130H WST. Accomplish all ground training items or use the Restrictions tab under Profile Task Information within ARMS.

4.3.4. BAQ Requirements. BAQ crewmembers will complete a qualification evaluation (IAW AFMAN 11-202V2, and ACCMAN 11-2EC-130HV2), all ground training items in the RTM at **Attachment 2** which do not affect BMC/CMR status, non-RAP requirements in the RTM at **Attachment 2**, and non-RAP currencies in RTM **Attachment 2**. **(T-2) Exception:** Air-to-Air Refueling (AAR) qualified BAQ crewmembers are required to complete AAR requirements in the RTM and AAR currencies in the RTM at **Attachment 2**.

4.3.5. BMC Requirements. BMC crewmembers will:

4.3.5.1. Complete all requirements for BAQ status. **(T-3)**

4.3.5.2. Complete a mission evaluation IAW AFMAN 11-202V2, as supplemented, and ACCMAN 11-2EC-130HV2. **(T-3)**

4.3.5.3. Maintain all currencies in the RTM at **Attachment 2**. **(T-3)**

4.3.5.4. Accomplish RAP requirements in the RTM. **(T-3)**

4.3.5.5. Accomplish all ground training items in the RTM at **Attachment 2** which affect BMC status. **(T-3)**

4.3.5.6. Maintain the RAP BMC sortie rate (lookback) detailed in the RTM at **Attachment 2**. **(T-3)**

4.3.5.7. Maintain non-RAP BMC requirements in the RTM at **Attachment 2**. **(T-3)**

4.3.6. CMR Requirements. CMR crewmembers will:

4.3.6.1. Complete all requirements for BMC status. **(T-3)**

4.3.6.2. Accomplish all ground training in Major changes include transition from a 12-month to 24-month Ready Aircrew Program cycle and the removal of Weapon System Officer and Mission Commander qualification reference the RTM at **Attachment 2**. **(T-3)**

4.3.6.3. Maintain the RAP CMR sortie rate (lookback) detailed in the RTM at **Attachment 2**. **(T-3)**

4.3.6.4. Maintain non-RAP CMR requirements in the RTM at **Attachment 2**. **(T-3)** Instructor/Evaluator Training Requirements. Instructors/Evaluators will be current and qualified/certified in an event in order to instruct/evaluate that event. **(T-2)** Instructors/Evaluators will maintain BMC status at a minimum to instruct/evaluate RAP events. **(T-3)**

4.3.7. Instructors and Evaluators may log their RAP requirements while instructing or evaluating with the exception of takeoffs, landings or pilot air refueling if the Instructor/Evaluator is not manipulating a set of controls. Instructors/Evaluators may log their RAP requirements if they are physically performing the maneuver as a demonstration while instructing/evaluating.

Table 4.1. Flight Surgeon and Flight Test Engineer Training.

Task ID	Subject [1]	Frequency	Reference Directive	Grounding	Affect Mobility Status	Notes
Note: Waiver authority for the ground training specified is IAW the reference directive. This list is intended as a single source reference. Where discrepancies exist, the reference directive takes precedence. Ground training accomplished during MQ training may be credited toward CT requirements for the training cycle in which it was accomplished.						
AIRCREW TRAINING						
GA05XC	Initial CRM	One-time requirement	AFMAN 11-290	No	Yes	4
GA06XC	CRM Refresher	24 Mos.	AFMAN 11-290, AFI 11-290 ACC Sup AFMAN 11-202V1	Yes	No	5
	Flight Physical	12 Mos.	AFI 48-170	Yes	No	7
	Physiological Refresher	5 Years	AFMAN 11-403	Yes	No	
AIRCREW FLIGHT EQUIPMENT CONTINUATION TRAINING (AFECT)						
LL01XC		Initial	AFMAN 11-301V1	Yes	No	

LL03XC		12 Mos.	AFMAN 11-301,V1	Yes	No	
LL04XC		24 Mos.	AFMAN 11-301,V1	No	Yes	2, 6
LL06XC		24 Mos.	AFMAN 11-301,V1	No	Yes	
AIRCREW FLIGHT EQUIPMENT FAMILIARIZATION TRAINING						
Emergency Egress, Non-Ejection Seat	Combat Survival Training	36 Months	AFI 16-1301, ACC Sup	No	Yes	2, 3, 6
ACBRN Training	Conduct After Capture	36 Months	AFI 16-1301, ACC Sup	No	Yes	2, 3, 6
Aircrew Flight Equipment Training	Water Survival Training	36 Months	AFI 16-1301, ACC Sup	No	Yes	2, 3, 6
SS06XC	Emergency Parachute Training	36 Months	AFI 16-1301, ACC Sup	Yes	No	

Notes:

1. See **Attachment 2** for event definitions.
2. Flight Surgeons without a mobility requirement do not need to accomplish.
3. Accomplished once per assignment not to exceed 36 months.
4. Applicable only to flight test engineers.
5. For Flight Surgeons, One-time requirement in the primary assigned aircraft unless required to perform aeromedical evacuation duties.
6. Not applicable to flight test engineers.
7. Physicals become due 12 months (366 days) from the last PHA completion date, and expire 90 days later (456 days total). **(T-2)**

4.3.8. Special Qualifications/Training:

4.3.8.1. Units will conduct specialized training IAW **Chapter 5**, guiding syllabi, and the RTM. **(T-3)** Sortie requirements are dictated by the RTM. Failure to accomplish special qualification requirements specified in the RTM results in loss of currency only for the special qualification. Units will follow **Paragraph 4.7** for recurrency/recertification requirements for special capabilities/certifications. **(T-3)**

4.3.9. Designated Training (TF-coded) or Test (CB-Coded) Aircraft Unit Requirements:

4.3.9.1. Crewmembers assigned/attached to TF- or CB-coded units will be designated as experienced and accomplish the requirements as shown in the RTM at **Attachment 2** for BMC/BAQ as applicable. **(T-3)** In addition, crewmembers will comply with currencies in the RTM at **Attachment 2** for events in which they are qualified. **(T-3)** For instructors, failure to accomplish these requirements does not affect instructor qualification, but requires additional training as required by the SQ/CC prior to resuming instructor duties in the delinquent event(s). **Exception:** Crewmembers not AAR-qualified are not required to complete AAR currencies shown in the RTM at **Attachment 2**.

4.3.9.2. Units will conduct mission and instructor evaluations IAW AFMAN 11-202V2, and ACCMAN 11-2EC-130HV2. **(T-2)**

4.3.10. Supervisory Aircrew Personnel Requirements:

4.3.10.1. Units will ensure Senior Officer training is IAW AFMAN 11-202V1. **(T-2)** This paragraph applies to Colonel selects and above occupying positions designated as requiring operational flying. This paragraph does not apply to Colonel selects and above assigned to a standardization and evaluation function.

4.3.10.2. Supervisory personnel who accomplish a senior officer's course will fly under the direct supervision of an instructor if required by their AF Form 8, *Certificate of Aircrew Qualification*. **(T-2)**

4.3.10.3. Senior officers assigned or attached for flying to EC-130H units will maintain BAQ status but may be designated BMC or CMR as required. **(T-2)** These officers will be designated as experienced and maintain 50 percent of BAQ/BMC RAP/non-RAP requirements and all currencies. **(T-2)**

4.3.10.4. Senior Officers who maintain standard BMC/CMR requirements may fly in unrestricted status.

4.3.10.5. Commanders and their deputies who supervise EC-130H units, and are qualified in another aircraft they supervise, may fly under the direct supervision of an instructor. Direct supervision is not required for individuals who have obtained multiple MDS qualification in the EC-130H IAW with AFMAN 11-202V1.

4.4. Special Categories.

4.4.1. Flight Surgeon flying rates, requirements and currencies are IAW AFMAN 11-202V1.

4.4.2. ACC and NAF API-8/D crewmembers performing aircrew duties:

4.4.2.1. Higher Headquarters (HHQ) personnel will pre-coordinate with the supporting unit and be in appropriately coded API billets in order to fly, unless supporting a formal inspection. ACC division chiefs (flight safety and/or inspector general) or the 16th Air Force Standardization/Evaluation (16AF/A3V) are reviewing authorities for assigned personnel. ACC and/or 16AF will:

4.4.2.1.1. Coordinate with the supporting agency to ensure appropriate ARMS data is maintained and provided IAW DAFMAN 11-401.

4.4.2.1.2. Review attached crewmember accomplishments and currencies prior to authorizing participation in training.

4.4.2.1.3. Provide each crewmember with written documentation specifying the sortie types and events the individual is authorized to fly.

4.4.2.2. HHQ flying personnel maintaining BMC status are exempt from continuation ground training affecting BMC. These individuals will be designated as experienced and fly all RAP/non-RAP requirements at 50% of the BMC rate. **(T-2)** All event currencies apply.

4.4.3. ACC-assigned Flight Test Engineers (FTE). FTEs are engineers or scientists occupying duty positions requiring them to conduct or participate in flight test missions on a regular basis.

These personnel are on aeronautical orders, hold an AFSC of X61S or X62E, and have an aviation service code of 9D. FTEs are authorized to log time as primary crewmembers when performing duties IAW AFI 65-503, *US Air Force Cost and Planning Factors*. FTEs may fly to maintain proficiency and improve knowledge in employment of the weapon system, when not performing test duties. FTEs will be attached to one of the operational COMPASS CALL squadrons for flying if primary aircraft is the EC-130H. **(T-3)**

4.4.3.1. FTE Initial Ground Training. FTEs are exempt from academic ground training, periodic exams, all mobility training, and special training programs within authorized mission areas. In lieu of the flight evaluation, FTEs will complete the flight surgeon closed book exam. **(T-2)** FTEs will complete grounding items in **Table 4.2** and LL01XC prior to first flight. **(T-3)** FTEs assigned/attached to units, who have not flown unit-assigned aircraft in the past, will be given an Aircraft/Mission System overview by an Instructor MCC prior to flight. **(T-3)** Training completed during previous flying assignments may count towards AFE and SERE requirements when training is similar in nature. FTEs are encouraged, but not required, to attend COMPASS CALL mission crew academic courses.

4.4.3.2. FTE Initial Flying Training. The first flight in the unit-assigned aircraft is with an Instructor MCC and may be flown in conjunction with other training sorties. The briefing and sortie emphasize crew coordination, aircraft egress, communications, emergency equipment, normal mission timing/checklist items, and mission equipment use. Upon completion of the flight, the FTE is considered mission qualified for test and training missions.

4.4.3.3. FTE Recurring Training. Consider FTEs with more than 6 months of flying as experienced. Maintain the training requirements in **Table 4.2** and basic sortie currency in the RTM at **Attachment 2** Loss of Currency. Upon loss of currency, the next flight is with a mission crew instructor.

4.5. Difference Qualification.

4.5.1. Difference qualification is normally conducted when training in a different series aircraft in the same MDS. Difference qualification is conducted IAW AFMAN 11-202V1.

4.5.2. All C-130 variants except C-130Js are considered the same MDS. Completion of difference training, as defined in **Paragraph 1.3.3.1.1**, certifies pilots, navigators, and FEs in the EC-130H as "basic" (First Pilot [FP], First Navigator [FN], First Flight Engineer [FF]). Training and certification are documented in individual training records. Difference training is normally accomplished concurrently with the MQT syllabus.

4.5.2.1. Certification to fly non-mission, training aircraft is documented in individual training records and tracked on the unit letter of certification. Minimum requirements for certification include the following:

4.5.2.2. Pilots, navigators, and FEs receive a ground training session with a qualified instructor crewmember in the same specialty. Scanners will perform a preflight and a ground review of checklists with an instructor AMT. **(T-3)**

4.6. Baseline Certification. This section applies to future baseline versions of COMPASS CALL. The 755 OSS in conjunction with 42 ECS will develop Baseline Certification Training Plans to outline required training for all crewmembers. **(T-3)**

4.6.1. Crewmembers may be certified in multiple baselines of EC-130H aircraft with squadron commander approval, after completion of required certification training. Baseline certification accomplished in IQT/MQT is documented in individual training records.

4.6.2. Once baseline-certified in another baseline of the EC-130H, all RAP, non-RAP, and currency requirements may be logged in any baseline.

4.7. Currency/Recurrency.

4.7.1. The RTM at **Attachment 2** defines flying currency requirements for all EC-130H crewmembers.

4.7.2. Crewmembers are non-current the day currency expires (e.g., an event with a 45-day currency completed on 4 January becomes non-current on 19 February).

4.7.3. Recurrency. When the crewmember is non-current in an event for up to 6 months, currency may be regained by demonstrating proficiency under the direct supervision of a current instructor of same crew position. The non-current event is completed as defined in **Attachment 2**.

4.7.3.1. Flight deck crewmembers must regain currency under direct supervision by an instructor in their crew position.

4.7.3.2. A mission crewmember may regain Basic Sortie currency under the supervision of any crew position instructor. Mission Crew Instructors may supervise up to two crewmembers of the same crew position requiring Mission Sortie recurrency. ANOs and AOs may regain currency from an instructor MCS regardless of the instructor's crew position as an AO or ANO.

4.7.4. Loss of qualification. Units will ensure loss of currency for more than 6 months affects qualification as described below. **(T-2)** For those events which result in a loss of qualification, requalification is accomplished as directed in AFMAN 11-202V1.

4.7.4.1. Loss of currency for more than 6 months in any event making the crewmember non-current in the aircraft results in loss of basic qualification. A QUAL evaluation is accomplished to regain basic qualification. These items are identified in the RTM at **Attachment 2**, note 3.

4.7.4.2. Loss of mission sortie or AMT preflight currency for more than 6 months results in loss of mission qualification. A mission evaluation is accomplished to regain mission qualification.

4.7.4.3. Loss of pilot AAR currency for more than 6 months makes the pilot unqualified for AAR. Qualification is regained on an in-flight evaluation (SPOT or MSN).

4.7.4.4. Loss of currency in any other event does not affect qualification. Retraining and recurrency are at the discretion of the SQ/CC.

4.7.5. Ground Training. Units must ensure overdue ground training requirements are satisfied before a crewmember is considered qualified and current to perform tasks applicable to that type of training. **(T-2)** Ground training not affecting CMR status does not require regression from CMR, although it may result in grounding until training is completed (e.g., aircrew flight equipment currency training). Duration of grounding and status of sortie lookback determines the effect on CMR status.

4.8. Event Credit. Credit events accomplished on satisfactory qualification, requalification, instrument, mission, and special mission evaluations towards individual training and currency requirements. BAQ Flight Crew undergoing MQT will log non-RAP events listed in the RTM at **Attachment 2** if accomplished during MQT flights. **(T-2)**

4.9. Regression.

4.9.1. CMR/BMC Regression for Failure to Meet Lookback. Lookback requirements are listed in the RTM at **Attachment 2**.

4.9.1.1. RAP lookback requirements are treated as an ongoing process independent of RAP training cycle. Crewmembers who meet 1-month and 3-month lookback requirements without completing RAP training cycle requirements will be handled IAW **Paragraph 4.10**. **(T-3)**

4.9.1.2. Non-RAP events may not be used for lookback.

4.9.1.3. Failure to meet 1-month sortie lookback requires a review of the crewmember's 3- month sortie history. If the 3-month sortie lookback has been met, the SQ/CC may allow the individual to remain CMR/BMC. Failure to meet this 3-month lookback requires the SQ/CC to either place the individual on probation for 1 month, regress the individual to N-CMR/N-BMC (as applicable), remove the crewmember from a CMR manning position, or initiate action to remove the crewmember from active flying status. If probation is chosen, the only way to remove the individual from probation and preserve current status is to reestablish a 1-month lookback at the end of the probation period (see **Figure 4.1**.). Units will ensure probation and regression are documented in the individual's training record by Memorandum for Record following the sample formats in **Attachment 6**. **(T-3)**

4.9.1.4. CMR/BMC crewmembers regressed to N-CMR/N-BMC for lookback must complete a SQ/CC-approved recertification program that ensures the individual returns to CMR/BMC standards. **(T-3)** As a minimum, this consists of one RAP sortie. Upon completion of the recertification program, CMR/BMC crewmembers must also meet the subsequent 1-month lookback requirement prior to reclaiming CMR/BMC status. **(T-3)** The sorties and events accomplished during the recertification program are credited towards their total sortie and event requirements for the training cycle, as well as their monthly sortie requirement.

4.9.1.5. Lookback computations begin after designation as CMR/BMC. Crewmembers must maintain 1-month lookback requirements until a 3-month lookback is established. **(T-3)**

4.9.2. Crewmembers who fail a qualification, instrument, or mission evaluation will be handled IAW AFMAN 11-202V2, and ACCMAN 11-2EC-130HV2. These individuals regress to N-CMR/N-BMC, as applicable, and remain in N-CMR/N-BMC status until successfully completing required corrective action, reevaluation, and recertification by the SQ/CC.

4.9.3. See **Figure 4.1** for Regression Flow Chart.

4.10. End-of-Cycle Requirements.

4.10.1. Crewmembers failing to complete sortie and/or event requirements by the end of the training cycle may require additional training. **Paragraph 4.11** dictates proration criteria. Units must report mass training shortfalls IAW **Paragraph 1.2.3.12**. **(T-2)**

4.10.2. Crewmembers failing to meet total non-RAP sortie/event requirements are considered noncurrent for the sorties/events not completed and may not perform those sorties/events except under instructor supervision to regain currency. Recurrency requirements are listed in **Paragraph 4.7**.

4.10.3. Crewmembers failing to meet RAP training cycle requirements will be regressed to N-CMR/N-BMC unless lookback is maintained, or the SQ/CC determines the deficiency is not significant. **(T-3)** To regain CMR/BMC, regressed crewmembers will complete all deficient events. **(T-3)** Events may be counted against requirements for the new training cycle.

4.10.4. Crewmembers failing to accomplish sorties/events required for special mission capabilities or qualifications are considered non-current for those capabilities or qualifications and must perform those sorties/events under instructor supervision to regain currency. **(T-3)**

4.11. Proration of End-of-Cycle Requirements. At the end of the RAP training cycle, the SQ/CC may prorate all training requirements when DNIF, on emergency leave, in a non-flying TDY/exercise, or when combat/contingency operations preclude training for portions of the training period. Aircrew should log an event during contingency operations if it meets the requirement for effective training per this regulation and the RTM. Normal annual leave is not considered for proration. Aircraft unavailability and extended bad weather precluding units from flying for more than 15 consecutive days can be considered for proration.

4.11.1. Proration is only used to adjust for genuine circumstances of non-availability, not to mask training or planning deficiencies. The following guidelines apply to proration of training.

4.11.1.1. Determine number of months to prorate based on cumulative calendar days of non-availability for flying using **Table 4.2**.

4.11.1.2. If RQT is accomplished, a crewmember's training cycle starts over at the prorated share of training remaining.

4.11.1.3. Round prorated fractions less than 0.5 to next lower whole number, not lower than one.

4.11.1.4. Crewmembers achieving CMR/BMC after the 15th of the month are considered to be in CT the first day of the following month for proration purposes.

4.11.1.5. A crewmember's last month on station prior to departing PCS may be prorated. Individuals departing PCS may be considered CMR for reporting purposes for up to 60 days after last flight, until loss of CMR currency, port call, or sign-in at new duty station.

4.11.1.6. CMR crewmembers attending USAF Weapons School (USAFWS) courses in TDY and return status and/or participating in actual flying contingency operations may be reported as CMR. Upon return, those crewmembers will accomplish a prorated share of sortie/event requirements. **(T-3)**

4.12. Retraining. AFMAN 11-202V1, specifies retraining restriction before separation, retirement, or mandatory inactive flying status.

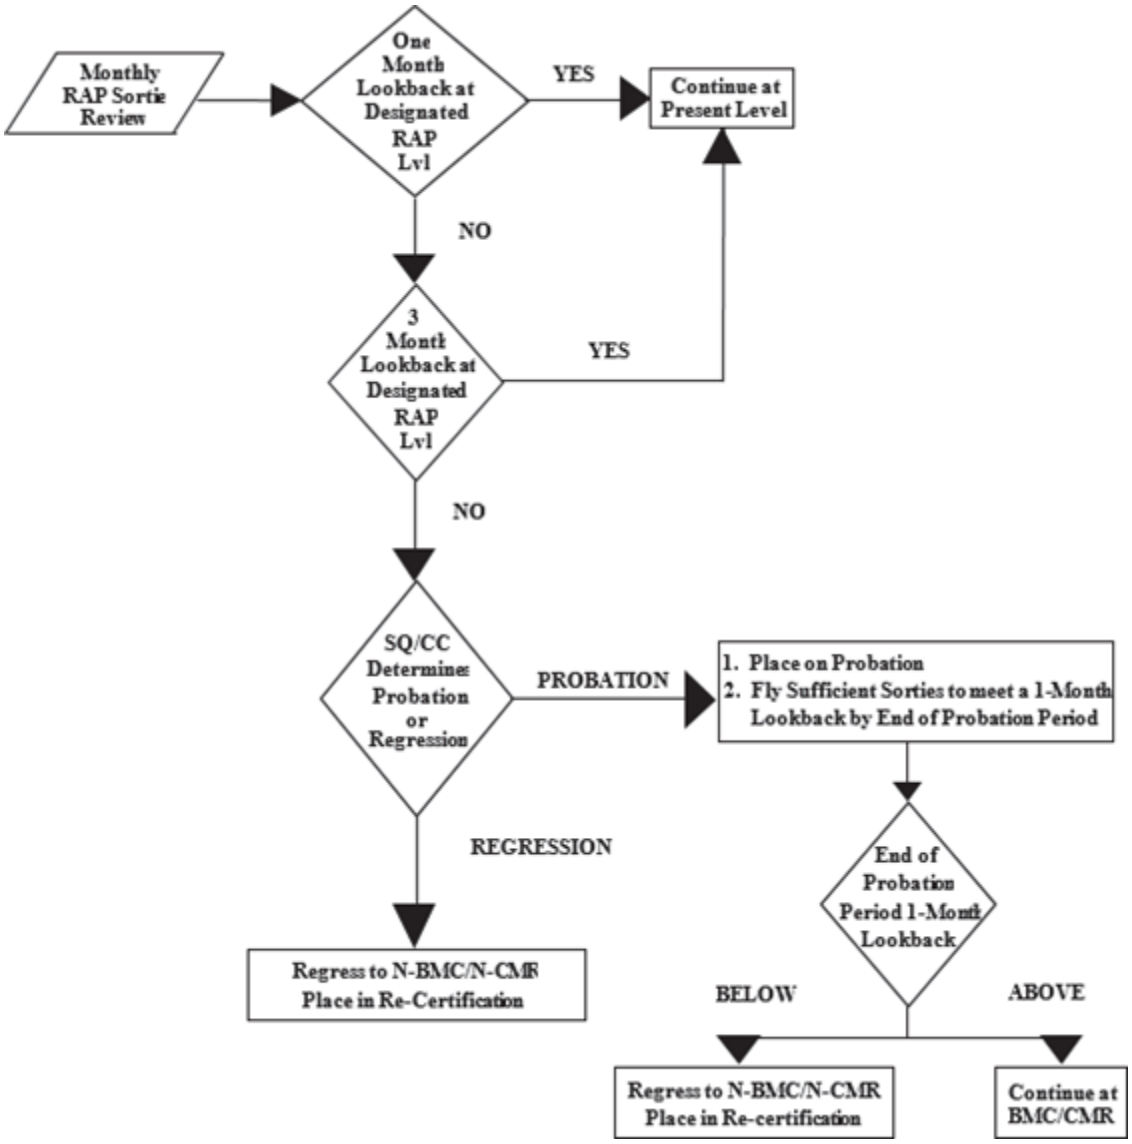

Table 4.2. Proration Allowance.

Cumulative Days of Non-Flying	Months of Proration Allowed
0 - 15	0
16 - 45	1
46 - 75	2
76 - 105	3
106 - 135	4
136 - 165	5
166 - 195	6
196 - 225	7
226 - 255	8
256 - 285	9
286 - 315	10
316 - 345	11
346 - 365	12

Table 4.3. Event Proration Calculation Table (based on 12-Month RAP Training Cycle).

		Months Remaining After Proration										
		11	**10**	**9**	**8**	**7**	**6**	**5**	**4**	**3**	**2**	**1**
TOTAL ANNUAL EVENTS	**50**	46	42	38	33	29	25	21	17	13	8	4
	40	37	33	30	27	23	20	17	13	10	7	3
	30	28	25	23	20	18	15	13	10	8	5	3
	27	25	23	20	18	16	14	11	9	7	5	2
	23	21	19	17	15	13	12	10	8	6	4	2
	22	20	18	17	15	13	11	9	7	6	4	2
	20	18	17	15	13	12	10	8	7	5	3	2
	18	17	15	14	12	11	9	8	6	5	3	2
	15	14	13	11	10	9	8	6	5	4	3	1
	13	12	11	10	9	8	7	5	4	3	2	1
	10	9	8	8	7	6	5	4	3	3	2	1

Figure 4.1. Regression Flow Chart.

Chapter 5

UPGRADE AND SPECIALIZED TRAINING

5.1. General. This chapter contains information for specialized training and upgrade. This training applies to crewmembers upgrading to instructor or flight examiner, positional upgrades, and AME training.

5.1.1. The flying time prerequisites for upgrade are based on a crewmember having gained the knowledge and judgment required to safely and effectively perform assigned duties in support of the unit's missions. Therefore, it is essential that unit-level training programs focus efforts to develop each crewmember's knowledge and judgement as he/she progresses through their flying career.

5.1.2. General Requirements for Formal Upgrade Courses. The following items are basic requirements for formal upgrade training programs (not all-inclusive).

5.1.2.1. Completion of applicable ground and flying requirement required by this publication.

5.1.2.2. Completion of academic prerequisites and special requirements detailed in the Education & Training Course Announcement (ETCA) or formal course syllabi.

5.1.2.3. In-depth knowledge of aircraft systems, operating policies, governing instructions, and applicable tactics, techniques, and procedures for the MWS.

5.1.2.4. Achieve the minimum flying hour prerequisite.

5.1.3. Waiver Authority for Formal Course Prerequisites. 55 ECG/CC is the designated waiver authority for flying-hour prerequisites required for entry into formal upgrade courses. Consult the course syllabus and/or the organization establishing the requirements for other waiver authority determinations.

5.2. Upgrade Training Time Limits. Crew members upgrading to instructor must complete training within 120 days of the class start date. **(T-3)** Exceeding 120 days requires notification to ACC/A3 through ACC/A3C with name, rank, reason for delay, planned actions, and estimated completion date.

5.3. C-130 FTU Training Quota Management. 42d Electronic Combat Squadron Training (42 ECS/DTC) will manage 55 ECG training quotas at the Basic C-130 FTU at Little Rock AFB. **(T-2)** Squadron quarterly Training Review Boards will submit requirements to 42 ECS/DTC for assignment. **(T-3)**

5.3.1. Shortages of available training quotas may require In-Unit Upgrade for courses taught at the Basic C-130 FTU at Little Rock AFB. Waiver requests for In-Unit administration of these courses should be sent to ACC/A3C IAW **Paragraph 1.9.5** using the format detailed in **Attachment 5**. Fill all available Basic C-130 FTU quotas prior to requesting waivers.

5.3.2. Units ensure individuals completing In-Unit Upgrade incur an Active Duty Service Commitment IAW AFMAN 36-2100, *Military Utilization and Classification.*

5.3.3. Use only approved contract courseware to complete in-unit training.

5.4. Aircraft Commander (AC).

5.4.1. General. Commanders will consider experience, knowledge, and judgment prior to certifying a pilot as an AC and designating a pilot as pilot-in-command on the flight authorization. **(T-3)** Pilots will normally be certified as an AC after completion of AC MQT. **(T-3)** In addition, cross-flow pilots must complete upgrade training designated in **Paragraph 5.4.3** prior to AC certification. **(T-3)** All AC Certification is documented in the individual's training record.AC Candidacy.

5.4.2. AC Candidate. An AC candidate is an individual designated by the squadron commander for entry into training before a formal AC upgrade course. Commanders will consider pilot experience, knowledge, and judgment prior to identifying an individual as an AC Candidate. **(T-3)** AC candidate certification is documented in the individual's training record. Prior to designation as an AC candidate, Pilots must:

5.4.2.1. Meet the flying hour prerequisites in **Table 5.1** for AC Upgrade.

5.4.2.2. Complete the Co-Pilot Electronic Attack Development Guide. **(T-3)**

5.4.2.3. Be identified by the SQ/CC as eligible for upgrade at the Squadron quarterly Training Review Board.

5.4.3. Mobility Pilot Development (MPD).

5.4.3.1. MPD Graduate CT. Units should seek to optimize the mix and volume of MPD Graduate training during their upgrade process to AC. The entire time from completion of training to AC certification should focus on the skills required to be an EC-130H AC. This includes both left and right-seat skills and duties. Unit commanders and operations officers should fly MPD Graduates in either seat (within restrictions outlined in the supplement to this publication) to develop balanced skills and maintain accurate quantitative and qualitative data to monitor individual progress.

5.4.3.1.1. MPD Graduates receive a unit-specific Co-Pilot Electronic Attack Development Guide upon initial qualification. Supervisors will monitor progression through the guide, training continuity, and quality of training. **(T-3)** MPD Graduates must demonstrate complete and in-depth knowledge to earn a subject matter signature in the Co-Pilot Electronic Attack Development Guide. **(T-3)**

5.4.3.1.2. Mix and Volume of Flying Training. Units should season MPD Graduates in both seats while achieving an overall flight-hour goal to allow the pilot to upgrade to AC. Items of interest include type of mission and left-seat versus right-seat time. Pilot proficiency and mission sorties should aim for equal seat distribution. Attempt to give MPD Graduates as much practice in the contact position as possible. See ACCMAN 11-2EC-130HV2, for flight evaluation guidance.

5.4.3.1.3. Tracking Progress. Units should seek sufficient data to monitor MPD Graduate progress. The responsibility for this feedback begins with the line IPs and ACs who fly training and operational missions with them. Training offices should immediately enter MPD Graduates into a training program to monitor their progress.

5.4.3.1.4. Document this progress in individual training records. A periodic IP progress sortie, culminating in ACC Form 206, should be scheduled to provide formal

feedback to the MPD Graduate. Squadron schedulers should attempt to schedule MPD Graduates on a variety of mission types for the progress sortie.

5.4.3.2. MPD Graduates complete the Co-Pilot Electronic Attack Development Guide prior to consideration for AC upgrade. MPD Graduates will upgrade to AC via the CCALLACUG course. **(T-2)** Upon completion, pilots are given an in-flight mission evaluation. These pilots may be AC certified by the SQ/CC upon successful completion of the mission evaluation. A SQ/CC certified mission AF Form 8 documents AC certification.

5.4.3.3. Cross-flow Pilot Upgrade Plan. After completion of IQT, enter cross-flow pilots in the following training program, designed to season and experience them as EC-130H pilots. Normally, these individuals will not be restricted to the right seat as left-seat experience is vital to progression. **(T-3)** When flying in the left seat, cross-flow pilots will be under the direct supervision of an instructor during critical phases of flight. **(T-3)**

5.4.4. Cross-flow Pilot Upgrade Plan. After completion of IQT, enter cross-flow pilots in the following training program, designed to season and experience them as EC-130H pilots. Normally, these individuals will not be restricted to the right seat as left-seat experience is vital to progression. **(T-3)** When flying in the left seat, cross-flow pilots will be under the direct supervision of an instructor during critical phases of flight. **(T-3)**

5.4.4.1. Cross-flow pilots may be certified as ACs upon completion of IQT. However, cross-flow pilots with a dissimilar background (e.g., Operational Support Airlift/First Assignment Instructor Pilot, F-16) will attain 100 hours EC-130H primary/secondary time as a mission pilot prior to AC certification. Cross-flow pilots with a similar skill set (e.g., RC-135, E-3, MC- 12) are exempt from this 100 hours requirement. The 55 ECG/CC may waive this requirement on a case-by-case basis provided cross-flow pilots have completed IQT and demonstrate the necessary skill-set expected of an EC-130H certified AC. Document training and certification in the individual's training record. Cross-flow pilots must complete the EC-130H Cross-Flow Pilot Development Guide prior to selection for instructor pilot upgrade. **Table 5.1** does not apply to previously qualified ACs from other airframes.

5.4.4.2. Cross-flow pilots may log RAP and non-RAP events and currencies in either seat prior to AC certification.

Table 5.1. AC Upgrade Flying Time Prerequisites.

Total Hours [1, 2, 4, 5]	C-130 Hours [4, 5]
>1300	300
<1300	800

Notes (*This table does not apply to previously qualified ACs from other airframes. Reference* paragraph 5.4.3.1 *from above.*):

1. Includes OFT/WST. Does not include UPT student flying time.
2. Does not include RPA time.
3. WST hours count as C-130 hours and count towards total hours.
4. Total Hours and C-130 Hours can be waived by 55 ECG/CC.
5. "Other" flying time counts toward no more than 10% of these requirements.

5.5. Mission Crew Positional Upgrades.

5.5.1. Mission Crew Supervisor (MCS).

5.5.2. MCS Candidacy. SQ/CCs will consider ANO/AO experience, knowledge, and judgment prior to identifying an individual as an MCS candidate. **(T-3)** Prior to designation as an MCS candidate, ANOs/AOs must:

5.5.3. Meet the flying hour prerequisites in **Table 5.2** for MCS Upgrade.

5.5.4. Complete the corresponding Electronic Attack Development Guide. **(T-3)**

5.5.5. Be identified by the SQ/CC as eligible for upgrade at the Squadron quarterly Training Review Board.

Table 5.2. Mission Crew Upgrade Flying Time Prerequisites.

Crew Position	Total Hours[1, 2]	EC-130H Hours
MCS	300	150

Notes:

1. Includes CCMCS time
2. Total Hours and EC-130H hours may be waived by ECG/CC

5.6. Instructor Upgrade. SQ/CCs will personally review each instructor candidate's qualifications to ensure the individual possesses skills necessary to upgrade to instructor. **(T-3)** Instructor candidates must be considered Experienced as listed in **Table 1.1** and meet the hour requirements listed in **Table 5.3**. **(T-2)**

5.6.1. ACs and FEs.

5.6.1.1. ACs and FEs must complete the in-unit Instructor Preparatory Exam prior to starting instructor upgrade training. **(T-3)** Courseware is available from the 42 ECS. Individuals not completing the exam require ACC/A3C waiver to attend training. 42 ECS administers the Instructor Preparatory Exam. The individual's flying squadron administers flight training.

5.6.1.2. ACs and FEs normally attend the C-130 FTU as the primary method for initial instructor upgrade training.

5.6.1.3. Waiver requests for In-Unit Upgrade to instructor should be sent to ACC/A3C IAW **Paragraph 1.9.5** using the format detailed in **Attachment 5**. Units must ensure that individuals completing In-Unit Upgrade incur an Active Duty Service Commitment IAW AFMAN 36-2100.

5.6.1.4. Instructors may instruct basic C-130 events upon completion of an initial instructor evaluation and difference training in the EC-130H. They may be certified to instruct RAP and other additional events IAW **Paragraph 5.7**.

Table 5.3. Instructor Upgrade Hour Requirements.

Crew Position	Total Hours [9]	C-130 Hours [9]
AC 8	1600[1,2,6]	300[2,3,7]
	1300[1,6]	500[3,7]
Navigator	800[1]	300[7]
Flight Engineer	2000[1]	200[7]
	700[1]	400[7]
AMT	750	300
	450	450
MCC	650	500[4]
MCS/ANO/AO	300[4,5]	150[4,5]

Notes:

1. Includes OFT/WST. Does not include undergraduate student flying time.
2. Requirements apply to cross-flow pilots.
3. ACs must possess a minimum of 200 C-130 hours after certification as Aircraft Commander. **(T-3)**
4. EC-130H/CCMCS hours.
5. ANO/AO instructors that upgrade to MCS are required to complete 10 events as MCS prior to certification as an instructor at the MCS position. **(T-3)**
6. Does not include RPA time; can be waived by 55 ECG/CC.
7. WST counts towards C-130 hours for AC, NAV, FE
8. "Other" flying time counts towards no more than 10% of these requirements.
9. Total Hours and C-130 Hours may be waived by the 55 ECG/CC

5.6.2. Navigators, Mission Crew and AMTs.

5.6.2.1. Navigators, mission crew (MCC, MCS, ANO and AO) and AMTs complete initial instructor upgrade training at the 42 ECS using the ACC/A3-approved syllabus. Local training restrictions may require courseware modification and deviations from the syllabus.

5.6.2.2. ANOs and AOs with verifiable instructor experience and two years at an operational site may use that experience as a basis for requesting waivers to the flying time prerequisites outlined in **Table 5.3**.

5.6.2.3. Navigator, mission crew and AMT instructors may instruct upon completion of an initial instructor evaluation IAW AFMAN 11-202V1 and ACCMAN 11-2EC-130HV2.

5.6.3. Instructor Requalification. Prior to requalification, instructors will satisfactorily complete ground training IAW **Paragraph 5.7**. **(T-2)**

5.6.3.1. Previously qualified AC, navigator, or flight engineer instructors in any C-130 MDS, including the EC-130H, who have been unqualified for more than 2 years, must requalify in-unit, using the flying portion of the ACC/A3-approved syllabus. **(T-3)**

5.6.3.2. Previously qualified COMPASS CALL navigators, mission crewmembers and AMT instructors, who have been unqualified for more than 2 years, must requalify in-unit using the flying portion of ACC/A3-approved syllabus. Previously qualified MCSs may requalify by completing the academics portions of the ANO/AO syllabi and proceeding to the corresponding MCS upgrade syllabi. **(T-3)**

5.6.3.3. Requalification of previously qualified C-130/EC-130H instructors, unqualified for less than 2 years, is at SQ/CC's discretion.

5.6.3.4. Requalified instructors may instruct upon completion of an instructor evaluation.

5.6.4. Instructor Transfers. Crewmembers who were instructor certified in any US Air Force aircraft and have previously attended a formal instructor qualification course for instructor qualification are eligible for upgrade to EC-130H instructor using provisions of this paragraph.

5.6.4.1. ACs, navigators, and FEs who previously attended a formal instructor course for instructor qualification, were instructor qualified in any US Air Force aircraft, are experienced per **Table 1.1**, and meet the hour requirements listed in **Table 5.3** may upgrade in-unit without an In-Unit Upgrade waiver. Unit commanders will determine training required for upgrade and may require formal course attendance. In-Unit upgrade requires 55 ECG/CC approval. **(T-3)** Upon completion of training, ACs, navigators, and FEs require an initial instructor evaluation.

5.6.4.2. ACs, navigators, and FEs who are qualified C-130 instructors may instruct basic C-130 CT events once they have completed EC-130H difference training. They may be certified to instruct RAP and additional events IAW **Paragraph 5.7** after they have met the flying requirements necessary to be designated as experienced as listed in **Table 1.1**. Mission crew and AMT's who were previously qualified as instructors in other aircraft must be experienced per **Table 1.1** for upgrade to EC-130H instructor. **(T-3)** MCCs will meet the hour requirements listed in **Table 5.3** prior to instructor upgrade. **(T-3)** In-unit upgrade requires 55 ECG/CC approval. Upon completion of training, mission crew and AMTs require an initial instructor evaluation.

5.6.4.3. Requalified instructors may instruct upon completion of an RQ instructor evaluation.

5.6.5. Crew Resource Management (CRM). All instructors will complete instructor CRM training prior to assuming duties as an instructor. **(T-2)** Instructor CRM is a one-time requirement and is included in all instructor upgrade syllabi as a 2-hour block of instruction. Initial instructor candidates receive this training as part of the formal instructor upgrade course. Aircrew members who have previously completed a MAJCOM-approved Instructor Qualification Course will complete instructor CRM training prior to entering instructor upgrade training. **(T-2)** If contractor training is not available before or during the period of instructor upgrade, waivers can be requested IAW AFMAN 11-290, *Cockpit/Crew Resource*

Management and Threat & Error Management Program, until the next available training date but NLT 1 year after upgrade. Aircrews taking the instructor CRM training will receive credit biennial refresher training. **(T-2)** Squadron Training shops will file instructor CRM training documentation in student training folder before certification on the LOX.

5.6.6. Mission Instructor Certification (All Crew Positions). Prior to certification for instructing mission events in the EC-130H, individuals will complete training on AFMAN 11-2EC-130HV1, crew position syllabi, and meet CT standards (administered by the 42 ECS). **(T-3)** Units must ensure initial upgrades and in-unit upgrades comply with this paragraph. **(T-3)**

5.6.6.1. Pilots and FEs. Pilots and FEs will complete a 55 ECG Group Training Plan or ACC approved syllabus, managed, and administered by 42 ECS, prior to instructing mission events (including AAR) in the EC-130H. **(T-3)** Place individuals on the letter of restrictions until completing certification. Document certification in the individual's permanent flying training folder. **(T-3)**

5.6.6.2. Crewmembers already qualified as instructors before upgrading to MCS will not instruct in the upgrade position (MCS) until they have been certified as an MCS instructor. **(T-3)** Prior to certification, they must complete 10 mission sorties (EC-130H or CCMCS) as an MCS and one certification sortie with an instructor MCS, validating instructional abilities in the MCS position. Document this certification in individual training records. **(T-3)**

5.6.6.3. MCS-qualified crewmembers who complete instructor upgrade training may instruct in the ANO/AO and MCS positions.

5.7. Flight Examiner Upgrade. Flight examiner upgrade is IAW AFMAN 11-202V2, as supplemented.

5.8. Specialized Mission Equipment Certification. The 755 OSS will coordinate with the 42 ECS to develop training plans to include certification and currency requirements. **(T-3)**

5.9. Additional Event Training/Certification.

5.9.1. Air-to-Air Refueling. Training is normally accomplished in conjunction with IQ. If not accomplished in IQ, designation as CMR is after AAR Qualification. When training is conducted outside ACC formal IQ syllabi, squadrons will use the flying portion of the syllabi or a SQ/CC approved training plan for AAR qualification. **(T-2)** AAR requires evaluation IAW AFMAN 11-202V2, and ACCMAN 11-2EC-130HV2.

5.9.2. Touch-and-Go (T&G) Landings. T&G landings are a qualification item for all ACs. They are evaluated on initial qualification evaluations and all recurring evaluations. However, ACs must be certified by their squadron commander to monitor an uncertified pilot's T&G landings. **(T-3)** Certification is documented in individual training records **(T-3)**

5.9.2.1. ACs will complete the following training program prior to T&G landing certification:

5.9.2.1.1. Successfully complete the 42 ECS approved T&G test prior to the T&G certification flight. **(T-3)**

5.9.2.1.2. One hour of ground training and one WST where IPs will discuss and demonstrate various EPs and unique situations encountered during touch T&G landings. ACs will sit both left and right seats controlling and supervising a T&G. Can be "table topped" with SQ/CC approval. **(T-3)**

5.9.2.1.3. One certification flight with an IP. During this certification flight, the AC will perform a minimum of three T&G landings. **(T-3)** These landings are a combination of pilot-flying and pilot-monitoring duties while executing 100% and 50% flap configuration T&G landings. In addition, the instructor will fly a poorly executed approach to drive a go-around call. **(T-3)** Emphasis is placed on aircraft control and traffic pattern checklist discipline.

5.9.2.2. ACs, cross-flow pilots, and MPD Graduates may perform T&G landings from either seat when the other seat is occupied by an AC certified to supervise T&G landings.

5.9.3. Commanders may identify other events for which they determine an additional certification and training is necessary. Channel requests for training plans and certification standards to 755 OSS.

DAVID G. SHOEMAKER, Major General, USAF
Director of Operations

AF/A3TP—Air Force Integration Division

Terms

Academic Training—A course of instruction that includes, but is not limited to, classroom instruction related to aircraft systems and operation, flight characteristics and techniques, performance, normal procedures, abnormal and emergency procedures, and various CT requirements.

Aircraft Commander (AC)—A pilot, certified by the SQ/CC, to perform "pilot-in-command" duties.

Aircrew Training Device—Hands-on training aids that includes cockpit familiarization trainer (CFT), cockpit procedures trainers (CPT), part-task trainers (PTT), weapon system trainers (WST), and simulators.

Aircrew Training System—An integrated qualification, upgrade, and CT program for crewmembers. Civilian contractors provide courseware for use in the field, as well as instruction and aircrew training device training at the Basic C-130 FTU and various simulator locations. All flight training is conducted by Air Force instructors.

Alternate Mission Equipment (AME)—Equipment that may or may not be loaded on the COMPASS CALL aircraft, depending on mission requirements. However, CT will be required, and the system is logistically supported via technical orders, flight manuals, spare parts, etc. AME are normally maintained by USAF maintenance personnel.

API 6—Aircrew Position Indicator Code that applies to rated staff or supervisory positions at wing level and below that have responsibilities and duties that require the incumbents to actively fly. Includes flying squadron commander and operations officer positions.

API 8—Aircrew Position Indicator Code that applies to rated staff or supervisory positions above wing level that have responsibilities and duties that require the incumbents to actively fly.

Attrition Sortie—A sortie planned and launched as a RAP training sortie, non-RAP sortie, or collateral sortie, that due to circumstances such as weather, an IFE, maintenance, etc. fails to accomplish that planned mission. Improper accounting of these sorties will result in improper

sortie allocation, stresses to the unit schedule, and negative impacts on the quality of unit training programs.

Basic Mission Capable (BMC)—A crewmember who has satisfactorily completed MQT, is qualified in some aspect of the unit's mission, but does not maintain CMR status. The crewmember must be able to attain full qualification to meet operational taskings within 30 days.

Basic Aircraft Qualified (BAQ)—A crewmember who has satisfactorily completed IQ/RQ (IQT) training and is qualified to perform aircrew duties in the unit aircraft. The member must perform at the minimum frequency necessary to meet the most recent sortie and flight standards set for that specific weapons system.

Baseline Certification—Process used for COMPASS CALL crewmembers certified in multiple baselines of the EC-130H. Training will be documented in the individual's training record. The certification letter (Letter of Xs) will indicate which baselines the crewmember is certified (e.g., Baseline 2.5) to operate.

Certification—The process of certifying crewmembers with certain skills or capabilities in a specified sortie/event/procedure.

Cockpit Procedures Trainer—A training device in which instruments and displays are activated to respond to trainee inputs. Used for safety of flight, instrument, normal, and emergency procedures.

Combat Mission Ready (CMR)—The status of a crewmember who has satisfactorily completed MQT and maintains qualification and proficiency in all basic unit missions.

COMPASS CALL—A uniquely configured aircraft designated the EC-130H and designed to perform Electronic Warfare (EW), Suppression of Enemy Air Defenses (SEAD), and Information Operations (IO) missions.

COMPASS CALL Analysis and Targeting Team (CCATT)—A team of intelligence analysts who are part of the Mission Planning Cell and are integral to the target analysis and selection process. These individuals also build cryptologic targeting aids and interface with the cryptologic intelligence community to meet Mission Planning Cell (MPC) requirements. The CCATT is a COMPASS CALL Support Team with expanded scope, connectivity, and enhanced EW targeting responsibilities.

COMPASS CALL Support Team—A team of IO analysts who assist in the target analysis and selection process. The analysts are qualified in the use of the Mission Support Facility and C2WPC.

Continuation Training (CT)—Ground and flying training applicable to all crewmembers. Used to maintain proficiency and improve aircrew capabilities to perform unit missions and is generally flown on proficiency sorties not used for formal syllabus missions, flight tests, and evaluations.

Contract Aircrew Training/Courseware Development—An ACC-funded, ACC TRSS-managed contract which provides contractor platform instructors, contractor written courses and syllabi, and contractor developed and instructed CCMCS missions.

Course Training Document—Normally an ACC/A3-approved course syllabus.

Critical Phases of Flight—Take-off, AAR (within ¼ NM of tanker), approach to landing, landing, flight below 3,000 feet AGL, or any flight maneuver stipulated in ACCMAN 11-2EC-130H-series

manuals specifically requiring direct instructor supervision for qualified or unqualified crewmembers.

Cross-Flow Pilot—Pilot gained from another MDS. Cross-flow pilots have no prior C-130 pilot qualification.

Currency—The minimum frequency required to safely perform an event or sortie.

Direct Supervision—A crewmember is considered under direct supervision when flying with an instructor in the same crew position. An IP must occupy one of the pilot seats when a pilot requires direct supervision, while for other crew positions the instructor must be readily available to assume primary crew duties if necessary.

Event—The accomplishment of a specific training element, function, or task.

Experienced/Inexperienced Aircrew—A designation used to determine the level of training a crewmember receives within the Ready Aircrew Program. (See **Table 1.1**.)

Flight Crew—Crewmembers whose primary responsibility is the safe ground and flight operation of an EC-130H aircraft. These members consist of the AC, pilot, navigator, FE, and AMT.

Formal IQT/RQ—Formal IQT/RQ training performed at a FTU according to an approved syllabus (ACC or AETC).

Formal School Courseware—Training materials and programs developed for training crewmembers at formal schools. It includes all student study guides, workbooks, computer-based training lessons, slide tape lessons, instructor guides, and applicable AF Forms for documenting training.

Initial Qualification Training (IQT)—Training to qualify in basic aircraft operations and the mission profiles of the EC-130H. IQT is a prerequisite for attaining BAQ status.

In-Unit IQT/RQ/Upgrade—Formal training administered by the 42 ECS that is normally performed at the Basic C-130 FTU. Also referred to as the secondary method at LRAFB.

Low Altitude Tactics—Day or night tactical operations below 3000 feet AGL. (Also known as low level flying.)

Mission Crew—Crewmembers whose primary in-flight duties are to execute airborne electronic attack (e.g., electronic warfare, SEAD) as performed from the mission crew compartment of a COMPASS CALL aircraft. Members consist of the MCC, MCS, AO, and ANOs.

Mobility Pilot Development (MPD) Graduate—Crewmember qualified to perform pilot duties from either seat. “MPD” is the initial level of C-130 pilot development for graduates of Undergraduate Pilot Training (UPT). During initial training, MPD Graduates are trained and evaluated mainly on left-seat pilot-flying duties and right-seat pilot-not flying duties. MPD Graduates arrive in unit with qualification to fly in either seat. These pilots have been trained and formally evaluated on all flight maneuvers common to a traditional AC, to include simulated engine-out and no-flap work under the supervision of an IP. MPD Graduates may fly in either seat with a 100-hour AC in the other seat.

Mission Qualification Training—Training which is required to achieve a basic level of competence in a squadron's primary tasked missions.

Night Event—Events accomplished during the period between the end of evening civil twilight and the beginning of morning civil twilight IAW DAFMAN 11-401 and DAFMAN 11-401_ACCSUP, *Aviation Managment*.

Operational Flight Trainer—A training device that dynamically simulates flight characteristics. Used for normal, emergency, and instrument procedures, to include safety of flight, war fighting tasks, and skills integration training. Also known as a weapons system trainer.

Pilot-in-Command (PIC)—The pilot responsible for the operation and safety, both on the ground and in flight, of an aircraft. Will be a current and qualified AC and designated on the flight authorization as in command.

Proficiency—Demonstrated ability to successfully accomplish tasked events safely and effectively. For purposes of this publication, proficiency also requires currency in the event, if applicable.

Quick Reaction Capability (QRC)—Equipment that has been quickly developed and fielded in response to an operational need. QRCs may or may not be loaded on the COMPASS CALL aircraft, depending on mission requirements. Only minimal training is provided during fielding and the system is NOT logistically supported via technical orders, flight manuals, spare parts, etc. QRCs may eventually become AME, but that is not always the case. Minimal CT may be directed if the QRC is designated a Special Capability. QRCs are normally maintained by contractor field-service representatives.

Ready Aircrew Program (RAP)—ACC directed EC-130H COMPASS CALL CT program that provides the baseline training requirements for use in developing a realistic training program tailored to EC-130H COMPASS CALL specific requirements.

Situational Emergency Procedures Training (SEPT)—A discussion and review of abnormal/ emergency procedures and aircraft systems operations/limitations based on realistic scenarios.

Specialized Mission Equipment—Equipment on-board some but not all COMPASS CALL aircraft; not including QRC or AME.

Specialized Fueling Operations-—Basic hot refueling is the transfer of fuel (refuel or defuel) with aircraft engines running at sites where all required equipment is provided.

Specialized Training—Training in specialized tactics/sorties/events/equipment done in addition to MQT and CT.

Supervised Status—Crewmember will fly under instructor supervision as designated by the squadron commander or an evaluator.

Squadron Supervisors—SQ/CC, Operations Officer, Assistance Operations Officers, and Flight CCs.

Verification—A ground training process aimed at ensuring a crewmember's tactical employment knowledge. Verification is a unit tactics program conducted in initial training. Initial verification occurs after IQT at the discretion of the operations SQ/CC as required.

Visual Threat Recognition and Avoidance Trainer (VTRAT)—An automated virtual intelligence instructional training aid designed to introduce or refresh visual scanners on their duties during an anti-aircraft threat engagement.

Attachment 2

GLOSSARY OF MISSION/SORTIE AND EVENT DEFINITIONS

A2.1. Sortie and Event Definitions.

A2.1.1. Air-to-Air Refueling (AAR).

A2.1.1.1. ACs and cross-flow pilots must accomplish closure to a tanker from 1/4 NM and 5 minutes of cumulative contact time. Only one AAR event (day or night) may be logged on a given sortie for each crewmember.

A2.1.1.2. MPD Graduates must maintain pre-contact for 2 minutes.

A2.1.1.3. Navigators must accomplish all applicable AAR checklists and accomplish a timing solution to a point on a planned air refueling sortie (navigator duties do not require the tanker to be present in order to credit an AAR event).

A2.1.1.4. FEs must occupy the flight engineer seat and operate the AAR panel for at least one contact.

A2.1.1.5. AMTs will perform appropriate duties during AAR and must accomplish all applicable AAR checklists on a planned air refueling sortie.

A2.1.1.6. Night AAR. Accomplish the rendezvous and contact between the end of the evening civil twilight and the beginning of morning civil twilight, IAW DAFMAN 11-401. Dual log with AAR.

A2.1.1.7. Limits Demonstration (Boom). A maneuver performed in the contact position. After gaining limit(s) clearance from the boom operator, PF executes stable-controlled flight from an established central boom position towards one (or multiple) boom limit(s), held/paused, then returned to the central boom position.

A2.1.2. AME System Refresher. Unless otherwise specified in this volume, an AME refresher event requires AME system review with an AME-certified instructor. Requires review of all AME systems in which individual is certified. Dual log with RAP events if accomplished.

A2.1.3. AMT Mission Preflight. Credit an AMT Mission Preflight for accomplishing a complete preflight IAW applicable technical orders, to include bringing up the mission system.

A2.1.4. Basic Sortie. Log basic sorties on designated training or operational missions while performing primary/secondary/instructor/evaluator duties. A basic sortie includes appropriate pre-mission planning, preflight according to flight publications (as applicable), preparation of performance/takeoff and landing data, weather and crew briefings, flight plan filing, and post-mission procedures. Basic sortie may not be logged in the CCMCS.

A2.1.4.1. Pilots and FEs. If more than one crewmember is on board for these crew positions, each may obtain basic sortie credit if they actively participate in required pre-mission and post-mission procedures as described above. Pilots must log primary or secondary time to log a basic sortie.

A2.1.4.2. Navigators. If more than one navigator is on a flight, each may obtain basic sortie credit on the same flight provided each one occupies the navigator position, maintains a log, performs navigator duties, and monitors an approach and landing.

A2.1.4.3. Mission Crew. May log a basic sortie on a pro ride, provided there is an emergency equipment review.

A2.1.5. Expendables Event. Aircrew will preflight, arm and operate the ALE-47 and the AAR-54. The ground mockup may be used when a suitably equipped aircraft is not available. Only one event may be logged per mission. Mission crew completion of this event may require executing spotter duties.

A2.1.6. Instrument Approach. Conduct approaches IAW AFMAN 11-202V3, *Flight Operations*.

A2.1.7. Landing. Fly a landing of any configuration, full-stop or touch-and-go, from either seat.

A2.1.7.1. Night Landing. Accomplish the landing between the end of the evening civil twilight and the beginning of morning civil twilight, IAW DAFMAN 11-401.

A2.1.7.2. Night Landing will be dual logged with Landing.

A2.1.8. Live Jam. A Live Jam is defined as actively transmitting the weapon system through the transmit antennae (versus into a dummy load or simulated) against COMPASS CALL targets. A Live Jam must be incorporated into a mission planning or an integrated exercise in order for the crew to observe the effects this has when employing the weapon system.

A2.1.9. Local Proficiency Sortie. Local proficiency sorties (LPS) allow pilots to practice instrument, transition, and emergency procedures while under the supervision of an IP (IPs need not be supervised themselves to log an LPS). Complete all maneuvers to an acceptable level of proficiency as determined by the IP to log the LPS. Should weather, maintenance or mission requirements preclude completing the planned profile, the instructor will determine whether the entire LPS will be re-accomplished or just those events not completed. All events do not need to be accomplished on a single sortie. Credit the LPS after completing the last event. Will be dual logged with Basic Sortie. Do not credit an LPS on the same flight as an evaluation. The following are the minimum required maneuvers to credit an LPS (comply with restrictions in **Attachment 3**):

A2.1.9.1. Review of boldface emergency procedures, one precision approach, one non-precision approach, one no-flap approach and landing, one holding pattern or procedure turn, one circling approach (traffic permitting), one simulated engine-out go-around, one simulated engine-out landing, and one Visual Flight Rules (VFR) traffic pattern (weather permitting).

A2.1.9.2. Mission Comms. Credit a Mission Comms event for use of one or any combination of Secure Voice, HAVE QUICK, and Satellite Communications (SATCOM). Every attempt should be made to accomplish all of the following events on every Mission Sortie. A Mission Communications event may be accomplished with any flown sortie or applicable ground trainer.

A2.1.9.3. Secure Voice. Secure voice consists of an aircrew member loading the appropriate COMSEC into the KY-58 or KYV-5, and successfully using the radio in secure mode to both transmit and receive.

A2.1.9.4. HAVE QUICK. Consists of a crewmember correctly loading the word-of-the-day (WOD), accomplishing either a self-start time-of-day (TOD) or receiving a TOD from

an outside source, and successfully using the radio in HAVE QUICK mode to both transmit and receive.

A2.1.9.5. SATCOM. Consists of two-way communication using aircraft SATCOM equipment with live frequencies. Static or in-flight use of equipment is acceptable. If satellite time is not available, loading of the SATCOM equipment IAW 55 ECG HERK HINTS procedures are sufficient.

A2.1.10. Mission Sortie. Credit a mission sortie for training or exercise missions planned and executed to realistically simulate a combat mission. All training sorties will include a training scenario. Mission sorties may be logged on actual combat missions. All mission sorties will include a pre-brief and debrief. Mission sorties require a minimum of two turns on orbit in the primary duty position or while instructing/evaluating. A mission sortie should include a threat reaction (all crew positions) and a malfunction analysis (Mission Crew only). If threat reaction and/or malfunction analysis cannot be completed in-flight, a ground brief of the event should be accomplished. COMPASS CALL missions designated to test weapon system capability/equipment may be logged as a mission sortie at the discretion of the SQ/DO.

A2.1.10.1. Training scenarios should be designed to realistically train for the unit's combat mission and will incorporate crew coordination between flight crew and mission crew, communication procedures, orbit procedures, weapon system employment, and threat reactions.

A2.1.10.2. Mission Crew. Mission sorties may be accomplished either in-flight or in a COMPASS CALL Mission Crew Simulator (CCMCS) and must include (as a minimum) an MCC, MCS, one AO, two ANOs, and an AMT (AMT required if sortie is accomplished in flight). A minimum of 1 hour of primary/instructor/evaluator time must be logged. Will be dual logged with Basic Sortie if completed aboard the aircraft. Mission sorties require system initialization with minimum equipment necessary for the crew to complete the pre-engagement checklist and a minimum of one jam/search cycle. Minimum crew requirement may be waived by 55 ECG/CC; the SQ/CC is the waiver authority for local training sorties.

A2.1.10.3. Malfunction Analysis. Credit a malfunction analysis event for an actual or simulated event requiring proper reaction, crew coordination, and system operation taking into account the tactical situation, and crew/system/aircraft limitations.

A2.1.10.4. Threat Reaction. Credit a threat reaction when accomplishing an actual or simulated event requiring proper reaction, crew coordination, and system operation, taking into account the tactical situation, and crew/system/aircraft limitations. Threat reactions will include actual or simulated defensive maneuvers employed against air and/or ground threats.

A2.1.10.5. WST. Flight Deck members may log Mission Sorties in the WST when instructors/certified personnel are able to provide scenario training.

A2.1.11. Navigation Route. A navigation route requires a minimum of 1 hour of ACCMAN 11-2EC-130H, Volume 3, *EC-130H Operations Procedures,* full navigator log procedures. Each navigator can credit only one Navigation Route per flight, but more than one qualified navigator may obtain sortie credit on the same flight provided each one meets the requirements of a navigation sortie. May dual log with Basic Sortie if all requirements of **Paragraph A2.1.4** and **Paragraph A2.1.4.2** are met.

A2.1.12. RAP Sortie. RAP sorties are used for tracking sortie lookback requirements. Log a RAP sortie only when a RAP event is accomplished. Only one RAP mission sortie may be logged per sortie, but a basic sortie may also be logged provided the basic sortie requirements are met.

A2.1.13. Reverse Taxi. Perform reverse taxi with at least 90 degrees of turn.

A2.1.14. Signals Event. Credit a signals event for a minimum of 2 hours of academic instruction, or programmed self-study. These events will include aural recognition of signals or target system study.

A2.1.15. Special Emitter Array (SPEAR). Event accomplishment requires full mission planning, briefing and employment, with or without actual radiation from the system.

A2.1.16. Takeoff. Fly a takeoff, initial or touch-and-go, from either seat.

A2.1.17. Touch-and-Go Landing. Fly a touch-and-go landing from either seat. Dual log with Takeoff and Landing.

A2.2. Ground Training Event Definitions:

A2.2.1. Aircraft Defensive Systems. Training will be conducted IAW the 55 ECG training certification plan, managed by the 755th Operations Support Squadron Training (755 OSS/OST).

A2.2.2. Aircrew Chemical Defense Task Qualification Training (ACDTQT). ACDTQT is an exercise emphasizing hands-on training, dressed out in partial Aircrew Chemical, Biological, Radiological, Nuclear (ACBRN) equipment. The purpose of the exercise is to enable crewmembers to become aware of their limitations while wearing the equipment. Observers should closely monitor crewmember actions during the exercise as heat exhaustion, fatigue, hyperventilation, limited dexterity, and hampered communication can be experienced during the exercise. The equipment will immediately be removed when the observer or crewmember feels it is unsafe to continue.

A2.2.2.1. Crewmembers will wear the following equipment:

A2.2.2.1.1. Flying helmet

A2.2.2.1.2. MBU-19/P hood and mask assembly with suspension straps.

A2.2.2.1.3. CQU-7/P blower assembly with filter canisters and batteries.

A2.2.2.1.4. MXU-835 intercom assembly.

A2.2.2.1.5. Glove set (cotton, butyl, Nomex®).

A2.2.2.2. Initial ACDTQT requires both ground and flying training. Ground training should mirror instruction provided during ACBRN equipment refreshers, allowing additional time to thoroughly cover the material. Flying training must be conducted on an aircraft. Crewmembers must complete initial ACDTQT during MQT. Initial ACDTQT may be accomplished in the CCMCS with SQ/CC approval.

A2.2.2.2.1. These restrictions apply with the additional requirement that the observer will always be an instructor. Mission crew and AMTs also require an instructor of the same crew position, and ANOs/AOs require an Instructor, I-ANO, I-AO, or I-MCS.

A2.2.2.2.2. Crewmembers who completed initial ACDTQT during a previous tour in any MDS are not required to re-accomplish initial ACDTQT.

A2.2.2.3. ACDTQT Refresher Training. Crewmembers must accomplish this training at their designated crew position. Failure to accomplish ACDTQT results in regression to N-CMR/N-BMC status. NOTE: Mission crew: ACDTQT is preferably conducted in the CCMCS but may be conducted in the aircraft.

A2.2.2.4. When conducting ACDTQT in the aircraft, the following restrictions apply:

A2.2.2.4.1. Only one pilot or flight engineer will be dressed out at any time.

A2.2.2.4.2. An observer will always be assigned to monitor safety and signs of fatigue/stress. Observers will never wear the ACBRN equipment.

A2.2.2.4.3. The AC will be observed by an IP or experienced AC occupying the other seat.

A2.2.2.4.4. All other pilots will be observed by an IP or experienced AC in the other seat.

A2.2.2.4.5. All pilots will review emergency procedures; accomplish at least one take-off, approach, and landing; and complete all associated checklists.

A2.2.2.4.6. FEs will be observed by another flight engineer and wear the gear for at least one take-off, approach, and landing, and complete all associated checklists.

A2.2.2.4.7. Navigators will be observed by another navigator and wear the gear for a minimum of 30 minutes while performing navigator duties.

A2.2.2.4.8. All other crewmembers will demonstrate proficiency or ability to perform wartime duties, and training will include 30 minutes of an in-flight scenario.

A2.2.2.5. When conducting ACDTQT in the simulator, there are no restrictions on which or how many crewmembers may wear the gear. Observation can be provided by other crewmembers or contract instructors as applicable.

A2.2.3. Aircrew Flight Equipment Continuation Training (AFECT). Crewmembers are required to complete AFECT IAW AFMAN 11-301V1 and this volume.

A2.2.3.1. Aircrew Flight Equipment Familiarization (LL01XC). All crewmembers will accomplish training prior to their first flight at home station IAW AFMAN 11-301V1. This is a one-time event, per base assignment, conducted prior to the first flight at home station to familiarize crewmembers with local aircrew life support equipment availability, issue, use, pre-flight, and post-flight procedures. This training will be provided for subsequent re-assignments to the same base.

A2.2.3.2. Emergency Egress Training (EET) (Non-Ejection Seat) (LL03XC). All crewmembers will accomplish EET IAW AFMAN 11-301V1 and this volume. Evaluates aircrew ability to demonstrate proficiency in air and ground emergency egress procedures. Stresses the importance of aircrew coordination, responsibilities, and use of appropriate emergency egress equipment. IAW AFMAN 11-301V1, members must use an actual aircraft to demonstrate proficiency in opening all ground emergency exits. Crewmembers arriving on a PCS who can produce source documentation of currency on this item from

any C-130 MDS are not required to re-accomplish training but must be provided difference training on the EC-130H configuration. Difference training will be provided by squadron Life Support personnel.

A2.2.3.3. ACBRN (LL04XC). All crewmembers will accomplish ACBRN refresher IAW AFMAN 11-301V1 and this volume. Academic and equipment training will provide crewmembers the opportunity to demonstrate their ability to don and doff ACBRN equipment and utilize buddy dressing procedures. This training also includes information on hazards and limitations of wearing the equipment properly and improperly, preflight procedures, aircraft integration, and parachute descent emergency procedures. Each aircrew will demonstrate procedures during their initial class; subsequent classes require a minimum of 10% of aircrew participants to dress out and demonstrate aircrew contamination control area (ACCA) processing procedures.

A2.2.3.4. Egress Training (Non-Ejection Seat) with ACBRN (LL05XC). All crewmembers will accomplish egress training with ACBRN equipment IAW AFMAN 11-301V1 and this volume. Training will be conducted like normal egress training with the added burden of wearing the ACBRN equipment.

A2.2.3.5. Aircrew Flight Equipment Training (AFET) (LL06XC). All crewmembers will accomplish AFET IAW AFMAN 11-301V1 and this volume. Academic and equipment training will provide crewmembers the opportunity to demonstrate their ability to locate, preflight, and use all aircrew and passenger AFE carried aboard the EC-130H or issued to aircrews. Crewmembers arriving on a PCS who can produce source documentation of currency on this item from any C-130 MDS are not required to re-accomplish training but must be provided difference training on the EC-130H configuration. Difference training will be provided by squadron Life Support personnel.

A2.2.3.6. AFE Fit Check (LL07XC). All crewmembers will accomplish initial AFE Fit Check IAW AFMAN 11-301V1, and this volume, as supplemented. AFE gear worn during flight in non-ejection seat aircraft (e.g., helmet and oxygen mask) will be fit checked upon initial assignment, with no periodic refit required. Fit checks will be accomplished concurrently with other training events such as EET (LL02); however, real world equipment is not authorized for use during training.

A2.2.4. CoCCT. Aircrew are required to complete CoCCT IAW AFI 16-1301.

A2.2.4.1. Local Area Survival (LAS) (SS01XC). LAS provides local standard operating procedures preparing aircrew for possible aircraft emergencies near the base of assignment to include local environmental aspects and local recovery procedures. LAS is a one-time requirement prior to first flight at every assignment. Personnel who PCS and then return for subsequent assignments must accomplish this training during each reassignment.

A2.2.4.2. Combat Survival Training (CST) (SS02XC). Aircrew will conduct field escape and evasion exercises and ignite flares. They will discuss global survival, field medical techniques, and the five phases of evasion.

A2.2.4.3. Conduct After Capture (CAC) (SS03XC). Students discuss resistance training, the Code of Conduct, the Uniform Code of Military Justice (UCMJ) and the Articles of the Geneva Convention as they apply to wartime, peacetime government, and hostage detention.

A2.2.4.4. Water Survival Training (WST) (SS05XC). Academic and equipment training will provide crewmembers the opportunity to demonstrate their ability to use EC-130H-specific flotation devices and equipment available during an overwater emergency. Crewmembers arriving on a PCS who can produce source documentation of currency on this item from any C-130 MDS are not required to re-accomplish training but must be provided difference training on the EC-130H configuration. Difference training will be provided by squadron Air Crew Equipment personnel.

A2.2.4.5. Emergency Parachute Training (EPT) (SS06XC). Each crewmember will perform procedures using hanging harness training methods and weapons system specific aircrew equipment. Training will include weapons specific aircrew flying equipment (e.g., flight gloves, flight helmet). This training will utilize a demonstration and performance method of instruction. Crewmembers on non-ejection aircraft will perform EPT once every 36 months. EPT with ACBRN equipment is now a one-time requirement during a crewmember's flying career. Once completed, it does not have to be accomplished again.

A2.2.5. Crew Resource Management. A training concept that emphasizes team effectiveness by enhancing individual and aircrew performance in communication, situational awareness, effective leadership and management, and crew coordination.

A2.2.5.1. All crewmembers will accomplish an initial CRM course, followed by biennial refresher training IAW AFMAN 11-290. Crewmembers who have completed initial CRM training in any aircraft MDS or while attending formal flying training will not re-accomplish initial training. Refresher courses are normally provided concurrent with simulator refresher training for pilots, navigators, and FEs, and locally for mission crew and AMTs.

A2.2.5.2. All instructors will complete instructor CRM training prior to assuming duties as an instructor. **(T-2)** Instructor CRM is a one-time requirement and is included in all instructor upgrade syllabi as a 2-hour block of instruction. Initial instructor candidates receive this training as part of the formal instructor upgrade course. Aircrew members who have previously completed a MAJCOM-approved Instructor Qualification Course will complete instructor CRM training prior to entering instructor upgrade training. **(T-2)** If contractor training is not available before or during the period of instructor upgrade, waivers can be requested IAW AFMAN 11-290 until the next available training date but NLT 1 year after upgrade. Aircrews taking the instructor CRM training will receive credit biennial refresher training.

A2.2.6. Cryptologic Mission Certification Training (CMCT). Initial cryptologic training completed at the line flying unit designed to certify ACLAs and ISR Operators in their language/mission management position for the unit mission. It also includes the CT required to maintain currency of cryptologic mission skills. Refer to 55 ECG CSP OI for more information.

A2.2.7. Cryptologic Skills Proficiency Test (CSPT). A proficiency test designed to measure cryptologic skills necessary to accomplish unit mission objectives. Testing and administration will be conducted in accordance with the ACCMAN 11-2EC-130HV1_55ECGSUP guidance.

A2.2.8. Defense Language Proficiency Test (DLPT). DoD standardized testing system for measuring an individual's proficiency in a foreign language. It consists of a battery of tests that

measures the general ability of a native or near-native speaker of English to comprehend a spoken and written foreign language and to speak the language. Refer to the 1A8X1 CFETP, DoDI 5160.71, *DoD Language Testing Program,* and DAFI 36-4005, *Total Force Language, Regional Expertise, and Culture Program* for more information.

A2.2.9. Flight Engineer Systems Refresher. FEs will complete an annual ground training course covering selected aircraft systems provided for in aircrew training system (ATS) contractor courseware. Training is designed to improve the flight engineer's technical knowledge of aircraft systems, operational procedures, and unit mission. The C-130 FE Initial Qualification graduation date establishes the first occurrence of this event being completed. Instructors and evaluators are exempt from this requirement.

A2.2.10. Flight Physical. All crewmembers will accomplish an annual flight physical IAW DAFMAN 48-123, *Medical Examination and Standards;* and AFI 48-170*, Periodic Health Assessment*. Flight physicals should normally be done in conjunction with the PHA.

A2.2.11. Initial Survival School. Accomplish IAW ETCA.

A2.2.12. Initial Water Survival. Accomplish IAW ETCA.

A2.2.13. Intelligence Training. All crewmembers will complete annual intelligence training. This training should be closely aligned with unit weapon/tactics programs and will include, as a minimum (items may be tracked collectively or separately in ARMS):

A2.2.13.1. Knowledge of Threats. Instruction should cover Integrated Air Defense Systems, surface-to-air threats (SAM/ADA), and air-to-air threats as detailed in AFTTP 3-1, *Threat Guide Chapters 1, 4, and 5*. Focus instruction on those items appropriate and applicable to execution of the unit mission.

A2.2.13.2. Visual Recognition of Rotary- and Fixed-Wing Aircraft, ground assets, and Naval Vessels. Crewmembers should identify type of aircraft they are likely to encounter – to include variants and paint schemes – from various aspects and determine whether the aircraft is a threat or non-threat. In addition, crewmembers will utilize major features to recognize ground targets and major categories of naval vessels.

A2.2.13.3. Evasion and Recovery. Evasion and recovery training prepares crewmembers for the possibility of evasion, captivity, and escape in hostile territory. This training may be completed in conjunction with high threat combat survival training.

A2.2.13.4. Collection and Reporting Systems. Training will enable crewmembers to initiate aircrew-originated reports and will familiarize them with the information requirements of the intelligence-generated mission report (MISREP) and intelligence report (INTREP). Intelligence oversight concerns should also be addressed.

A2.2.14. Isolated Personnel Report (ISOPREP) Review. All crewmembers will review their ISOPREP cards IAW Joint Publication (JP) 3-50, *Personnel Recovery* and Air Force Doctrine Publication (AFDP) 3-50*, Personnel Recovery*.

A2.2.15. Marshalling Exam. All flight crew must complete a marshalling exam IAW AFMAN 11-218. Initial exams must be accomplished prior to first flight. Exams must be accomplished prior to first flight, but NLT 30 days following PCS arrival to a flying unit. Marshalling exams conducting at the Basic C-130 FTU will count towards this event.

A2.2.16. Mission Planning Cell (MPC). Dual log with Initial VT. Credit an MPC event for planning an exercise/operational mission or CCMCS event. Planners will prepare and brief said mission IAW local planning and briefing guides. Planners will also debrief upon mission completion, paying particular attention to lessons learned, actual mission employment, threats, and any unforeseen circumstances. Planners will also consider the following items in preparation for the mission, and brief, as applicable, to the aircrew (this list is not all-inclusive):

A2.2.16.1. Deployment Planning Team (DPT) actions (Flight Crew) (for initial deployments)

A2.2.16.2. Aircraft structural and configuration limitations

A2.2.16.3. Any additional/non-standard Combat Search and Rescue Procedures

A2.2.16.4. ROE/SPINS

A2.2.16.5. Non-Standard Local Area Procedures

A2.2.16.6. Authentication Procedures

A2.2.17. Physiological Training. All crewmembers will accomplish academics and either an altitude chamber flight or a 55 ECG/CC approved syllabus utilizing the Reduced Oxygen Breathing Device/Hypoxia Familiarization Trainer IAW AFMAN 11-403, *Aerospace Physiological Training Program*. Both an initial course, and refresher training are required. Individuals are required to accomplish a refresher every 5 years.

A2.2.18. Significant Language Training Event (SLTE). At least 150 hours of immersion training or 6 consecutive weeks of 5-hour-a-day classroom training, or other significant event as defined by the Secretaries of the Military Departments and the Heads of Defense Agencies and DoD Field Activities. Refer to DoDI 5160.71 for more information.

A2.2.19. Simulator Refresher. Pilots, navigators, and FEs will complete a simulator refresher course. This will be accomplished in the 55 ECG WST according to the 55 ECG/CC approved Group Training Plan, or at another C-130 WST facility IAW the ATS contractor syllabus. This is an annual requirement, but crewmembers may go up to 17 months between refreshers when simulator slots are not readily available. Extensions must be granted by the SQ/DO or above and will be filed in the individual's training record. Completion of an AC upgrade or formal C-130 CTS TX/RQ course counts as annual simulator refresher training.

A2.2.20. Tactics Training. Refresher training will be provided in aircraft defensive systems, enemy systems and tactics, tactical approaches and departures, and other current information deemed essential by the group weapons and tactics office.

A2.2.21. Terminal Instrument Procedures (TERPS). FEs will receive annual training on Flight Information Publication (FLIP) and instrument procedures. This training is normally taught in conjunction with Flight Engineer Systems Refresher. Instructors and evaluators are exempt from this requirement.

A2.2.22. Verification Training. The objective of Verification Training is twofold. First, aircrew will understand unit OPLANs and DOC Statements. Second, given a realistic scenario, aircrew will complete deployment/employment planning. Verification Training should occur at least 3 times per year per Operations Squadron, resulting in a total of 6 times per year for the Group. This plan will be presented to a verification board, which will evaluate and certify

training completion. The verification board will be chaired by a SQ/CC or designated representative and will be composed of at least one instructor/evaluator of each crew position. The Group Weapons and Tactics Office is the OPR for Verification Training and will maintain detailed Standard Operating Procedures signed by the Gp/CC. The operation squadrons will administer Verification Training IAW the Standard Operating Procedures (SOPs) developed by Group Weapons and Tactics. This training requirement does not apply to FEs or AMTs.

A2.2.22.1. Initial Verification Training. Crewmembers will complete initial verification training after reporting to their respective operations squadron.

A2.2.22.2. Crew Position Upgrade – Upon upgrade to AC/MCC/MCS, crew members will re-accomplish Initial Verification Training in their new crew positions.

A2.2.23. Visual Threat Recognition and Avoidance Trainer (VTRAT). VTRAT is a training device designed to introduce or refresh scanners on their duties during an anti-aircraft threat engagement. The visual simulation displays realistic visual characteristics of anti- aircraft weaponry such as missile fly-out and ADA rate-of-fire, as seen from the scanner's viewpoint in the aircraft. Instruction in VTRAT is delivered in the context of flight over a simulated threat environment. The student views this environment on a high-resolution display system, from the perspective of his/her assigned scanner position. The student hears the instructional text through a headset and interacts with the trainer via a voice recognition system, as well as the communication and flares countermeasures controls available on the real-world aircraft. VTRAT diagnoses weak areas of student performance and emphasizes training in these areas until mastery of the specific threat protocol is achieved.

A2.2.23.1. VTRAT Initial Training. This is initial training for crewmembers. Training will consist of the basics of ADA and MANPAD recognition and avoidance. The course will consist of one hour of academics followed by approximately 30 minutes of individual simulator time on the VTRAT.

A2.2.23.2. VTRAT Refresher Training. This is CT for mission ready crewmembers. This course will refresh crewmembers on basics of ADA and MANPAD recognition and avoidance. Course involves approximately 30 minutes of individual simulator time on the VTRAT. Refresher training can also be completed in an approved EC-130H or C-130H WST.

A2.2.23.3. VTRAT Instructors. VTRAT Instructors may be selected from experienced crew members to instruct and conduct training on the VTRAT simulator. To be certified, they must conduct a briefing and simulator training under direct supervision from an already certified and 755 OSS approved representative. Once certified and after conducting at least one VTRAT training session independently, they are authorized to certify other experienced crew members.

Attachment 3

TRAINING POLICY

A3.1. Training Aircraft Not Capable of Flight. If an aircraft is not capable of departure within 4 hours after scheduled departure time, the training sortie may launch under the following conditions:

A3.1.1. An Operational Risk Management (ORM) analysis will be re-accomplished to consider crew duty day, fatigue, alterations to training objectives and/or profile, aircraft maintenance status, and any other items affecting the mission.

A3.1.2. SQ/CC, Operations Officer, or designated representative grants approval.

A3.1.3. For planning purposes, a minimum of 1.5 hours should be allotted for aircraft preflight duties when determining the anticipated departure time.

A3.2. Training/Evaluation Briefings. Before all training/evaluation missions, ACs or instructors/flight examiners will brief their crews on the following additional items:

A3.2.1. Training/Evaluation requirements. Instructors/evaluators (for each crew position) will outline requirements and objectives for each student or examinee.

A3.2.2. Planned training profiles and seat changes.

A3.3. Debriefing. Review and evaluate overall training performed. Each student or crewmember should understand thoroughly what training has been accomplished. Ensure all training is documented.

A3.4. Touch-and-Go Landings:

A3.4.1. Ground-idle touch-and-go landings may only be flown if required as part of a formal syllabus or with group commander approval. Do not perform ground-idle no-flap touch-and-go landings.

A3.4.2. Touch-and-go landings are authorized under the following conditions:

A3.4.2.1. Minimum runway length for 50 percent flap flight idle touch-and-go landings is 5,000 feet. Minimum runway length for all other touch-and-go landings is 6,000 feet.

A3.4.2.2. Crosswind component must be within the recommended zone of the landing crosswind chart. Touch-and-go landings are not authorized when corrections to minimum touchdown speed have been made to enter the recommended zone of the crosswind component chart.

A3.4.2.3. Minimum ceiling of 1,000 feet and minimum visibility of 2 miles (300 feet and 3/4 mile (Runway Visual Range [RVR] 40) for IPs).

A3.4.2.4. Authorized when normal wake turbulence criteria (IAW AFMAN 11-202V3) are met.

A3.4.2.5. Comply with all flight manual restrictions and procedures to include performance degradation with fuel, cargo limits, etc.

A3.4.3. Passenger restrictions are IAW ACCMAN 11-2EC-130HV3.

A3.4.4. AC must be touch-and-go certified but may occupy either seat.

A3.5. Stop-and-Go Landings:

A3.5.1. Stop-and-go landings are authorized only on designated training, evaluation, or currency missions and may be performed by any qualified EC-130H pilot.

A3.5.2. When stop-and-go landings are performed, the runway remaining for takeoff must be equal to or greater than Critical Field Length (CFL) (balanced or unbalanced, whichever is greater). Crosswind component must be in the recommended zone of the landing crosswind chart. Ceiling and visibility must be at least 300 feet and 3/4 mile (RVR 4000).

A3.5.3. Do not perform stop-and-go landings in conjunction with no-flap landings, when normal wake turbulence criterion is not met, or when intercepting/crossing the flight path of a heavy jet while performing an approach or landing.

A3.6. Simulator-Only Maneuvers. Do not perform the following maneuvers or procedures in flight:

A3.6.1. Full stalls

A3.6.2. Rudder force reversals or fin stalls

A3.6.3. Spins

A3.6.4. Simulated runaway trim malfunctions.

A3.6.5. Simulated hydraulic system loss by turning engine-driven hydraulic pumps off

A3.6.6. Simulated two-engine out approach or landing.

A3.6.7. Simulated engine-out takeoffs

A3.7. Simulated Instrument Flight. Do not use a hood or other artificial vision-restricting device for any phase of flight. Simulated instrument flight may be flown and logged without the use of such devices.

A3.8. Windmill Taxi Start. Direct IP supervision is required, and aircraft technical order recommendations are mandatory. Authorized during daylight, with a dry, hard-surfaced runway at least 147 feet wide, and the crosswind component within the recommended zone of the takeoff crosswind chart. May only be performed if required as part of a formal syllabus or with group commander approval.

A3.9. Practice Aborted Normal Takeoff. Direct IP supervision is required. Authorized during daylight with the crosswind component within the recommended zone of the takeoff crosswind chart. Runway must be dry, hard-surfaced, and long enough to allow refusal speed to be greater than or equal to takeoff speed. Initiate aborts by stating "REJECT" prior to reaching the lesser of takeoff or refusal speed. Do not practice aborts from touch-and-go or stop-and-go landings. Pre-brief all actual engine shutdowns due to simulated malfunctions. May only be flown if required as part of a formal syllabus or with group commander approval.

A3.10. Actual Engine Shutdown and Airstart. Direct IP supervision is required; 55 ECG/CC approval is required. Engines may be shut down during daylight, in Visual Meteorological Conditions (VMC), and at altitudes no lower than 2,500 feet AGL.

A3.11. Flight Maneuvers. The following maneuvers may only be flown on training sorties. The pilot will alert the crew before accomplishing these maneuvers.

A3.11.1. Approaches to Stall. Direct IP supervision is required. Authorized during daylight, in VMC, at a minimum of 5,000 feet AGL or 5,000 feet above a cloud deck. Initiate recovery initial stall buffet. May only be flown if required as part of a formal syllabus or with group commander approval.

A3.11.2. Instrument Steep Turns. Authorized during daylight, in VMC, with up to 60 degrees of bank. Bank angles in excess of 45 degrees are restricted to altitudes above 5,000 feet AGL (or 5000 feet above the cloud deck), and check stall speeds prior to initiating steep turns.

A3.11.3. Slow Flight. Direct IP supervision required. Authorized at or above 5,000 feet AGL. Fly at approach, threshold, and 1.2 power off stall speed with gear down and flaps 0%, 50%, or 100%. Do not exceed 15-degrees of bank. May only be flown if required as part of a formal syllabus or with group commander approval.

A3.12. Go-Around and Missed Approach. Initiate a planned go-around/missed approach no lower than:

A3.12.1. Precision approach – DH/DA (or 200-feet HAT, whichever is higher).

A3.12.2. Non-precision approach – Minimum descent altitude depicted on approach plate.

A3.12.3. Visual Approach – 200-feet AGL for simulated emergencies (no minimum for non-emergency).

A3.12.4. VFR pattern or circling/sidestep approach (after circling maneuver has begun) – 200 feet AGL for simulated emergencies (no minimum for non-emergency).

A3.12.5. Restricted Low Approach (aircraft, equipment, or personnel are on the runway) – 500 feet AGL.

A3.13. Simulated Emergency Flight Procedures:

A3.13.1. An instructor or evaluator pilot must occupy one of the pilot seats when practicing emergencies that require simulated engine shutdown, or reconfiguration of switches to abnormal positions/configurations. These procedures are only authorized during training, evaluation, or currency flights. IP candidates who occupy a pilot seat and are under the supervision of an evaluator pilot not occupying a pilot seat may practice simulated emergency procedures during initial or requalification upgrade evaluations to IP. Do not conduct aircraft systems emergency procedures training during tactical training. Preface all simulated emergencies with the word "simulated" and terminate simulated emergencies when an actual emergency arises.

A3.13.2. A safety observer is required for any airborne training where doors are opened in flight. Intentions must be briefed to crewmembers and the squadron Operations Supervisor before flight.

A3.13.3. Passenger restrictions are IAW ACCMAN 11-2EC-130HV3.

A3.13.4. Conduct simulated emergency flight procedures IAW this directive. Use a realistic approach. Limit simulated emergencies to non-critical phases of flight when possible. Notify

the controlling agency of nonstandard traffic patterns or patterns that may require special sequencing.

A3.14. Simulated Engine Failure. Direct IP supervision is required. One throttle may be retarded to FLIGHT IDLE at not less than one-engine inoperative VMCA (out of ground effect) nor lower than 300 feet AGL.

A3.14.1. Restrictions:

A3.14.1.1. Authorized in day Instrument Meteorological Conditions (IMC) with ceilings and visibility at or above circling minimums.

A3.14.1.2. Authorized at night with weather at or above 1,000-foot ceiling and 2 Statute Miles (SM) visibility or circling minimums whichever is higher.

A3.14.1.3. Crosswind component must be in the recommended zone of the landing crosswind chart for simulated engine-out landing.

A3.14.1.4. Engine-out no-flap landings are restricted to AC Upgrades and above. Do not conduct planned go-arounds/missed approaches from engine-out no-flap landings. Required go-arounds from engine-out no-flap approaches require setting the flaps to 50% and using all four engines.

A3.14.1.5. For IPs, do not compound engine-out circling approaches with other simulated malfunctions.

A3.14.1.6. Simulated engine failure is prohibited during air refueling operations.

A3.15. Practice No-Flap Approach and Landing. Direct IP supervision is required.

A3.15.1. Restrictions:

A3.15.1.1. Maximum gross weight is 120,000 pounds.

A3.15.1.2. Authorized in day IMC with ceilings and visibility at or above circling minimums.

A3.15.1.3. Authorized at night with weather at or above 1,000-foot ceiling and 2SM visibility or circling minimums whichever is higher.

A3.15.2. No-flap circling approaches/landings and engine-out no-flap approaches/landings are authorized for AC Candidates and above. IPs will not combine other simulated emergencies with no-flap circling approaches.

A3.15.3. Use 50% flaps for a go-around from a no-flap approach. Do not conduct planned go-arounds/missed approaches from engine-out no-flap landings. Required go-arounds from engine-out no-flap approaches require setting the flaps to 50% and using all four engines.

A3.16. Air-to-Air Refueling Training. Air refueling is a qualification that requires in-flight evaluation prior to performing contacts unsupervised.

A3.16.1. Pilots, navigators and FEs receiving AAR training must be under direct supervision of an AAR-certified instructor in their crew position.

A3.16.2. Non-AC-qualified pilots normally fly in the pre-contact position unless under direct supervision of an IP. Non-AC-qualified pilots may perform contacts in either seat with an AAR-certified IP in the other seat.

A3.16.3. Pilots qualified in the contact position may perform contacts from either seat. Limits demonstration will only be flown under direct IP supervisions and only after a tanker disconnect capability is demonstrated.

A3.16.4. Any pilot in the contact position may take fuel.

A3.17. Local Training Frequencies. ACC has authorized the 755 OSS, and subsequently the 55 ECG, the use of 15 frequencies for home station training and coordination. The following frequencies can be used at the Needles orbit, AX SOUTH orbit, Cochise orbit, Deming orbit and Bowie orbit: 148.6, 148.2375, 148.4125, 148.6375, 242.55, 244.55, 245.55, 251.55, 254.55, 264.55, 266.55, 271.55, 274.55, 282.55 and 298.55. These frequencies are to be used for communication between aircraft or internally to the aircraft for training purposes to enable more realistic training scenarios. The approval to use the frequencies will expire on 16 April 2025. Any subsequent updated ACC- authorized frequencies take precedence over this list. Proper planning and de-confliction of use of these frequencies is the responsibility of the aircrew utilizing them. Report non-ECG traffic on these frequencies to 755th Operations Support Squadron Weapons and Tactics (755 OSS/OSK). Direct any questions to the 755 OSS/OSK office at 228-9610.

Table A3.1. Training Restriction Summary.

Event	Restrictions	Notes
Touch-and-Go Landings	Authorized only on designated training, evaluation, or currency missions. Requires 100 hours of primary or secondary flying time or approved WST following AC certification. ACs restricted to flight idle touch and go landings. Certified AC must be in seat. Ground and flight idle touch and go performed by any pilot from any seat when a flight evaluator, IP, or IP candidate during upgrade/evaluation occupies a pilot's seat. Ground idle touch and go only authorized if required as part of a formal syllabus or with group commander approval. No-flap ground-idle touch and go landings not authorized. Minimum runway length: flaps 50 percent, 5,000 feet - for all other, 6,000 feet. Crosswind component corrected for RCR is within recommended zone. Minimum ceiling of 1,000 ft and minimum visibility of 2SM (300 ft and RVR 4000 (3/4 SM visibility) if an IP is in either seat)	
Stop-and–Go Landings	Authorized only on designated training, evaluation, or currency missions Authorized to be performed by any C-130 qualified pilot. Runway remaining for takeoff must be equal to or greater than CFL (balanced or unbalanced, whichever is greater). Crosswind component corrected for RCR in the recommended zone of the landing crosswind chart. Ceiling and visibility must be at least 300-feet and 3/4 mile (RVR 40). No-flap stop and go landings are not authorized.	

Simulated Engine Failure	Prohibited during AAR operations. Retard one throttle to flight idle at not less than VMCA (one-engine inoperative, out of ground effect) nor less than 300 feet AGL. Authorized day IMC if Weather (WX) at or above circling minimums; authorized night IMC with weather at or above 1,000-foot ceiling and 2SM visibility or circling minimums whichever is higher. Crosswind component must be in the recommended zone for landing. Engine-out no-flap landings restricted to AC Upgrades and above; planned go-arounds out of a no-flap engine-out approach are not authorized. Do not compound engine-out circling approaches with any other simulated malfunctions.	1
No-Flap Landing	Engine-out no-flap landings restricted to AC Upgrades and above; planned go-arounds out of a no-flap engine-out approach are not authorized. No-flap circling approaches are restricted to AC Upgrades and above. Do not combine with any other simulated emergencies. Max gross weight is 120,000 lbs. and crosswind component must be within the recommended range. Authorized day IMC if WX is at or above circling minimums; authorized night IMC with weather at or above 1,000-foot ceiling and 2SM visibility or circling minimums whichever is higher. Crosswind component must be within the recommended zone for no-flap landings. No-flap stop-and-go or ground-idle touch-and-go landings are not authorized.	1
Go-around, Missed Approaches	Minimum altitude is 500-feet AGL when aircraft, equipment, or personnel are on the runway. VFR/Visual/Circle - No lower than 200-feet AGL when practicing simulated emergencies. Practice instrument approaches - no lower than minimum altitude for the approach.	
Air-to-Air Refueling	All pilots may perform contacts under direct supervision of an AAR-certified IP. AAR-Qualified pilots may perform contacts from either seat. AAR certified IPs may perform boom limit demonstrations. Pilots may perform boom limit demonstrations under direct IP supervision and only after a tanker disconnect capability is demonstrated.	
Windmill Taxi Start	Day only on dry hard-surfaced runway at least 147 feet wide. Crosswind component in the recommended zone of the landing crosswind chart. Dash one recommendations are mandatory.	1, 2

Slow Flight Demonstration	At or above 5,000 feet AGL. Fly at approach, threshold, and 1.2 times stall speed with gear down and flaps 0, 50, or 100 percent. Do not exceed 15-degrees of bank.	1, 2
Approaches to Stall	Requires day VMC at a minimum of 5,000 feet AGL or above cloud deck.	1, 2
Steep Turns	Authorized during day VMC with up to 60-degrees bank. Restricted to at or above 5,000 feet AGL or above cloud deck for bank angles in excess of 45°. Review stall speeds before performing turns.	
Aborted Normal Takeoff	Day only on dry hard-surfaced runway with crosswind component in the recommended zone of the landing crosswind chart. Runway must be sufficient to allow takeoff and refusal speeds to be equal. Not authorized from touch and go or stop and go landings. Pre-brief all actual engine shutdowns for simulated malfunctions.	1, 2
Actual Engine Shutdown and Airstart	Day VMC no lower than 2,500 feet AGL.	1, 3
Notes: 1. Direct IP supervision required. 2. May only be flown if required as part of a formal syllabus or with 55 ECG/CC approval. 3. 55 ECG/CC approval is required.

DD MMM YY

MEMORANDUM FOR HQ ACC/A3C

FROM: xx ECS/CC
6120 Rivet Fire Rd., Bldg 253
Davis-Monthan AFB, VA 85707

SUBJECT: (41/42/43) ECS Training Shortfalls

1. TRAINING SHORTFALLS (Training events/sorties not accomplished or locally waived. Only report those shortfalls that the unit commander feels will have a major impact on training. Generally report only those events/sorties that affect 15% or greater crew force.)

EVENT/SORTIE

a. PERCENT OF CMR/BMC CREWS (by crew position) AFFECTED

b. SPECIFIC REASONS FOR SHORTFALL

c. CORRECTIVE ACTION (if any)

d. LIMFACs

2. COMMANDER'S COMMENTS (Comments to improve the training and reporting system.)

3. If there are any questions, please contact XX (provide a Squadron POC for training shortfall information, including name, rank, office symbol, and DSN).

MEMORANDUM FOR HQ ACC/A3C

FROM: 55 ECG/CC
5340 Herky Blvd, Bldg 220
Davis-Monthan AFB, AZ 85707-4524

SUBJECT: (state the specific type of waiver) Waiver Request

1. Request a waiver to (state the purpose of the waiver request, the specific AFMAN/AFI, syllabus, prerequisite, required upgrade, etc. to be waived.) The following information is provided per AFMAN 11-2EC-130H, Vol 1, Attachment 6:

a. *Student's name (Last Name, First Name, MI, and rank

b. *Specific nature of waiver, to include prerequisite, syllabus, course, etc., as required.

c. *Reason and justification for waiver. If asking for a prerequisite waiver, include reasons prerequisite wasn't accomplished and gameplan for accomplishing the prerequisite.

d. *Training Class and start date.

e. **Present crew qualification including special qualifications.

f. **Total flying time and primary aircraft authorization (PAA) time (including instructor or evaluator time if applicable).

g. **Crew qualification to which person is qualifying or upgrading, and next available opportunity to accomplish training.

h. **Previous attendance at any formal instructor course (including course identifier and graduation date). (Required for in-unit instructor upgrade waivers only.)

i. **Impact if not approved and mandatory upgrade or qualification date, if applicable.

j. *Additional remarks, to include formal school courseware required.

SAMPLE RAP PROBATION LETTER

Figure A6.1. Memorandum For Record Sample RAP Probation Letter.

DEPARTMENT OF THE AIR FORCE
HEADQUARTERS, 55TH WING (ACC)
OFFUTT AIR FORCE BASE NEBRASKA

DD MMM YY

MEMORANDUM FOR RECORD

FROM: 41 ECS/CC

SUBJECT: Probation for Failing RAP Sortie 1 and 3-Month Lookback for EOM MMM YY

1. RAP sortie requirements can be found in AFMAN 11-2EC-130H, Vol 1, Table 4.5. The following individuals have failed their 1 and 3-Month Lookback and are on probation for 1 month.

ASSIGNED	ATTACHED
Rank/First, Last	

2. Scheduling and Training Offices will ensure the above individuals meet their 1-Month Lookback requirements by the end of the probation period. If the lookback is not satisfied, the individual will be regressed to N-CMR / N-BMC and msut complete the SQ/CC re-certification program as defined in the Training Office Operating Instructions.

3. A copy of this letter will be placed in Section 2 of the individual's Continuation Training Folder. Please direct all questions to the 41 ECS Training Office, DSN 228-xxxx.

DEPARTMENT OF THE AIR FORCE
HEADQUARTERS, 55TH WING (ACC)
OFFUTT AIR FORCE BASE NEBRASKA

DD MMM YY

MEMORANDUM FOR RECORD

FROM: 41 ECS/CC

SUBJECT: Regression to N-CMR / N-BMC for Unaccomplished CMR Ground Training Items

1. AFMAN 11-2EC-130HV1, Table 4.1 *Continuation Ground Training* lists all required ground training to maintain CMR / BMC status.

2. IAW AFMAN 11-2EC-130H, Vol 1, para 4.2.1., the following individuals have been regressed to N-CMR / N-BMC until all CMR ground training items have been accomplished.

A Flt	B Flt	C Flt
Rank/First, Last (list ground training items here)		

3. The above individuals were identified from the *CMR Ground Training Events* tables produced by ARMS. These tables will be passed to the A/B/C Flight Commanders and 41 ECS Training Office. Flight Commanders will notify and track their individuals to ensure all CMR events are accomplished as soon as possible. 41 ECS Training Office will use the ARMS tables to prioritize the scheduling of ground training events.

4. POC for this memorandum is 41 ECS Training Office, DSN 228-xxxx.
