Supersedes: AMCI10-402, 17 November 2011
Pages: 73

This instruction establishes policies and procedures for the Civil Reserve Air Fleet (CRAF). The CRAF program is a national plan, based on the Defense Production Act of 1950 and Executive Order 12656, to utilize airlift resources of US air carriers to support Department of Defense (DOD) airlift requirements in a national security situation. This instruction implements AFPD 10-4, *Operations Planning: Force Presentation/Force Generation and Global Force Managemen*t, to establish procedures for peacetime planning for the activation of the CRAF. It provides guidance for Air Force organizations involved in DOD civil augmentation airlift and for civil air carriers participating in the CRAF. Along with the International and Domestic CRAF Airlift Services contract, Public Law 85-804 and Executive Order 10789, as amended, these documents constitute the Air Mobility Command (AMC) guidance for the use of CRAF resources. This publication applies to the Air National Guard (ANG) and Military Reserves. **Note:** The reporting requirements within this instruction are exempt from RCS controls per AFI 33-324. Ensure all records generated as a result of processes prescribed in this publication adhere to AFI 33-322, *Records Management and Information Governance Program*, and are disposed in accordance with the Air Force Records Disposition Schedule, which is located in the Air Force Records Information Management System. Refer recommended changes and questions about this publication to the OPR using the DAF Form 847, *Recommendation for Change of Publication*. Forward recommendations for revisions to this instruction to the DOD Commercial Airlift Division, CRAF Branch at: HQ AMC/A3BC, 510 POW-MIA Drive, Room 316, Scott AFB IL 62225-5011, DSN 779-1751. This publication may be supplemented at any level, but all supplements must be routed to the OPR of this publication for coordination prior to certification and approval. Changes or supplements to this instruction by agencies, other than AMC, are prohibited. This does not preclude its use as a reference document for preparation of intra- agency instructional directives.

Chapter 1—CRAF GENERAL **8**

Section 1A—Guidance 8

1.1. Commercial Air Carrier Programs. 8

1.2. Basic Guidance. 8

1.3. Roles and Responsibilities. 8

Section 1B—Organization 13

1.4. AMC/CC: 13

1.5. HQ AMC/A3/10/. 14

1.6. USTRANSCOM/AQ (or TCAQ). 14

1.7. HQ AMC/A3B (or A3B). 14

Chapter 1

CRAF GENERAL

Section 1A—Guidance

1.1. Commercial Air Carrier Programs. AMC headquarters directorates are involved to some degree in numerous commercial air carrier-related contracts and agreements constituting Commercial Air Carrier Programs. These include the International Charter Airlift Services Contract (commonly known as the CRAF Contract), Domestic Charter Airlift Services Contract, General Services Administration (GSA) City Pair Program (CPP) Contract, Air Tenders Program, Global Heavyweight Service Contract, Next Generation Delivery Services Contract, and Blanket Purchase Agreements, etc.

1.2. Basic Guidance. Basic guidelines for the CRAF program are directed toward identification, organization, and development of readily available civil aircraft that can augment the airlift capability of the DOD. The CRAF may be activated/deactivated incrementally or in total, by stage, segment, section, and elements and the government retains the option of activating any portion of, as required. During CRAF activation, USTRANSCOM Acquisition Directorate exercises contract oversight and the carrier retains operational control. Utilizing the Air Mobility Command (AMC) Mission Assurance Working Group- Air (MAWG-A), HQ AMC/A3/10 is the approval authority for all risk assessments, including limitations on commercial operations controlled by the 618 Air Operations Center (618 AOC). HQ AMC/A3/10 will serve as the waiver approval authority for all 618 AOC scheduled commercial missions which deviate from established force protection policy. Carriers will not operate in areas with a final assessed risk greater than 'Low' as determined by the MAWG-A Policy Matrix. Furthermore, carriers will adhere to all Notices to Airmen (NOTAMs), Special Federal Aviation Regulations (SFARs) and FAA issued requirements. Lastly, when activated, CRAF carriers retain civil status and 'First Right of Refusal. References to HQ AMC/A3BC imply the HQ AMC, DOD Commercial Airlift Division, CRAF Branch.

1.3. Roles and Responsibilities. The following directorates will be responsible for the following:

1.3.1. **Directorate of Intelligence, Surveillance and Reconnaissance (AMC/A2) will:**

1.3.1.1. Support intelligence requirements of CRAF and commercial air charter companies in accordance with AFMAN 14-402, *Intelligence Mission Roles, Responsibilities, and Program Management*.

1.3.1.2. Acquiring and tasking the necessary equipment, facilities, and people to provide intelligence to CRAF companies and aircrews during CRAF activation for contingencies or wartime operations.

1.3.1.3. Developing and implementing, in conjunction with the AMC MAWG-A, processes and procedures for providing CRAF and contract charter carriers with periodic intelligence updates and/or products as follows:

1.3.1.3.1. Current review of adversary capabilities, intentions, and perceptions that may affect commercial operations, as required based on the operational environment or by request from either AMC/A3B or the MAWG-A.

1.3.1.3.2. National Intelligence Community assessments on the threat to commercial aviation when published and when classification permits dissemination to commercial carriers.

1.3.1.3.3. Intelligence assessments on airfields, countries, and regions located on the MAWG-A Watch List, as requested by the MAWG-A.

1.3.1.3.4. Summary of significant events, intelligence reporting and/or threat streams for airfields located in MAWG-A Watch List countries approved for commercial operations monthly or as needed based on dynamic operating environments or requested from either AMC/A3B or the MAWG-A.

1.3.1.4. Maintain lines of communication with USTRANSCOM's Intelligence Directorate, the 618 AOC/IRD, the Intelligence Community, and the FAA's 24/7 Intelligence Watch Center to provide cross talk and event notification as required.

1.3.1.5. Incorporate commercial air operations appropriately into applicable publications (instructions, manuals, doctrine, plans, etc.) under AMC/A2 purview.

1.3.2. Directorate of Operations (HQ AMC/A3/10) will:

1.3.2.1. Develop, maintain, and revise command instructions affecting DOD's processes for management and integration of civil airlift operations.

1.3.2.2. Incorporate commercial air operations appropriately into applicable publications (instructions, manuals, doctrine, plans, etc.) under HQ AMC/A3/10 purview.

1.3.2.3. Execute the requirements of the Quality and Safety Oversight of the Commercial Air Carrier Program.

1.3.2.3.1. Ensure compliance with the charter transportation requirements prescribed by 10 United States Code (USC), Chapter 157, Section 2640, Charter Air Transportation of Members of the Armed Services (Public Law 99-661), 32 Code of Federal Regulations (CFR) 861, Department of Defense Commercial Air Transportation Quality and Safety Review Program, and Department of Defense Instruction (DODI) 4500.53, DOD Commercial Air Transportation Quality and Safety Review Program.

1.3.2.3.2. Conduct preliminary reviews of new entrants for potential Commercial Airlift Review Board (CARB) approval.

1.3.2.4. Designate liaisons to organizations representing the aviation industry, as appropriate.

1.3.2.5. Serve as the primary Point of Contact (POC) to interface with the FAA Flight Standards Division, the National Transportation Safety Board (NTSB), industry trade organizations (A4A, National Advisory Committee for Aeronautics (NACA), International Air Transport Association (IATA), Regional Airline Association (RAA), etc.), and other government agencies on aviation safety and regulatory matters.

1.3.2.5.1. Facilitate the open exchange of pertinent inspection and safety information with the FAA Flight Standards Division and NTSB as required by applicable memorandums of understanding (MOU).

1.3.2.5.2. Provide necessary interface with FAA and NTSB officials for information relevant to any fatal or serious commercial carrier accident that will necessitate CARB review/decision in accordance with requirements defined in applicable MOUs.

1.3.2.6. Directly interface with commercial air carriers at the appropriate level on applicable commercial air programs and operational issues.

1.3.2.7. Execute and manage CRAF operations as the CRAF Functional Management Office to support National Security Decision Directive (NSDD) 280 in accordance with AMCI 10-402 and the applicable Charter Airlift Services Contract. Specific responsibilities include but are not limited to:

1.3.2.7.1. Managing the readiness posture of the commercial air industry to respond to crisis.

1.3.2.7.2. Training, equipping, and evaluating commercial air carrier operations to ensure their readiness to operate in the event of CRAF activation.

1.3.2.7.3. Conducting Mobility Representative (MOBREP) training at least once each calendar year for appropriate personnel from the CRAF carriers.

1.3.2.7.4. Developing and managing CRAF activation and deactivation processes.

1.3.2.7.5. Managing communications secure communications equipment provided to the CRAF carriers, to include required training, inventorying, and technical support as required.

1.3.2.7.6. Ensuring incorporation of commercial air operations appropriately into applicable doctrine, planning, etc., documents under HQ AMC/A3/10 purview.

1.3.2.7.7. Managing CRAF aircrew counter-chemical, biological, radiological, and nuclear warfare defense support in accordance with the requirements and procedures in AMC Pamphlet 10-260, CRAF CB Warfare Defense Procedures.

1.3.2.7.8. Coordinating and overseeing the use of military installations by CRAF carriers.

1.3.2.7.9. Managing the process to determine Mobilization Value points, to include but not limited to processing data provided by CRAF carriers, allocating aircraft to appropriate fleet segments/sections/elements/stages, and maintaining supporting documentation.

1.3.2.7.10. Determining suitability, based on technical capability, of carriers and aircraft for CRAF membership and providing Letters of Technical Ineligibility for those carriers deemed to not meet contract technical requirements.

1.3.2.7.11. Managing the CRAF flight information publications (FLIP) program by working closely with the National Geospatial-Intelligence Agency (NGA) and the Defense Logistics Agency (DLA) to ensure that each CRAF carrier is provided with aeronautical flight information publications necessary to accomplish DOD airlift missions during activation and non-activation periods.

1.3.2.7.12. Facilitating commercial contract operator access to other planning tools for mission execution to include but not limited to: Notice to Airmen (NOTAMs), Giant Report, and the DOD Foreign Clearance Guide (FCG).

1.3.2.7.13. Supporting the CRAF Executive Working Group (EWG) process, as required.

1.3.2.7.14. Managing, preparing, and distributing the AMC Form 312, CRAF Capability Summary, and the Department of Transportation (DOT) CRAF Allocation Letter, as needed.

1.3.2.8. Determine, in coordination with AMC/A2 and AMC/A3, when operational requirements warrant seeking SFAR exemptions to facilitate contracted commercial operations.

1.3.2.9. Facilitate periodic commercial air synchronization meetings with the USTRANSCOM (J3, J5/J4, AQ, JA, LL) and AMC staff (A3B, A35, A4, 618 AOC).

1.3.2.10. Provide program management and functional management of the Air Carrier Analysis Support (ACAS) System, an information technology system critical to DOD's compliance with 10 USC 2640

1.3.2.11. Provide Airfield Detail information from the Global Decision Support System (GDSS) database (Giant Report) upon request to a US commercial air carrier conducting a DOD-contracted mission. Foreign air carriers sub-contracted to and conducting a DOD mission for a US commercial air carrier must have requests for GDSS airfield information (Giant Report) approved through the AMC Foreign Disclosure office. Airfield detail information from the GDSS database (Giant Report) may only be provided to an air carrier listed on the DOD Approved Air Carrier Listing (accessible via milBook).

1.3.3. Directorate of Logistics (AMC/A4) will:

1.3.3.1. Provide cargo (including hazardous materials (HAZMAT), passenger, and pet transportation policy as it relates to contracted commercial air operations.

1.3.3.2. Facilitate and manage customer comments resulting from commercial air operations.

1.3.3.3. Provide policy and management of AMC-controlled aerial ports to promote efficiency of commercial air operations.

1.3.3.4. Monitor CRAF CBRN asset management, utilizing appropriate automated databases, to ensure that CRAF asset levels are managed in like fashion to AMC operational units to achieve the highest possible fill rate given current budget and asset lifecycle/manufacture availability. HQ AMC/A4RE will provide a CRAF inventory report to AMC/A3B when changes occur or when requested.

1.3.3.5. Manage and administer the Ramp Inspection Program in accordance with DAFI 21-101_AMC SUP.

1.3.3.6. Incorporate commercial air operations appropriately into applicable publications (instructions, manuals, doctrine, plans, etc.) under AMC/A4 purview.

1.3.3.7. Provide briefing support to the annual CRAF MOBREP training, as required.

1.3.3.8. HQ AMC/A4RE: Acting as command manager for mobility bag assets (CBRN: chemical warfare ensemble assets) provide direction to 436 LRS, Dover AFB to ensure that CRAF chemical warfare ensemble assets are adequately managed IAW AMC stockage policy. Annually AMC/A4RE will notify AMC/A3BC of significant changes in CRAF chemical warfare ensemble stockage levels, which may affect support of the activation of CRAF aircrews.

1.3.3.9. Provide policy guidance and technical assistance to COR personnel at AMC passenger terminals, AMC commercial gateways, and Navy-operated AMC terminals in accordance with established procedures.

1.3.3.10. Serve as the Command focal point for GSA CPP, to include:

1.3.3.10.1. Coordinating commercial travel issues and DOD traveler trends and analysis with Defense Travel Management Office (DTMO).

1.3.3.10.2. Supporting GSA CPP special source selection evaluation boards.

1.3.3.10.3. Supporting quality of life programs for military service members such as Holiday Exodus.

1.3.4. Directorate of Strategic Plans, Requirements and Programs (AMC/A5/8) will:

1.3.4.1. Incorporate commercial air operations appropriately into applicable publications (instructions, manuals, doctrine, plans, etc.) under A5/8 purview.

1.3.5. Directorate of Communications (AMC/A6) will:

1.3.5.1. Provide briefing support to the recurring CRAF EWG meetings and annual MOBREP training, as required.

1.3.6. Directorate of Analyses, Assessments and Lessons Learned (AMC/A9) will:

1.3.6.1. Provide analysis to support commercial air programs upon formal request from AMC/A3.

1.3.7. AMC Financial Management and Comptroller (AMC/FM) will:

1.3.7.1. Ensure fiscal architecture to support commercial air carrier operations.

1.3.7.2. Request budget and program objective memorandum (POM) data for Commercial Augmentation Fixed Buy and Assured Business minimums for cargo, passenger, and other validated air transportation requirements based on projections from HQ AMC/A3/10 and commercial airlift gateways from AMC/A4.

1.3.8. AMC Staff Judge Advocate (AMC/JA) will:

1.3.8.1. Provide legal guidance and review for the decisions affecting the status of commercial air carriers in the DOD transportation system.

1.3.8.2. Provide legal support for AMC CARB issues and policy as required by DODI 4500.53.

1.3.8.3. Provide legal support for all phases of airlift and CRAF policy development at AMC.

1.3.8.4. Provide briefing support to the annual CRAF MOBREP training, as required.

1.3.9. **618 AOC will:**

1.3.9.1. Manage, support, and oversee commercial daily operations in the DOD airlift system, as arranged and awarded by TCAQ.

1.3.9.2. Provide planning factors to commercial contract operators for mission execution. Planning factors will include airfield and AMC air terminal hours of operation, Maximum on the Ground (MOG) and airfield restrictions.

1.3.9.3. Schedule commercial contract missions. The appropriate 618 AOC scheduling office and the contract carrier will agree on specific times and dates. The 618 AOC will publish these missions in GDSS.

1.3.9.4. Provide mission tracking for commercial contract missions.

1.3.9.5. Forward real time threat warnings provided by AMC/A2 and the 618 AOC Senior Intelligence Duty Officer (SIDO) to affected commercial contract operators with missions in execution.

1.3.9.6. Provide 24/7 guidance for cargo/passenger operations to AMC aerial ports worldwide for commercial contract channel missions in execution.

1.3.9.7. Provide assistance with acquiring diplomatic clearances when appropriate.

1.3.9.8. Provide cargo/passenger movement analyses for 618 AOC scheduled commercial contract missions.

1.3.9.9. Support the Aviation Disaster Family Assistance Act by providing a complete and accurate passenger manifest to the CRAF carrier after an accident covered by the Act.

1.3.9.10. Provide AMC-approved requirements for contract airlift to USTC IAW USTCI 4500.10, Enclosure A, Section 7, paragraphs g and h.

1.3.9.11. Provide data and briefing support to the annual CRAF MOBREP training, as required.

1.3.9.12. Incorporate commercial air operations appropriately into applicable publications (instructions, manuals, doctrine, plans, etc.) under 618 AOC purview.

1.3.9.13. Provide Quick Response Checklist support during the Commercial Aircraft Mishap Exercise upon commercial airline call-ins to the 618 AOC commercial controller's desk.

1.3.10. **AFIMSC Det 9 will:**

1.3.10.1. Support CRAF aircrew chemical, biological, radiological, and nuclear warfare defense requirements in accordance with AMC Pamphlet 10-260.

1.3.10.2. Ensure appropriate funding and programming for CRAF CWDE.

Section 1B—Organization

1.4. AMC/CC: If requirements dictate, AMC/CC will recommend CRAF activation to the TCCC. Upon receiving SECDEF approval, AMC/CC will execute the activation authority.

1.5. HQ AMC/A3/10/. Prior to activation HQ AMC/AMC/A310/10 is responsible for requesting increased volunteerism from the carriers and notifying industry of pending activation. Daily operations prior to CRAF activation, the HQ AMC/AMC/A310/10 retains flag officer oversight of CRAF programmatic functions. However, once activated, the command, control and operational employment of those carriers is under the purview of the 618 AOC Commander (618 AOC/CC). This responsibility is consistent with both their command of daily AMC operations and the staff expertise required to do so.

1.6. USTRANSCOM/AQ (or TCAQ). Responsible for procurement and contract management of commercial airlift services. TCAQ plays an integral role in all phases of commercial operations, from assigning routine missions to higher Ops tempo, full CRAF activation, and post activation actions. TCAQ's expertise and input is essential to the requests for increased volunteers, operation of the CRAF Cell, to activation decision-making. TCAQ monitors and reports financial data supporting Commercial Augmentation and notifies appropriate offices when additional funding is required.

1.7. HQ AMC/A3B (or A3B). Directly responsible for the functional management of the CRAF program. Prior to and during CRAF activation, AMC/A3B acting as the AMC CRAF Cell augments and coordinates with the 618 AOC for management of CRAF resources. CRAF Cell personnel normally support contingencies from the AMC/A3B office. This cell may be required to stand up independently. See **Chapter 3** for details.

1.8. 618 Air Operations Center (AOC). 618 AOC schedules and tracks all CRAF aircraft supporting AMC missions and if requested will provide information support to AMC leadership. If activated, the AMC CRAF Cell (see 3.6.1) will provide support to the 618 AOC as required. A secondary requestor of CRAF information may be the USTRANSCOM/J3 (Global Operations Center [GOC]). CRAF information is provided in support of TCCC's decision cycle.

1.9. AMC/Mobility Watch Director. HQ AMC/A35 Division Chief directs the CBS and is responsible for all CBS activities.

1.10. AMC/Mobility Watch. Chaired by AMC/CD and comprised of the HQ AMC Directors and Special Staff Agency (SSA) chiefs, the CBS, working in conjunction with the 618 AOC provides AMC/CC with a flexible support staff tailored to meet worldwide air mobility requirements during times of crisis. When activated, the Mobility Watch provides the AMC Commander expedited staff action and a single focal point within the AMC staff for mission planning, management, and command and control of AMC forces during time-sensitive operations.

1.11. Technical Advisory Group (TAG)/Mobility Representative (MOBREP). TAG is a team of qualified airline representatives called MOBREPs, who are designated and provided by CRAF carriers to furnish technical advice and information designed to provide maximum coordination, efficiency, and effectiveness in the use of the CRAF. TAGs may be utilized during peacetime and during CRAF activation. TAG members may be selected from any or all CRAF carriers. The overriding prerequisite for selection must be the specific technical assistance needed for development, maintenance, and execution of adequate CRAF plans. Before and during activation, TAG expertise must be incorporated into CRAF planning, as needed.

1.12. CRAF Operations Support. The material and personnel who assist in the execution of CRAF operations, as needed, during CRAF activation (see **Chapter 3**). This support may consist of contracting with carriers for logistics support among other things.

Section 1C—Definitions

1.13. Aircraft Call-up: After a stage, segment, section, and/or element of CRAF is activated, the formal act of notifying a CRAF carrier that certain aircraft are required to meet DOD airlift requirements in response to a CRAF activation. Aircraft called up shall be given specific directions on where to relocate and scheduled departure times. Aircraft should be called up by registration number. Substitute aircraft of equal capability may be provided when acceptable to AMC/A3BC and approved by the contracting officer.

1.14. Aircraft Response Time: For AMC/A3BC planning and exercise purposes this is the elapsed time after carrier notification of CRAF activation and TCAQ for mission assignment.

1.15. Civil Airlift Support Specialist (CASS): CASS personnel are civilian airline employees with extensive knowledge in civilian logistics and aircrew operations.

1.16. CRAF: Voluntary DOD program in which civilian air carriers certificated under FAA FAR Part 121 rules contract to provide augmented airlift during non-activation and activation periods in exchange for entitlement to routine DOD business (troop charters, cargo missions, etc.).

1.17. CRAF Activation: The formal act of notifying CRAF carriers that a CRAF stage, segment, section, and/or element, or any portions thereof, are activated and operational. TCCC, with the approval of the Secretary of Defense (SECDEF), can activate any of the three stages of the CRAF. Per MOU, DOT concurrence is required for allocation of aircraft for CRAF Stage III activation. CRAF aircraft may be used up to the full numbers composing whichever stage has been approved by the SECDEF.

1.18. CRAF Deactivation: The formal act of notifying CRAF carriers that a CRAF stage, segment, section, and/or element, or any portions thereof, are deactivated and no longer operational.

1.19. CRAF Element: As part of a section, a CRAF element is identified as either passenger or cargo service.

1.20. CRAF Section: The International and National (Domestic) Segments are organized further by section. The sections for the International Segment are Long-range and Short-range

1.21. CRAF Segments: The largest units within CRAF. There are two CRAF Segments: International (Long-range and Short-range), and National (Domestic).

1.22. CRAF Stage: A portion of CRAF that may be activated for use in meeting JCS airlift requirements in support of U.S. military involvement in worldwide contingencies.

1.23. Dry Lease: A dry lease is a leasing agreement where airplane funding entity (lessor, provides an airplane without aircrew, ground staff, etc.

1.24. Enabling Concept: Optional force module used to provide military support to an ISB includes Intel, supply, and civil engineering war readiness support. See **Chapter 4** for further details.

1.25. Intermediate Staging Base (ISB): Commercial carrier stop added for servicing, providing support, and/or equipment prior to flying into an area of responsibility (AOR). Location can be either a commercial or military airfield but is generally a location familiar with handling commercial aircraft.

1.26. Notification: Officially notifying CRAF carriers or AMC of an impending, or actual CRAF-related activity. Notification is considered acceptable if received by either party by telephone followed in writing, or by electronic message or facsimile.

1.27. Wet Lease: A wet lease is a leasing arrangement whereby one airline (the lessor) provides an aircraft, complete crew, maintenance, and insurance (ACMI) to another airline or other type of business acting as a broker of air travel (the lessee), which pays by hours operated.

1.28. World-Wide Operations Capability: Contractor will have the following areas listed on their B050 - Authorized Areas of En Route Operations, Limitations, and Provisions; Africa, Asia, Atlantic Ocean (to include NAT/HLA, above and below NAT/HLA, islands and nations, South of New York and Santa Maria Oceanic FIRs, Blue Spruce Routes, and WATRS), Australia and New Zealand, Canada, Caribbean Sea, Central America, China, Europe and the Mediterranean, Indian Ocean, Mexico, Middle East, Pacific Ocean (to include Central and South, North Pacific, Pacific islands/nations, Russia Mongolia and CIS, South America. Exceptions for contractors to be assigned to segments of the 312 not currently assigned to will be approved by HQ AMC/A3B.

Section 1D—CRAF Breakdown

1.29. CRAF Stages. Commander U.S. Transportation Command (TCCC), with the approval of the SECDEF may activate any stage of CRAF when expanded civil augmentation of military airlift activity is required. Once activation is approved, TCCC may activate and deactivate the segments, sections, or elements, or aircraft within the activated stage, as required.

1.29.1. **Stage I - Committed Expansion.** This stage is activated to support substantially expanded peacetime military requirements or a minor regional contingency when AMC organic airlift capability cannot meet both deployment and other airlift requirements simultaneously.

1.29.2. **Stage II - Defense Airlift Emergency.** This stage is activated to support a defense airlift emergency. It responds to requirements greater than Stage I, but less than full national emergency. For example, this airlift expansion may support a major theater war.

1.29.3. **Stage III - National Emergency.** This stage is activated to support a declared national defense-oriented emergency or war, or when otherwise necessary for national defense. This airlift expansion involves total CRAF airlift capability, made available for airlift emergencies involving DOD operations in the following situations:

1.29.3.1. During multiple major theater wars, during a defense-oriented national emergency declared by the President, or in time of a national emergency declared by Congress.

1.29.3.2. In a national security situation short of a declared defense-oriented national emergency.

1.29.3.3. Activation of CRAF Stage III presumes that the Secretary of Transportation has been authorized to exercise presidential priorities and allocation authority.

1.30. Composition of the Fleet. The CRAF is composed of U.S. registered civil transport aircraft that are suitable and operationally capable of performing airlift for the DOD. The number and type of aircraft are identified to satisfy long-range international, short-range international, and domestic airlift requirements. Principal considerations in determining aircraft suitability are range, payload, block speed, and configuration. In addition, a minimum flight deck crew to aircraft ratio of 4:1 is required for acceptance into the CRAF international segments. The Domestic segment shall provide sufficient personnel, equipment, and materials to enable at least 10 hours per day utilization of each aircraft assigned to the CRAF program. Flight deck crewmembers must be U.S. citizens, and cannot include military Reserve and National Guard members, however, during CRAF activation, such personnel may be used in CRAF carrier work until such time as their military units have alerted them for recall to active duty. Numbers of committed aircraft can be found in AMC HQ Form 312, CRAF Capability Summary, maintained and published by HQ AMC/A3BC (hereafter referred to as ―A3BC).

1.31. Requirements for CRAF Membership. The following conditions must be met before a carrier can participate in the CRAF program:

1.31.1. The carrier must be a U.S. flagged FAA Part 121 carrier.

1.31.2. The carrier must be approved by the Commercial Airlift Review Board (CARB).

Section 1E—Aircraft Equipment Requirements

1.32. Aircraft Passenger/Cargo Equipment.

1.32.1. Passenger aircraft will be configured in accordance with the FARs, the Defense Transportation Regulation, and airlift services contract.

1.32.2. Refer to AMCPAM 10-402v1, DOD Contracted Airlift Load Planning Information for additional guidance.

1.33. Aircraft Spare Parts. Each CRAF carrier will determine spare parts required to accomplish their assigned mission. Carriers should consider all available sources of supply in planning for anticipated spares support.

1.34. Emergency and Safety Equipment. Emergency and safety equipment required by FAR Part 121.339 satisfy CRAF extended overwater requirements, and those required by FAR Part 121.353 satisfy CRAF flight over uninhabited terrain.

1.35. Navigation Route Kit (NRK). The NRK, comprised of DOD Flight Information Publications (FLIP), is provided by the government through the National Geospatial-Intelligence Agency (NGA) and the Defense Logistics Agency (DLA). NGA publishes FLIP and DLA manages FLIP accounts distribution. The initial kit requirement will be established through AMC/A3B. Afterwards, CRAF carriers should communicate directly with DLA for matters concerning required FLIP accounts and recurring distribution (see **Attachment 2**).

Section 1F—Mobilization Value (MV)

1.36. General. MV is a relative measure of the value that DOD places on commercial aircraft for meeting wartime requirements.

1.37. Basic MV Factors. MV computation is based on aircraft payload capability, block speed, range, and productive utilization rate. Computation data is derived from the standard equipment, configuration, and performance capability of each aircraft.

1.38. International Segment MV Computations. Computations are based on the relative capability of international, long-range, and short-range aircraft. The aircraft chosen as the base aircraft is given an equivalent factor of 1.

1.38.1. **Source Data.** MV is computed from data submitted by carriers on the CRAF Aircraft Basic Data Sheet and the CRAF Aircraft Performance Data Sheet. These Data Sheets are part of the solicitation for airlift services and approved data must be on file in AMC/A3B to receive MV points.

1.39. Time Period for Computing and Recomputing MV. MV will be initially computed after the carriers submit their CRAF Aircraft Data Sheet and CRAF Aircraft Performance Data Sheet to TCAQ who will provide to AMC at contract solicitation. Afterwards, if there are changes to the CRAF fleet, TCAQ will compute MV as needed, throughout the contract period.

Section 1G—Logistics

1.40. Aircraft Operations. CRAF aircraft supporting DOD airlift requirements during a CRAF activation will be operated in accordance with appropriate Federal Aviation Regulations (FARs) waivers, deviations, or exemptions as applicable.

1.41. Aircraft Maintenance. Maintenance of CRAF aircraft is the responsibility of the operating carrier and will be performed in accordance with appropriate FARs waivers, deviations, or exemptions where applicable.

1.41.1. U.S. military commanders are authorized to furnish emergency aircraft maintenance, within the limits of existing capability, on a reimbursable basis. Carrier will provide a qualified supervisor (flight deck crew member, if available) when maintenance is performed by the military.

1.42. Logistics Support. CRAF logistics support will be coordinated with the CRAF Cell and the 618 AOC and will be monitored by TCAQ (Contract Airlift Office).

1.42.1. Use of Existing Carrier Assets. To the maximum extent possible, logistics support of CRAF aircraft will be provided by the participating carrier and obtained from existing carrier assets. Shortages in such support may be supplemented by carrier contract and/or arrangements with other sources. If CRAF carriers cannot support themselves, requests for assistance should be forwarded to CRAF Cell.

1.42.2. Use of Government-furnished Material Handling Equipment (MHE). Government-furnished MHE will be used at military onload/offload airfields whenever possible. Upon TCAQ approval, augmenting commercial resources may be acquired under the Changes Clause of the Airlift Services contract in situations where government furnished MHE is unavailable or inadequate. AMC will transport and position MHE that exceeds the carrier's capability to position. HQ AMC/A3/10 may authorize transport of AMC-provided MHE on carrier missions on a case-by-case basis.

1.42.3. Ground Support and Service. At military airfields, the government will provide common ground support equipment to CRAF carriers as required. At civil airports, carriers

will use civil sources to the maximum extent possible, reporting deficiencies to the AMC CBS. Peculiar equipment required by the carriers left at military bases will be the responsibility of the carrier. These items will be maintained by the responsible carrier.

1.42.4. Petroleum, Oil, and Lubricants (POL). Prior to CRAF activation and when possible, USTRANSCOM Joint Petroleum Office (JPO), in conjunction with HQ AMC/A4, will coordinate with the 618 AOC to determine POL requirements and will forward these to the Defense Energy Support Center (DESC). HQ AMC/A4RX will coordinate with USTRANSCOM/JPO, AMC staff agencies, and DESC as required.

1.42.4.1. Upon activation, CRAF carriers may purchase POL products at military airfields and/or civil airports in accordance with USAF War and Mobilization Plan, Volume 4 (WMP-4).

1.42.4.2. Military Bases. Fuel products of military specifications will be provided to carriers, as required, on a reimbursable basis. Military fuels JP-5 and 8 are acceptable substitutes for commercial fuels. CRAF carriers will provide their own unique requirements of commercial type oils, lubricants, and fluids.

1.42.4.3. Commercial airports. Carriers will arrange for POL, using available civil sources to the maximum extent possible, reporting deficiencies to the DLA Energy and TRANSCOM/JPO.

1.42.4.4. DLA Energy will ensure that adequate POL facilities and resupply capability are available at all planned onload/offload bases (both commercial and military).

1.42.4.5. Carriers should ensure fuel is available at enroute transit and alternate airfields. Unusual POL needs should be coordinated by the carrier

1.42.4.6. Into-plane servicing of POL at commercial bases will be a responsibility of the carrier.

1.42.5. Reimbursable or Equitable Exchange. Logistics support, other than that listed in the Airlift Services contract, will be furnished at military airfields, if available, on a reimbursable or equitable exchange basis.

1.42.6. Government-Furnished Cargo Tie-Down Equipment. Military customer being moved is responsible for providing the tie-down equipment for palletized and non-palletized cargo. For non-palletized cargo, AMC is also responsible for providing pallets and couplers required for subflooring. The carrier is responsible for securing pallets to the aircraft.

1.42.7. Pre-stocking War Readiness Material (WRM). Programming, budgeting, funding, procuring, and pre-stocking WRM is unauthorized for specific support of the CRAF.

1.42.8. Airframe and Engine Spares. Support for airframe and engine spares will be obtained from existing airline industry resources (in accordance with **paragraph 1.33**.).

1.43. Manpower. All personnel required in the performance of CRAF operations at civil airports shall be furnished by the CRAF carriers. (**EXCEPTION:** Passenger service agents shall be furnished by AMC at onload and offload sites, to marshal passengers aboard the aircraft and provide the aircraft captain with a manifest that shall include actual, individual weights of passengers and baggage.)

1.43.1. CRAF Loading Supervisors. During CRAF activation, carriers may be required to provide highly qualified and certified loading supervisory personnel to report where directed by HQ AMC/A3B. Any decision to position key personnel will be designed to facilitate enhanced airlift movement.

1.43.2. Reserve or National Guard Forces Commitment. For planning purposes, carrier personnel who have a military Reserve or National Guard commitment will not be considered as part of the 4:1 flight deck crew required for acceptance into CRAF. However, during CRAF activation, such personnel may be used in CRAF carrier work until such time as their military units have alerted them for recall to active duty.

1.43.3. U.S. National vs. Indigenous Personnel. During CRAF activation, all flight deck crewmembers must be U.S. citizens. In foreign countries, indigenous personnel determined not to be a threat to U.S. assets may be used to fulfill other personnel requirements.

1.43.4. Transition from Civil to Military Support Operations. The CRAF program structure is designed to permit supporting personnel to transition from commercial operations to military support operations in the most expeditious and efficient manner. Procurement and supervision of all personnel required by the CRAF carriers to conduct military support operations will remain the responsibility of each carrier.

1.43.5. Benefits and Compensation. Persons assigned to CRAF will remain on the payroll of their original employer and will receive personnel benefits accorded by that employer. Rates of compensation will be determined by the employing carrier.

1.43.6. Officer Status Authorized for CRAF Personnel. CRAF personnel in the following categories will be afforded the courtesies of officer grade: All aircrew, as well as professional and technical personnel including dispatchers, meteorologists, doctors, and nurses.

1.43.7. Use of Civil Airfields. CRAF aircraft will use AMC MAWG-A-approved enroute civil airfields whenever possible, to reduce saturation at military airfields.

1.43.8. Leased Aircraft. In accordance with National Security Decision Directive #280, National Airlift Policy 24 July 1989, airlift procurement through the CRAF program will be suitable and responsive to military requirements. As such, aircraft, which are wet leased to another carrier without a retrieval clause, are not considered eligible for CRAF participation. Aircraft, which are dry leased, either to U.S. carriers with whom AMC cannot execute a CRAF contract or to foreign carriers not approved by the TCCC, are not considered eligible for CRAF participation.

Section 1H—Fleet Build

1.44. Contractual Basis. The international CRAF contracts facilitate CRAF participation and incorporate all the contractual provisions necessary for its operation. This contract establishes the contracting carriers' legal obligations to perform and are the basis for payment for all services rendered. Note: If there are any contractual conflicts between this instruction and any AMC airlift services contracts, which supports the CRAF, the international contract takes precedence.

1.45. Airlift Requirements. International (long-range and short-range) airlift requirements for national defense contingencies are based on JCS approved plans. (**Figures 1.1** and **Figure 1.2** are for reference only as an example of planning factors based on JCS approved plans for each stage

of activation. The most current information can be obtained from TCAQ or AMC/A3BC). Cargo and personnel requirements that may require airlift support via civil aircraft are extracted from these plans. They range from channel missions that maintain manageable levels at each port, to augmenting the active force in deployment and resupply. Domestic airlift requirements are currently based on an as-needed basis to move DOD personnel throughout the CONUS during CRAF activation.

Figure 1.1. Long-Range Requirements.

Long-Range Requirements:	Stage I	Stage II	Stage III
Cargo WBE:	15	75	140
Passenger WBE:	16	87	104

Figure 1.2. Short-Range Requirements.

Short-Range Requirements:	Stage II	Stage III
Cargo WBE:	4	13
Passenger WBE:	35	35

1.46. Aircraft Allocation. HQ AMC/A3B determines aircraft suitability prior to submitting allocation requests to the Department of Transportation (DOT), Research and Special Programs Administration, Office of Emergency Transportation (OET). The Director, OET, allocates U.S. registered civil aircraft to the CRAF by the assigned FAA registration number, in accordance with the Defense Production Act (DPA). Issues regarding the DOT allocation of CRAF aircraft or DOD requirement for CRAF aircraft should be presented to the Director, OET, for review and resolution (CDRL 003).

1.47. Allocation Determination.

1.47.1. Long- and short-range international CRAF aircraft are allocated by OET to satisfy DOD wartime airlift requirements, as identified by Joint Chiefs of Staff (JCS), the combatant commanders, and major commands.

1.47.2. Domestic CRAF aircraft are allocated by OET to satisfy increased DOD airlift requirements in the CONUS theater during a declared national emergency.

Section 1I—Aircraft Selection Criteria

1.48. General. Aircraft allocated to the CRAF are selected to meet DOD airlift requirements. Therefore, each segment of the CRAF is equipped commensurate with its anticipated tasking and are selected for each segment with the following criteria:

1.48.1. **International Segment, Long-Range Section (Cargo & Passenger):**

1.48.1.1. Worldwide Operations Capability. Aircraft must have Worldwide Operations Capability and must be equipped with maintained and certified navigation,

communications, and life-support systems/emergency equipment required to operate in transoceanic airspace, and on international routes in accordance with FAR.

1.48.1.2. Range. The standard range capability for long range is 3,500NM for both passenger and cargo aircraft while carrying a productive payload. AMC, at its option, may include aircraft with a shorter-range capability when there is a shortfall in long-range capability. However, the minimum acceptable range for this segment/section is the distance from San Francisco CA to Honolulu HI (2,350NM) with a productive payload. A productive payload is 75% of the aircraft's maximum payload.

1.48.2. **International Segment, Short-Range Section:**

1.48.2.1. Cargo. Aircraft must be turbojet or turboprop, equipped for extended overwater operations, and capable of transporting a productive payload a minimum distance of 1,500NM, departing at sea level in a normal atmosphere. The preferred aircraft should have a door size that will accommodate a standard 463L pallet measuring 88 x 108 inches.

1.48.2.2. Passenger. Aircraft must be turbojet or turboprop, equipped for extended overwater operations, and capable of transporting a productive payload a minimum distance of 1,500NM, departing at sea level in a normal atmosphere.

1.48.3. **Domestic.**

1.48.3.1. Cargo. Aircraft must be turbojet or turboprop and capable of transporting a minimum ACL of 32,000 lbs a minimum distance of 1,500NM, departing at sea level in a normal atmosphere. Aircraft must have a door size that will accommodate a standard 463L pallet measuring 88 x 108 inches.

1.48.3.2. Passenger. Aircraft must be turbojet or turboprop and capable of transporting a minimum of 75 passengers with a corresponding minimum ACL of 30,000 lbs a minimum distance of 1,500NM, departing at sea level in a normal atmosphere.

1.49. Assignment of Aircraft. After aircraft are offered and determined eligible for CRAF assignment, they are assigned to the CRAF stages, completing segments, sections, and elements independently of each other, by the CRAF Branch in HQ AMC/A3B (A3BC). Aircraft will be assigned to each stage until the total offered WBE meets the airlift capability requirements. Assignments are made to fulfill the requirements to as close to the specified level as is reasonably possible. Stage assignments are final and not subject to dispute. AMC/A3BC reserves the right to assign aircraft, when necessary, to meet CRAF requirements, to include maintaining an appropriate mix of aircraft types for all stages. This maximizes CRAF planning and operational flexibility.

1.49.1. **International - Long & Short-Range.**

1.49.1.1. Stage I. For the long-range international section world-wide capable aircraft suitably equipped with required communication and navigation capabilities, and required life support systems/emergency equipment required to operate in trans-oceanic airspace and on international routes of CRAF, a minimum of one (1) aircraft from each Contractor, will be assigned to Stage I. This aircraft will typically be the most capable aircraft, established by WBE or another characteristic as determined by AMC/A3BC. AMC/A3BC will rank order the eligible carriers from highest WBE Stage I offer to lowest which will affect the flow of the bricklaying process for stages. The Contractor may nominate an

aircraft for Stage I assignment for AMC/A3BC consideration. Contractors who desire additional aircraft assigned to Stage I, above the minimum as stated above, must indicate so on the Appendix 3A, List of Aircraft identifying the additional aircraft by tail number or quantity/type, they are offering for assignment. After the minimum of one (1) aircraft from each Contractor has been assigned to Stage I, additional aircraft required to fulfill the requirement will be selected only from those specifically offered to Stage I as described above. AMC/A3BC will then select additional aircraft from those offered for Stage I assignment, alternating among the Contractors in the rank-ordered sequence in a bricklaying process, selecting the most capable remaining aircraft from each carrier. This process will continue until the requirement has been fulfilled or the available pool has been exhausted. Maximum flexibility is required in CRAF planning; therefore, in long-range international segment aircraft assignment considerations, Stage I passenger section should have a minimum of 80 percent wide body aircraft and Stage I cargo a minimum of 60 percent wide body aircraft. To limit the overreliance on any single carrier, AMC/A3BC retains the right to apply a cap to the amount of the Stage I requirement that any one carrier can fulfill. The cap will be determined by the CO based on the best interests of the Government.

1.49.1.2. Stage II. The long-range international section of Stage II will be filled first by all aircraft in Stage I, and the remainder of Stage II will be filled utilizing a "bricklaying" process similar to that described in long-range Stage I above but based on each carrier's total aircraft offer. When beginning to build Stage II fleet, begin with the carrier listed immediately following the completion of Stage I and continue the cycle until the requirement has been met. Stage II short-range international section will be filled utilizing procedures similar to those above, with a minimum of one (1) aircraft assigned from each carrier. There is no "volunteerism" structure supporting short-range international.

1.49.1.3. Stage III: The international section (long and short-range) of Stage III will be filled first by all aircraft in Stages I and II, as appropriate. The remainder of Stage III will be filled from those aircraft not yet stage assigned utilizing the bricklaying process previously described. When beginning to build Stage III fleet, begin with the carrier listed immediately following the completion of Stage II and continue the cycle until the requirement has been met. Stage III will be filled to approximately 105% of the requirement specified in CRAF Contract (PWS).

1.49.2. Contractors receiving IDIQ awards and FCL approval after the initial submission deadline will be limited to one (1) aircraft mandatorily assigned to Stages I, II and III, as appropriate, and will not earn MVP until the following option period.

1.50. Carrier Aircraft Status Reporting.

1.50.1. CRAF carriers are required to report to TCAQ when a CRAF-allocated aircraft is:

1.50.1.1. Destroyed or suffers major damage.

1.50.1.2. Sold or leased, to include the identity of the transferee, date and place of transfer, and the terms and conditions of the transfer.

1.50.1.3. Registered under a different number or removed from U.S. registration.

1.50.1.4. An aircraft is placed in storage and placed in a status such that it cannot be returned to mission capable status within 24 hours.

1.50.1.5. When an aircraft is projected to be or has been taken out of service for maintenance, repair and overhaul (MRO) or modification exceeding 90 consecutive calendar days.

1.50.1.6. When an aircraft has not been airborne under its own power for 90 consecutive calendar days.

1.50.1.7. Status needs to be coordinated with AMC/A3B.

Chapter 2

CRAF ACTIVATION

Section 2A—Overview

2.1. General. During activation, CRAF mission oversight is the responsibility of the AMC CRAF Cell. The scheduling of CRAF missions is similar to the current procedures used by AMC and the CRAF carriers in scheduling peacetime DOD airlift mission. This chapter contains guidance pertaining to the procedures employed to manage the additional workload created by CRAF activation.

2.2. Purpose. To ensure proper use of CRAF resources during CRAF activation and integrating AMC, USTRANSCOM, 618 AOC, and Commercial Carriers to ensure proper airlift balance.

2.3. Mission. The primary objective is to schedule and manage CRAF missions effectively. The CRAF Cell, in coordination with TCAQ and the 618 AOC, will exercise CRAF mission oversight.

2.3.1. The CRAF Cell, in coordination with TCAQ, determines the best type of aircraft available from among current CRAF participants for specific requirements. The carrier is then notified that it has been designated for the mission and submits its aircraft specific information to the originating 618 AOC division and TCAQ.

2.4. Concept. Mission scheduling will be accomplished by the following: CRAF Cell; TCAQ; 618 AOC/ALDRC, and CRAF carrier operations centers.

2.5. CRAF Mitigation Procedures. Prior to requesting CRAF activation, discussions and planning workgroups must be established with key representation from USTRANSCOM, AMC, and the commercial carriers to balance requirements against airlift capacity.

2.5.1. USTRANSCOM will activate the Crisis Action Team (CAT) during a crisis. The J3 will activate an Operational Planning Group (OPG). The OPG should be all-inclusive and invite all potentially interested parties. The group will then be tailored to routinely include offices with a direct vested interest in the current TPFDD planning and decisions. Key members of the CRAF Activation Process will be present in the OPG when CRAF Activation is a potential course of action. If required, the OPG will activate the CRAF Working Group to answer OSD level questions.

2.5.2. AMC will stand up an OPT to determine concept of operations and feasibility of commercial air support with required representatives from A3B, A35, A38, MAWG-A, 618 AOC.

2.5.3. The CRAF Working Group and the OPT will seek the following mitigation measures which should be executed to the maximum extent allowable. If the steps below are not adequate to fulfil the requirements, then senior leadership coordination will be needed to discuss possible CRAF activation.

2.5.3.1. Schedule and utilize other forms of transportation as much as possible.

2.5.3.2. AMC/A3/10 will direct the reduction of the training allocation for wings.

2.5.3.3. Seek volunteerism from ARC and AETC units.

2.5.3.4. If requirements aren't met via volunteerism, request SECDEF decision to Execute Title 10 mobilization of the ARC.

2.5.3.5. In coordination with TCAQ, J3, JDPAC and AMC, seek volunteerism from industry to leverage additional contract lift via CRAF Summits either virtual or in-person.

2.5.3.5.1. Carriers may volunteer to perform missions prior to and during CRAF activation. When existing volunteer capacity does not meet forecast mission requirements, TCAQ will initiate through AMC/A3B a request for additional volunteerism. Historically, AMC/A3B has held teleconferences with carrier MOBREPs to specify additional mission requirements. Prior to this call, TCAQ and AMC/A3B will determine the likely type of aircraft and carriers whose unused capacity would meet DOD mission needs.

2.6. Manpower and Personnel. When CRAF is activated, CRAF carriers will establish a 24-hour/day operations center manned by qualified personnel and located at the carrier's designated operations centers. After the activation of Stage II and prior to Stage III activation, selected CRAF carriers will, upon the request of AMC A3BC, provide predesignated TAG personnel to HQ AMC, Scott AFB IL. To assure appropriate liaison representation and to facilitate assimilation of tasks, carriers should provide personnel with a high degree of knowledge and experience in the carrier's overall operations and management.

2.6.1. **CRAF Cell Personnel.** A3B Division Chief/designated representative will be cell director and may adjust the following list, and 24-hour requirement as needed. The CRAF Cell will be manned with at least two mandatory individuals, available 24-hours/day, from the following offices:

2.6.1.1. A3BC

2.6.1.2. TCAQ – Name a Primary/Alternate and together, be available for 24 hrs/day

2.6.1.3. 618 AOC/ALDRC. (Note: ALDRC is manned during normal M-F duty hours and is on-call 24/7.)

2.6.1.4. Intel – Senior Intelligence Duty Officer (SIDO), AMC/A2, MAWG-A (as required)

2.6.1.5. AMC/A4O

2.6.1.6. TAG (as required)

2.7. Responsibilities.

2.7.1. **CRAF Cell:**

2.7.1.1. Send appropriate CRAF activation messages to carriers upon receipt of appropriate authority from TCCC. Messages will be released by AMC/A3B.

2.7.1.2. Coordinate with J3/AMC/A35 to determine a need to establish an intermediate staging base as required after coordination with TCAQ.

2.7.1.3. Monitor the setup of CRAF missions in coordination with the 618 AOC.

2.7.1.4. Monitor carrier capability status.

2.7.1.5. Should the national emergency deteriorate to the point that the President must exercise their statutory powers under Title 10, U.S. Code, Section 2644; the AMC CRAF Cell will assign missions directly to surviving CRAF resources through available communications. In times of war, the President, through the SECDEF, may take possession and assume control of all or part of any system of transportation to transport troops, war material, and equipment, or for other purposes related to the emergency. So far as necessary, they may use the system to the exclusion of other traffic.

2.7.1.6. Ensure that sufficient support airlift is made available, when requested by CRAF carriers, for the initial movement and subsequent resupply of CRAF carrier enroute support materials and personnel. Transportation of resupply support, whether by air or surface, will be by the most expeditious means available and as dictated by the urgency of the requirement.

2.7.1.7. Requests for support must be forwarded to the CRAF Cell.

2.7.2. **AMC/AMC/A3BC:**

2.7.2.1. Set a crisis battle rhythm with the carriers for continuous communication via daily sync as often needed

2.7.2.2. Coordinate with MAWG-A and the 618 AOC Planning Directorates.

2.7.2.3. Identify personnel required to support the CRAF Cell.

2.7.2.4. Ensure additional space and office equipment are available to support CRAF activation requirements to include possible TAG representation.

2.7.2.5. AMC/A3BC will provide the total planning number for CRAF chemical bag program to HQ AMC/A4RE.

2.7.2.6. CRAF Cell or AMC/A3BC will provide 436 LRS, Dover AFB and AMC/A4RE with guidance/instructions on the movement of CRAF chemical bags to/from Dover AFB in support of real world CRAF missions.

2.7.2.7. Actively participate in any Operational Planning Teams to discuss current use of activated CRAF fleet and determine the proper time to begin deactivation.

2.7.3. **TCAQ:**

2.7.3.1. Identify personnel to man the CRAF Cell.

2.7.3.2. Initiate expanded acquisition and administration procedures for CRAF contract missions.

2.7.3.3. Advise on mission utilization of activated tails and ensure they are flagged and sent to AMC for release.

2.7.3.4. Provide available activated aircraft to the 618 AOC for mission assignment.

2.7.3.5. Actively participate in any Operational Planning Teams to discuss current use of activated CRAF fleet and determine the proper time to begin deactivation

2.7.4. **618 AOC:**

2.7.4.1. Identify need to expand/decrease CRAF operations to ensure that CRAF can be deactivated in a timely manner.

2.7.4.2. Work in conjunction with TCAQ to schedule activated CRAF aircraft to missions.

2.7.4.3. Coordinate foreign/host nation overflight and/or landing clearance requests with the 618 Air Operations Center's Diplomatic Clearance Branch (618 AOC/ MODZ) as necessary.

2.7.4.4. Assist with coordination for airlift of hazardous materials (HAZMAT).

2.7.4.5. Monitor CRAF missions and any delays while in execution.

2.7.4.6. Actively participate in any Operational Planning Teams to discuss current use of activated CRAF fleet and determine the proper time to begin deactivation.

2.7.5. **AMC/A2:**

2.7.5.1. Coordinate with the Mission Assurance Working Group Air (MAWG-A) ensuring inclusion of civil airlift considerations.

2.7.5.2. Conducting airfield and country threat assessments for the HQ AMC/A3/10 to determine risk to CRAF and commercial chartered / contracted aircraft.

2.7.5.3. Coordinate threat assessments as needed to assist the FAA in developing Special Federal Aviation Regulations (SFARs) and any associated exemptions.

2.7.5.4. Functioning as the AMC focal point for coordinating threat assessments for commercial flights with Theater Air Components as necessary.

2.7.5.5. Developing plans to provide intelligence briefings and debriefings to CRAF activated commercial aircrews at main and forward operating bases and staging locations transited by CRAF aircraft.

2.7.5.6. Preparing to flight follow and provide real time threat warning support to CRAF missions during mission execution via the 618 AOC SIDO.

2.7.5.7. Provide intelligence on significant events which may impact CRAF activated or AMC contracted/chartered commercial flights at any location worldwide on a monthly basis, as needed based on dynamic operating environments, or by request from either AMC/A3B or the MAWG-A.

2.7.5.8. Immediate notification to individual carriers of any threat reporting correlated to a specific commercial mission, coordinated with 618 AOC SIDO, USTC/J2, the Intelligence Community, and the FAA.

2.7.6. **AMC/A4T:**

2.7.6.1. CRAF carriers may be tasked to provide wide-body MHE from their resources where compatible military equipment is not available. Positioning of carrier MHE will normally be the carrier's responsibility.

2.7.7. **TAG:**

2.7.7.1. Liaison between carrier and military to ensure that missions are planned and executed in an efficient manner.

2.7.7.2. Has the authority to make command decisions on activated missions or can quickly access those can.

2.7.8. **USTC/J2:**

2.7.9. **USTC/J3:**

2.7.9.1. Validates transportation requests, determine transportation mode, and distribute transportation requirements to appropriate component.

2.7.9.2. In coordination with AMC, recommends to TCCC that CRAF activation is required to augment organic capacity and meet requirements.

2.7.10. **USTCJ5/J4:**

2.7.10.1. Interfaces with Office of SECDEF, Joint Staff, Services, DOT/OST, DOT/FAA, commercial air carries, and organizations representing commercial air carriers to enable informed management of the command's commercial aviation programs.

2.7.11. **TCAC:**

2.7.11.1. Analyze/monitor requirements for need to activate and deactivation timeline once activated.

2.7.12. **CRAF Carrier:**

2.7.12.1. Schedule crews for mission support and deploy stage crews.

2.7.12.2. Develop mission itinerary in line with AMC airlift requests.

2.7.12.3. Forward aircraft arrival/departure/advisory messages and mission status to the 618 AOC.

2.7.12.4. Advise the CRAF Cell of systemic, non-urgent problems encountered during mission execution. At-need problems during operations are passed via normal command and control channels in accordance with contractual agreements.

Section 2B—CRAF Activation

2.8. General. This section provides an expanded view of basic actions involved in using CRAF, to include key factors affecting its employment. In addition to procedures outlined below, there is a civil air crisis response checklist with supplementary actions to be performed prior to and during CRAF activation. A copy of the checklist is in the AMC/A3BC CRAF Activation book, while copies of the activation/deactivation checklist are included in **Attachment 4**.

2.9. CRAF is activated by TCCC with the approval of the SECDEF. When TCCC has directed CRAF activation, CRAF carriers, DOT/OET, FAA, OSD/TP and other applicable agencies must be advised as soon as possible. The HQ AMC/A3/10 will coordinate with AMC/JA, and AMC/CD prior to the release of an activation message.

Section 2C—AMC CRAF Activation/Deactivation Actions

2.10. CRAF Activation/Deactivation Process. CRAF may be activated/deactivated incrementally or in total, by stage, segment, section, elements, or aircraft. The Government retains the option of activating any portion of each stage or segment, as required. During CRAF activation, USTRANSCOM Acquisition Directorate exercises contract oversight and the contractor retains

operational control. The President or SECDEF can activate CRAF independently or they can approve activation request for CRAF from the TCCC with coordination from AMC/CC.

2.11. Activation Requests. When a supported Combatant Commander provides USTRANSCOM with requirements that exceed the capability of organic airlift, TCJ3 will consult with TCAQ, HQ AMC/A310, 618 AOC, and AMC/A3B through the OPT concerning the activation of CRAF assets to provide additional support. AMC/A3B will coordinate with HQ AMC/A3/10 to recommend activating CRAF.

2.11.1. AMC/A3/10 and the 618 AOC/CC forwards request to activate CRAF to AMC/CC via appropriate command channels.

2.12. Coordination. When AMC and USTRANSCOM agree and advise TCCC that CRAF activation is necessary, TCJ3 will prepare an activation request message. This request presented from TCCC to SECDEF will include authorization to activate all available forces up to and including Stage II. In accordance with a standing MOU between DOT and DOD, a Stage III activation will require a separate request to SECDEF. In any case, once SECDEF approval is granted, the activation process begins.

2.12.1. TCJ3 drafts a request message for TCCC seeking SECDEF approval for CRAF activation. As stated above, TCCC's initial request to SECDEF will specify activation authority for all forces up to and including Stage II. The request should be coordinated through AMC/JA, AMC/CD, and then approved by AMC/CC.

2.12.2. The AMC/CC-signed message is delivered to the Chief of USTRANSCOM/GOC, who in turn delivers it to TCCC. TCCC either sends the request message to SECDEF or verbally requests activation authorization.

2.12.3. SECDEF approves activation and sends approval via response message or verbal response to TCCC. TCCC activates CRAF through AMC/CC.

2.12.4. 618 AOC and AMC/A3B determines what segment, section, and element of CRAF is needed and TCAQ makes assignments.

2.12.5. AMC/A3B sends an activation message and/or e-mail to the air carriers specifying aircraft by carrier, stage, segment, element etc.

2.13. Notification. CRAF activation messages are transmitted over civil circuits to each CRAF carrier. These messages are described as follows:

2.13.1. Request for Declaration of Airlift Emergency and/or CRAF Activation. This message is released by the HQ AMC/A3B with an action copy to TCCC and an information copy to the Chief of Staff, United States Air Force. It should contain necessary data for requesting the activation of CRAF Stages I, II, or III

2.13.2. Activation and Warning messages. Will be released by the AMC/A3B and addressed to all CRAF carriers with an information copy to the identified organizations as listed on the sample CRAF messages in **Attachment 3**. If conditions prevent this message from being transmitted, advance verbal and written notice may have to be given to the carriers to help them prepare as rapidly as possible. This message serves as an advisory for carrier/company planning.

2.13.3. Presidential Authority (Title 10, U.S. Code, Section 2644) Control of Transportation Systems in Time of War. This message is addressed to all CRAF carriers with information to all military and governmental agencies associated with CRAF operations. It advises all concerned that the President has invoked authority under Title 10, U.S. Code and provides the effective date and Greenwich Mean Time (GMT). It also advises the CRAF carriers that mission assignment and AMC Command and Control will function from the 618 AOC. The message will be released by the HQ AMC/A3/10 upon receipt of proper authority from TCCC.

Section 2D—Air Carrier's CRAF Activation Actions

2.14. Air Carrier's CRAF Activation Checklist. During CRAF activation, carriers will receive the messages specified below.

2.14.1. AMC CRAF Activation Warning Message. This document is sent to carriers as a way for them to begin to plan for a possible activation. The sending of this message should only be done if activation is being requested from the TCCC level, however, it is understood that an activation is not guaranteed. When message is received, carriers should:

2.14.1.1. Review the operational and maintenance status of all company aircraft allocated to support Stage III of CRAF.

2.14.1.2. Notify senior executive personnel.

2.14.1.3. Prepare to recall and mobilize all aircraft and aircrews designated to participate in CRAF stage I and II as applicable.

2.14.1.4. Review personnel support requirements.

2.14.1.5. Review the availability of aircraft spares and support equipment.

2.14.1.6. Advise the CRAF Cell of forecasted aircraft availability.

2.14.1.7. Assure aircrew personnel are prepared to travel overseas.

2.14.1.8. For carriers with ISB responsibilities, review needs with TCAQ and be prepared to operate as necessary at the selected stations.

2.14.1.9. Perform checks on all COMSEC equipment to ensure that it is fully functional.

2.14.1.10. AMC CRAF Activation Message. After senior executive personnel have received this message, carriers will ensure that:

2.14.1.11. Personnel are assigned to its operations control center to provide 24-hour coverage.

2.14.1.12. Ensure carrier personnel who have been requested by the AMC CRAF Cell report to HQ AMC at Scott AFB have all training and equipment to perform duties.

2.14.1.13. Provide a list of highly qualified civil airlift support specialist (CASS) personnel to AMC/A3B upon receipt of an activation/warning order or as requested.

2.14.1.14. Standby for aircraft call-up and AMC airlift mission assignment.

2.14.1.15. Airlift Mission Assignment Message. All airlift services performed by CRAF carriers will be substantiated by delivery orders executed by the contracting officer. Upon receipt of an AMC airlift mission assignment, the carrier will:

2.14.1.16. Make available aircraft and aircrews required to perform the mission. Cargo aircraft may require a loading supervisor as part of the crew.

2.14.1.17. Ensure NRKs are current and aboard allocated aircraft. Electronic flight bags loaded with DOD FLIP data may replace paper copy publications along with Commercial SPINS as required.

2.15. Aircraft Call-up/Release. Within each activated stage, segment, and section, AMC may select and call up specific aircraft needed to fulfill the DoD airlift requirement. AMC may elect to call up only a portion of the available aircraft. Upon aircraft call up, the aircraft committed under this contract and requested by the Government shall be ready to be positioned at the location(s) directed by the Government within the allotted timeframe dictated by activation stage. If committed aircraft are not designated for call up within 72 hours after CRAF activation, the aircraft remaining in the Stage/Segment/Element shall be released and the contractor shall receive a minimum of five days' notice of any subsequent call up, unless a higher stage of CRAF is mandated by DoD contingency requirements. If DoD contingency requirements mandate activation at a higher stage (i.e., Stage II or III for an existing Stage I activation), the five days minimum notification requirement is nullified and the appropriate response time to the newly activated stage shall apply.

2.15.1. Volunteers supporting contingency requirements prior to CRAF activation, time permitting, will be given the option for their aircraft to be considered for call-up first. This applies when the CRAF stage and the segment in which their aircraft would normally qualify is activated, but only to the level of aircraft required. If the carrier desires, these aircraft may be considered called up first and released last. After volunteers have committed to activation and have been called up, additional aircraft, if required, shall be determined, and prorated based on MV of aircraft within the segment and section activated.

2.16. Aircraft Response Times. When the CRAF is activated, response times for contractors shall be 24 hours after aircraft call up and mission assignment for Stage I, 48 hours for Stage II, and 72 hours for Stage III.

2.17. Aircraft Substitution during CRAF Activation. Carriers may substitute aircraft of equal or greater capability for aircraft being called up. Such aircraft substitutions must be acceptable to the CRAF Cell and the 618 AOC and be approved by the contracting officer. Substitution after CRAF mission planning commences must be kept to a minimum to avoid conflicts, such as pallet contour issues and overflight and/or landing clearances.

2.18. Minimum Utilization of Long-Range International Aircraft. Contractors with aircraft in the international segment called up for service shall be guaranteed an average daily utilization of 6,000 paid miles for the duration of the call up or for a specified minimum number of days, whichever is longer. Contractors with aircraft in the Domestic segment shall be guaranteed an average daily utilization of 10 hours. This specified minimum call-up duration for a Stage I activation is 11 days and for a Stage II or III activation the minimum duration is 15 days. Only aircraft called up are guaranteed minimum utilization. USTRANSCOM will give at least 11 days' notice of release of a Stage I segment, section, element, or aircraft deactivation and at least 15 days' notice of release of a Stage II or III segment, section, element, or aircraft deactivation. Contractors will utilize the post-release timeframe to integrate their aircraft into commercial service as soon as possible. Negotiation of compensation for under-utilization shall be in accordance with the procedures outlined in the USTRANSCOM Airlift Services Agreement and

shall include all commercial business obtained by the contractor using called-up aircraft. Contractors are obligated to utilize their best efforts to obtain commercial business to minimize Government costs during any period of guaranteed utilization including, but not limited to, the 15-day period following notice of release. Contractors may waive these minimum utilization provisions by notifying the CO in writing.

2.19. Planning Considerations. Unless otherwise specified in applicable tasking messages, planning for the use of CRAF will be predicated upon the following:

2.19.1. Effective C2, through commercial and military communications capabilities.

2.19.2. Use of contractor resources to the maximum extent possible. In the event of a national emergency, the Defense Production Act provides for priority allocation of resources and protects contractors against certain third-party claims.

2.19.3. CRAF carriers will move self-support personnel, equipment, and supplies aboard their own or other civil aircraft in accordance with contractual arrangements and current airlift contract. Carriers are allowed 3% of available allowable cabin load (ACL), by weight, for necessary self-support.

2.19.4. CRAF carriers that are unable to move self-support personnel, equipment, and supplies aboard their own or other civil aircraft will request assistance from the AMC CRAF Cell, who in turn will coordinate with the 618 AOC for support.

2.19.5. CRAF enroute support traffic will be assigned the same movement priority as AMC enroute support traffic.

2.20. Limitation on Use of CRAF Aircraft.

2.20.1. Aircraft Management. In order to minimize cost to the government and disruption of each carrier's civil schedules and service, only those aircraft actually needed by AMC will be called up and those no longer needed will be released to the carrier for commercial operations as soon as possible.

2.20.2. Cargo Loading. Information on types of cargo and load configuration can be found on the following websites for Airbus and Boeing **https://www.airbus.com/en** or Plan Manuals (boeing.com). Some cargo capable wide body aircraft may carry oversize cargo and wheeled vehicles mounted on pallets or loaded directly on a pallet subfloor. Narrow body cargo aircraft can carry bulk cargo, and some may be able to transport wheeled vehicles on pallets, provided the cargo door and floor are compatible with the vehicle being loaded.

2.20.3. Minimum Takeoff/Landing Roll. For general planning purposes by all agencies using this instruction, onload airfields normally require at least 8,000 feet of runway for maximum gross weight takeoffs. Offload airfields require a minimum of 7,000 feet for landing.

2.20.4. Engine Running Onload/Offload (ERO). CRAF aircraft are not suitable for EROs.

Section 2E—Air Carrier's CRAF Deactivation Actions

2.21. Air Carrier's CRAF Deactivation Checklist.

2.21.1. USTRANSCOM, 618 AOC/ALDRC and TCAQ coordinate to confirm the amount of civil air augmentation meets current requirements.

2.21.2. Determine the CRAF capability available. Sustained requirements equal to or less than the number of seats available from volunteers should trigger consideration to deactivate the CRAF.

2.21.3. Reassess the need for continuation of any existing contract response team augmentation with carrier management representatives.

2.21.4. USTRANSCOM, 618 AOC/ALDRC and AMC/A3B will coordinate to determine projected date for deactivation.

2.21.5. Notify carriers of possible CRAF deactivation using appropriate communications systems.

2.21.6. Present findings from above to HQ AMC/A3/10 so they can make a recommendation to AMC/CC and TCCC.

2.21.7. Request TCCC coordinate CRAF deactivation with the CJCS and the Chief of Staff of the Air Force. TCCC will then recommend a deactivation date to the SECDEF.

2.21.8. Prepare message for TCCC to send to SECDEF requesting deactivation.

2.21.9. Following SECDEF approval for deactivation, prepare message for carriers notifying them of deactivation.

2.21.10. Routing of Traffic Documents. All traffic moved on CRAF aircraft will be documented, processed, and forwarded by AMC personnel in the same manner as traffic moved on AMC aircraft.

2.21.11. When military airfields are used by CRAF aircraft, services and equipment will be provided by the government as set forth in the AMC Airlift Services contract. Arrangements for required contractual coverage are contained in the AMC Airlift Services contract.

2.21.12. At civil airfields each carrier is responsible for servicing their own aircraft.

Chapter 3

CRAF OPERATIONS SUPPORT

3.1. Concept. CRAF missions entering the AOR will normally be contracted to arrive via an Intermediate Staging Base (ISB). ISBs could be established at an existing Air Force base or a commercial airfield as necessary. For planning purposes, airlift planners should route carriers through ISBs when support requirements necessitate their establishment. This support will utilize existing contracts and arrangements to the greatest extent possible.

3.2. ISB. An ISB is used to support CRAF operations where intelligence briefings, authentication material, as well as chemical warfare defense equipment issue and training or other services are necessary as part of the CRAF Enabling Concept. The selection will be based on locally available area facilities, the needs of CRAF and AMC, and in coordination with the MAWG-A and AOC Planning Directorates.

3.2.1. Augmenting ISB Personnel. ISB personnel may be civilians supplied by the activated CRAF airlines referred to as Civil Airlift Support Specialists (CASS).

3.2.2. DOD Personnel Augmenting the ISB. The CRAF OST Force module (8ECRF within the 088EF PID [Extended Force Module PID]) provides augmentees to support CRAF operations. The sizing of the augmenting team will be IAW **paragraph 4.4**. Once sized, sourcing of members is performed by their AF or MAJCOM-level functional area managers (FAMs) who select personnel by unit type codes (UTCs). Personnel may be drawn from anywhere in the AF or from a single MAJCOM. Support provided by these personnel may include, but is not limited to, C-CBRN familiarization, intelligence, weather, and mission briefings, to be coordinated through the CRAF Cell. Once personnel are selected, their names and details of their movement to the ISB will also be coordinated through the CRAF Cell. (See **paragraph 4.4.**. CRAF Enabling Concept)

3.3. CRAF Support Contract Provisions. All CRAF support services will be provided through provisions of an International Charter Airlift Services Contract modification issued by TCAQ. The contract makes provision for the activation of CRAF support services as required during a CRAF activation. TCAQ Administrative Contracting Officer (ACO) will issue any contract modification.

3.4. CRAF Enabling Concept. This concept is based on support for commercial aircraft prior to and after entering the AOR. If possible, prior to entering the AOR, a CRAF flight will stop at an ISB. The CRAF Enabling Concept will be executed as needed in the event of CRAF activation. This concept may also be implemented without CRAF activation in the event of heightened operations tempo and increased air carrier volunteerism. In theater, CRAF aircrews will normally receive support from military personnel at the FOL. The CRAF Enabling Concept will place a CRAF Operations Support Team at ISBs and a CASS at FOLs.

3.4.1. The decision to activate a CRAF ISB will be made by HQ AMC Director of Operations, Strategic Deterrence and Nuclear Integration (HQ AMC/A3/10). As the ISB personnel (see Operations Support Team, next paragraph) are deployed to support commercial carrier operations, the process of right-sizing the OST (pair and tailoring) will include inputs from the CRAF Cell, FAMs and the 618 AOC, and be approved by HQ AMC/A3/10. Per **paragraph 4.2**, the choice of ISB location will be coordinated through the 618 AOC.

3.4.2. CRAF Operations Support Team (OST). CRAF OSTs will serve as the point of contact for carriers unfamiliar with that airport's operations and/or unable to obtain services through normal company contracts. The CRAF OST serves as the 24-hour point of contact for airfield and aircrew issues unable to be resolved by normal lines of communication, as well as obtaining services and solving logistical problems beyond civil airlines control. Military manpower for the OST will be derived from the CRAF Enabling Concept Force module; this team will consist of up to 16 functional specialists, depending on requirements.

3.4.2.1. Integrated commercial operations at the ISB will be managed by a CRAF OST.

3.4.2.2. The CRAF OST will notify AMC/A3B and the CBS of additional military support requirements and/or equipment shortfalls as soon as possible after arrival at the ISB through mandatory daily SITREPS.

3.4.2.3. If practical, AMC/A3B will assess the feasibility of proposed CRAF ISB locations prior to deployment of the CRAF OST.

3.4.2.4. Due to possible ISB locations, CRAF OST personnel must be prepared to perform duties in civilian clothes. OST personnel must travel in accordance with the Foreign Clearance Guide (FCG).

3.4.2.5. The CRAF OST Commander will coordinate with an identified civilian airline liaison but will have full responsibility of all CRAF operations at the ISB.

3.4.2.6. The 618 AOC/ALD is responsible for flow control into/out of the AOR. Cancellations and/or mission changes must be coordinated through TCAQ and the 618 AOC/GADP. The CRAF OST may be asked to facilitate communication with a particular mission but holds no command-and-control authority.

3.4.2.7. Although the CRAF OST will be in place to support CRAF flights, commercial carriers will utilize existing contracts and arrangements for aircraft servicing and aircrew support to the maximum extent possible. They will also utilize civilian communications capabilities and infrastructure for mission reporting, changes, and planning.

3.4.2.8. CRAF aircrews will receive information through normal channels (carrier operation centers).

3.4.2.9. CRAF OST Composition and Duties. The CRAF OST is made up of the following personnel (final composition depends on the ISB location and in-place resources).

3.4.2.10. OST Commander/Liaison Officer. Oversees the establishment of an ISB and serves as liaison for civilian concerns to be aired directly with the responsible agency. Coordinates with the local U.S. Embassy for assistance with local issues and for intelligence information. Ensures that sufficient authentication material, if required, is on hand for issue to CRAF aircrews. However, Communications Security (COMSEC) material should be issued to CRAF aircrews upon departure from CONUS bases if needed. Will work with local contractors to procure cell phones for OST members; one cell phone will have overseas long-distance capability. The person filling this position should be a Field Grade Officer.

3.4.2.11. Command and Control. Ensures correct data is input into the Global Decision Support System (GDSS), Command and Control Information Processing System, or GDSS II.

3.4.2.12. Intelligence. Presents pre-mission briefings on AOR threat environment to CRAF crews and conducts post-mission debriefs either in person or via secure equipment. Will deploy with, at a minimum, a classified laptop for connection into a Secret Internet Protocol Router Network (SIPRNET) line, printer, and secure comms as directed by AMC/A3BC.

3.4.2.13. Civil Engineering Readiness & Emergency Management. Provides just-in-time CBRN Defense training to civilian aircrews IAW AMCPAM 10-260. Due to anticipated 1.5-hour ground time, training will likely take place on the aircraft and will focus on proper wear of IPE.

3.4.2.14. Supply (Mobility Bags). Manages, issues, receives, and maintains accountability for CRAF individual protective equipment (IPE). They will request additional IPE to ensure mission execution. Supply personnel will board transiting CRAF aircraft, obtain size information from the crew, and deliver the appropriately sized chemical warfare defense equipment to the aircrew. Mobility bag accountability will reside with supply functionals on the OST. Accountability will be maintained with hand receipts; special circumstances will be coordinated with CRAF carriers by AMC/A3B.

3.4.2.15. Communications Support. Provides support to include up to two personnel and required Non-Secure Internet Protocol Router Network (NIPRNET)/SIPRNET connectivity (i.e., satellite communications).

3.4.2.16. AMC/A3B will coordinate through TCAQ for the OST to purchase cell phones upon arrival at the ISB. AMC/A3B will also provide a minimum of two secure communication equipment, as needed.

3.4.2.17. OST Support Responsibilities. The CRAF OST may require support from the following organizations to accomplish its mission, if required:

3.4.3. **AMC/A3B will:**

3.4.3.1. Coordinate on the selection of ISBs with 618 AOC, AMC/A35 and air carriers. Locations will be based on suitability for aircraft, airfield security, airfield capacity, aircraft parking, aircraft servicing capability, billeting for civilian and military personnel, existing commercial air carrier contract vehicles, and ability to support other CRAF OST functions.

3.4.3.2. Identify the amount of IPE and coordinate/fund shipments to each ISB. CRAF chemical warfare defense equipment is currently stored by the 436 LRS, Dover AFB.

3.4.3.3. Work with the 618 AOC to attempt express routing of IPE to ISBs. As a standard, all CRAF flights into the AOR will be contracted to return through an ISB. For missions not contracted to return through the ISB, the aircrew will leave their IPE with the AEW/AEG LRS in the AOR. The IPE will then be shipped via the next available aircraft back to the ISB.

3.4.3.4. Coordinate with TCAQ to ensure all ISB enroute support services provided in connection with CRAF operations will be through provisions of a contract modification. A TCAQ contracting officer will issue all change orders. These change orders will include the following support for the OST: general office space, chemical warfare defense equipment storage, COMSEC storage, and additional telephone lines for secure telephone and secure fax communication, as well as logistics support for the aircraft.

3.4.3.5. Upon notification from AMC/A3B, 436 LRS, Dover AFB, will build specified number/sizes of C-Bags (chemical warfare ensembles), and prepare for shipment. The bags should depart Dover AFB via ground or air within 24 hours of notification. 436 LRS Supply personnel may be tasked to provide one lead Supply person per CRAF ISB.

3.4.4. **Technical Advisory Group (TAG).**

3.4.4.1. The request for TAG personnel will be at the discretion of AMC/A3B.

3.4.4.2. TAG Duties:

3.4.4.2.1. Assist with and coordinate civilian aircraft handling and crew management issues. Advise and coordinate for effective turn-around of civilian air assets.

3.4.4.2.2. Deploy, if possible, with carrier provided communication equipment. (For example, cell phone, laptop, etc.).

3.4.4.2.3. CRAF Carriers will provide a list of highly qualified TAG personnel to AMC/A3B upon receipt of an activation/warning order or as requested. Carriers will be compensated for costs associated with providing such personnel. TAG personnel must be U.S. citizens eligible for a SECRET clearance, fully skilled, and experienced in carrier communication systems and load planning operations.

3.4.4.2.4. TCAQ will ensure TAG personnel contract provisions are met IAW DODI 3020.41.

Chapter 4

FLIGHT OPERATIONS

Section 4A—Concept

4.1. CRAF Operations Authority.

4.1.1. CRAF Operations. CRAF operations will be conducted in accordance with procedures outlined in this instruction, the terms of the current AMC Airlift Services contract, and AFI 24-605 V2 Air Transportation Operations. Any situation or subject not covered herein will be resolved by the AMC CBS.

4.1.2. CRAF Carrier Flight Operations. Carrier flight operations will be conducted in accordance with all applicable FARs and carrier operating manuals.

4.2. Operations. For contingency planning, the airlift capability in support of missions during CRAF activation is based on a daily aircraft utilization rate of 10 domestic or 6,000 paid miles. Other requirements for contingency planning are listed below.

4.2.1. The long-range section of the International Segment satisfies JCS requirements that exceed the capability of AMC's organic long-range aircraft.

4.2.2. The short-range section of the International Segment satisfies medium-range offshore DOD airlift requirements.

4.2.3. The domestic section of the National Segment satisfies DOD airlift requirements to move personnel throughout the CONUS during CRAF activation.

4.3. Exemption from Seizure. JCS-approved Unified Command Plans exempt AMC transport aircraft engaged in the execution of approved war plans from seizure by theater commanders. CRAF strategic capable aircraft and crews will not be detained for use other than AMC's strategic airlift support of the theater commander.

4.4. Allocation of the Fleet. Aircraft are allocated to CRAF by DOT/OET under the authority of the Defense Production Act of 1950 as amended October 2009 (50 USC, App.2061, et. seq.). This allocation is based upon such factors as DOD-approved airlift requirements and suitability of civil aircraft.

4.5. Passenger Aircraft. Passenger aircraft will arrive at an onload site prepared to receive passengers/troops.

4.6. Cargo Aircraft. Cargo aircraft will arrive at onload site prepared to receive main deck cargo loaded on military 463L pallets. Lower lobes should be prepared for bulk loading.

Section 4B—Communications

4.7. In-flight Command and Control (C2) Procedures.

4.7.1. Mission progress reporting. CRAF aircrews will take actions to ensure that appropriate AMC C2 agencies receive timely updates on mission progress. This must be accomplished while on active AMC missions and when positioning for active AMC missions. C2 agencies are responsible for transmitting this information to other AMC agencies as required. If direct

contact with an AMC C2 agency is not possible, the aircrew should contact its carrier operations center or follow commercial SPINS instructions for relay or retransmission to the 618 AOC. (See PACE Plan in **Chapter 5**)

4.7.2. Information to be passed and time of reporting is as follows:

4.7.2.1. Arrival/departure messages. Within 30 minutes of arriving/departing a station, aircrews will pass their AMC mission number, aircraft number, actual time of arrival/departure, and estimated time of departure or arrival in GMT.

4.7.2.2. En route communications. Prior to passing over the geographical boundaries of a theater operation area, or as a minimum, 2 hours prior to landing, aircrews must contact the designated AMC C2 agency and pass their mission number, aircraft number, estimated time of arrival (ETA) for destination or alternate, and any significant maintenance problems.

4.7.2.3. Communication with destination station. Thirty minutes before arrival, aircrews must contact the destination AMC C2 agency for confirmation/revision of information.

4.7.3. The AMC C2 agency commander or senior AMC representative will assure CRAF aircrews receive:

4.7.3.1. The latest available communications information concerning the proposed route of flight.

4.7.3.2. Sufficient authentication materials (if required) to cover the next 72 hours.

Section 4C—Aircrew, Scheduling, and Mission Management

4.8. General. During CRAF activation, mission scheduling for international and domestic missions will be accomplished by the 618 AOC. Carriers will schedule aircrews and aircraft.

4.9. Deviation from Mission Schedule. Except for emergency or safety reasons, deviations from mission schedules must be coordinated with the Administrative Contracting Officer (ACO) and the 618 AOC.

4.10. Aircrew Scheduling and Staging Responsibility. Aircrew scheduling and staging will be done by the CRAF carrier.

4.11. Aircrew Complement. The air carrier aircrew composition is the decision of the carrier in accordance with carrier operating manuals and FAA regulations.

4.11.1. Both assignment of carrier or FAA/personnel as check airmen or instructors, as well as the movement of stage crews are authorized. However, additional crew members shall not reduce the ACL available to AMC without coordination with the 618 AOC and a CO approval.

4.11.2. Prior to boarding the aircraft, crewmembers must present proper written authority to the operations officer, dispatch center, or AMC representative.

4.12. Aircrew Notification.

4.12.1. CONUS. Crew notification will be accomplished by the CRAF carrier.

4.12.2. OCONUS. Crew notification may be accomplished by the carrier or by base operations/AMC C2 agency.

4.13. Aircraft Ground Time. For planning purposes, the ground times in **Table 4.1** may be used. Actual ground times are based on mission need. Some loads may require additional time and will be determined by the 618 AOC planners and carrier when mission is established.

Table 4.1. Mission Planning Ground Times.

Planning Ground Times (Cargo Aircraft)					
Aircraft Type	Originating	Terminating Stations	Enroute Stations	Turn-around Station	Exception L-100
Narrow-Body	2+00	2+00	2+00	2+30	1+00
Wide-Body	3+00	3+00	3+30	3+30	N/A
Notes: When a Wide-Body aircraft terminates an active mission and originates to another mission, ground time is 3+30 hours. When establishing schedules, TACC planners and commercial schedulers retain flexibility to determine actual ground times based on particular mission needs.					

Planning Ground Times (Passenger Aircraft)				
Contracted ACL	Originating	Terminating Missions	Enroute Missions	Turn-around Missions
250 or less	2+00	2+00	N/A	N/A
251 or more	3+00	3+00	N/A	N/A
170 or less (Small aircraft)	N/A	N/A	1+30	2+00
171 – 260 (Medium aircraft)	N/A	N/A	2+00	3+00
261 or more (Large aircraft)	N/A	N/A	3+00	3+00
Notes: When a Wide Body Aircraft terminates an active mission and originates to another mission, ground time is 3+30 hours. When establishing schedules, TACC planners and commercial schedulers retain flexibility to determine actual ground times based on particular mission needs.				

4.14. Overflight and Landing. DOD contract aircraft operate as "unscheduled civil aircraft" and do not qualify as state aircraft unless the aircraft is specifically designated as such by the US Government. Contractors must therefore obtain necessary overflight and landing clearances for their aircraft through the overflown and/or host nation’s clearance procedures for nonscheduled civil aircraft. The International Flight Information Manual (IFIM) and the Foreign Clearance

Guide outlines points of contact and responsibilities for obtaining overflight and landing from appropriate foreign civil aviation authorities. Under very limited circumstances, the 618 AOC/MODZ, may be involved in the foreign clearance process with DoD contract carriers. For questions or more information, contact the 618 AOC/MODZ, which will contact the DoD Executive Agent for the Foreign Clearance Program as necessary.

4.15. Call Signs. Contract carriers flying AMC missions may be authorized to use a special call sign that identifies their aircraft as a DOD contract aircraft. This special call sign may only be used by contract aircraft currently flying on mission segments as a condition of an overflight and/or landing clearance, as instructed by the 618 AOC/ALDRC.

Section 4D—Aircrew Restrictions

4.16. Flight Time Limitations. The flight time limitation for CRAF crewmembers is specified in the FAR and the carrier's aircraft operating manual, unless otherwise waived by the FAA. Carriers with union agreements should, where possible, have agreements that permit aircrew operations during CRAF activation up to the maximum limits specified by FAR and safe operating practices.

Section 4E—Air Carrier Dispatch Procedures

4.17. Aircraft Captain's Authority. Aircraft captains may:

4.17.1. Delay or discontinue flight for safety considerations.

4.17.2. Initiate a change in flight plan when, in Captain’ opinion, this change is necessary for reasons of safety.

4.17.3. If company operational policy permits, release the flight when operating in support of CRAF.

4.18. Alternate Airports.

4.18.1. Selection. When flight planning alternate airports for CRAF missions, CRAF carriers must consider the following:

4.18.1.1. For foreign offload destinations, plan as priority to use a U. S. military airfield or an airfield with U.S. military facilities. (618 AOC planners may provide preferred alternate airfields.)

4.18.1.2. Availability of billeting and messing facilities for passenger missions.

4.18.1.3. Overflight and landing clearance requirements, overflight agreements, and security considerations for missions carrying dangerous or special handling cargo.

4.18.1.4. Coordination. The nearest or most available AMC operations center/command post should be contacted before proceeding to an alternate.

Section 4F—Special Operating Procedures

4.19. Early Departure. CRAF aircraft are expected to depart and arrive on time. If aircraft loading/offloading operations are completed ahead of schedule, the 618 AOC must authorize early departure from any station.

4.20. Emergency and Survival Equipment. CRAF carriers are responsible for providing overwater, emergency, and survival equipment in compliance with the FAR.

4.21. Priority of Aircraft. During CRAF activation, military and civil transport aircraft flying in support of the contingency will receive the same priority.

4.22. Chemical, Biological, Radiological, and Nuclear C-CBRN) Defense Training. Due to the availability of CBRN weapons to terrorists and other potential adversaries, AMC will provide a CBRN training information (threat avoidance and personal protection measures) to each carrier for their use. AMC will store and distribute these ensembles and provide training, as required. The contractor will develop and incorporate CBRN/ GCWDE training for their aircrews and all other personnel that may accompany military missions into forward areas. This training will be based on AMC Pamphlet (PAM) 10-260, Civil Reserve Air Fleet (CRAF) Aircrew Chemical-Biological (CB) Warfare Defense Procedures. Contractor may obtain a copy of this reference material by contacting AMC/A3BC, (618) 229-1751. Deployed contractors will comply with AMCPAM 10-260 during contingency operations, CRAF activation or as directed by HQ AMC. During readiness visits, the contractor will present its training policy/program for review. Aircrew training may occur prior to or at CRAF activation. A log or other tracking tool shall be established for tracking trained personnel.

4.22.1. If AMC/A3BC directs issuance of GCWDE, aircrew members may receive hands-on training and GCWDE for their flight into/out of the AOR. Military personnel or contractors will brief the importance of receiving the appropriate GCWDE and additional training at CRAF Intermediate Staging Bases (ISBs) as identified by AMC/A3BC. These services will only be offered at locations designated by AMC/A3BC. All Government furnished GCWDE kits will be returned to CRAF ISBs or sent to locations designated by AMC/A3B immediately after exiting the AOR. Every effort will be made to divert arriving CRAF aircraft and if possible, launch aircraft on the ground to prevent contamination. Upon warning of impending CBRN attack (and it is impossible to launch civil aircraft), civilian crewmembers will don ground ensembles and take shelter, as directed by local authorities.

4.23. Contamination. CRAF aircraft may operate in trans-load operations at airfields in which contamination has been carried into the airfields by previously contaminated aircraft. The trans-load operation must include a method to avoid contamination of CRAF aircraft.

4.23.1. CRAF aircraft will not be used to transport equipment with residual contamination, due to safety and legal concerns. Further information regarding joint operations under CBRN threat conditions is available in JP 3-11, *Joint Doctrine for Operations in Nuclear, Biological, and Chemical (NBC) Environments*.

4.23.2. Should a CRAF aircraft become contaminated, it will be removed from the airflow until clearance decontamination can be accomplished. However, even if decontaminated to negligible levels, such assets will not be allowed to be used for flight. Lack of an internationally accepted standard for aircraft decontamination (i.e., cleanliness) means loss of any CBRN-contaminated aircraft; no country would likely permit such aircraft to enter its airspace. The second order effects of an aircraft loss (whether due to conventional or CBRN threats) would be reduced future participation in the CRAF program. Therefore, CRAF will not operate in a chemical biological contaminated environment.

Chapter 5

COMMUNICATIONS

Section 5A—Concept

5.1. General. This chapter establishes communication policies and procedures to be used during the activation of the CRAF.

5.2. Activation of CRAF. Activation of the CRAF will require unsecure/secure communication service between the AMC CBS and the carriers.

Section 5B—Operating Procedures

5.3. General.

5.3.1. Primary communication with AMC will be with the carrier operations division and carrier MOBREP, and the CRAF Cell.

5.3.1.1. Planning Issues: The CRAF Cell and the 618 AOC will coordinate with the CRAF carriers.

5.3.1.2. Operational Issues: The 618 AOC will coordinate mission taskings and operational issues with the carrier operations division and the CRAF Cell.

5.3.1.3. Policy Issues: Carrier MOBREPs will work with the CRAF Cell.

5.3.2. Aircraft Communications.

5.3.2.1. The carrier operations center is the primary conduit for communication with carrier aircraft. The carrier always maintains operational control but can request assistance from the 618 AOC, as needed. Aircrews can use DOD communication networks or air traffic control networks to pass or receive mission information through the 618 AOC if unable to contact their company as outlined in the commercial SPINS.

5.4. Communication Networks.

5.4.1. Unclassified/CUI Communications (No order of precedence)

5.4.1.1. Email

5.4.1.2. Telephone

5.4.1.3. Mattermost

5.4.1.4. Commercial Carrier Information File (CCIF)

5.4.2. Secure Communications. All CRAF carrier operations centers and ISB sites will be equipped with secure comms to receive or transmit material up to the SECRET level.

5.4.2.1. Voice over Internet Protocol (vIPer) Phone

5.4.2.2. Secure Fax

5.4.2.3. Secure Tablet (Provisional)

5.5. Commercial Special Instructions (SPINs).

5.5.1. AMC/A3B will provide Commercial SPINS electronically to carriers and crews along with mission information. The SPINs are applicable to all commercial airlift operations in support of the 618 AOC under contract to USTRANSCOM (TCAQ) during CRAF activation.

5.5.2. Commercial aircraft and crews remain under company control, not directly under the 618 AOC. The SPINs provide additional information to civilian crews that are unique to CRAF operations during activation.

5.5.3. Commercial carriers under contract by USTRANSCOM/AMC are not bound by Military Classified SPINS for AFTRANS Operations but only by contract provisions. This document provides additional information for CRAF carrier operations and dispatch centers as well as aircrew. Applicable information will be communicated in this document or directly to the commercial carrier mobility representative.

5.6. Primary, Alternate, Contingency, Emergency (PACE). During CRAF activation, commercial crews will follow their normal Primary and Alternate communication methods and procedures. Since interference is possible through jamming, spoofing or cyber-attack, carriers should review the following table for alternate, contingency, and emergency communication options. This table is a quick reference based on feedback from current CRAF carriers and is not all encompassing. New equipment may provide other avenues of communication.

Figure 5.1. CRAF Carriers.

Agencies	Phase	Primary	Alternate	Contingency	Emergency
AOC - Carrier Ops	All	Mattermost, Email, Phone	Mattermost, Email, Phone, Fax	Mattermost, Email, Cell Phone, Fax, HF, Message	Mattermost, Email, Phone, Fax, Cell Phone, HF, Message
Carrier Ops - Crew	Ground	ACARS, EFB (Wi-fi, Cell Signal)	Fax, Cell Phone, SAT Phone	ACARS, EFB, Fax, Cell Phone, SAT Phone	ACARS, EFB, Fax, Cell Phone, SAT Phone
	Inflight	ACARS (SAT, HF VHF), EFB / FMC Messaging	HF, SAT Phone, EFB / FMC Messaging	ACARS, HF, SAT Phone, EFB Messaging	ACARS, HF, SAT Phone, EFB Messaging
ATC - Crew	Ground	ACARS / CPDLC (VHF)	VHF	ACARS, VHF, Verbal, Light Signals	ACARS, VHF, Verbal, Light Signals
	Inflight	ACARS (SAT, HF, VHF) CPDLC (SAT, VHF)	HF (SELCAL), VHF	ACARS, HF, VHF	ACARS, HF, VHF
	Navigation	GPS, INS, NAVAIDS	INS, NAVAIDS (Airspace Restrictions)	GPS, INS, NAVAIDS (Airspace Restrictions)	GPS, INS, NAVAIDS (Airspace Restrictions)
AOC - Crew	Ground	N/A	N/A	Runners, Inmarsat/Iridium Voice, HF Phone Patch	Runners, Inmarsat/Iridium Voice, HF Phone Patch
	Inflight	N/A	N/A	Inmarsat/Iridium Voice, HF Phone Patch, Pass to Hilda	Inmarsat/Iridium Voice, HF Phone Patch, Pass to Hilda

Chapter 6

WAIVERS AND EXEMPTIONS

6.1. General. Certain FAR sections allow the administrator to issue a Certificate of Waiver, a Certificate of Authorization, or operations specifications that authorize a deviation. These actions permit a person or organization to either deviate from a specific regulation or comply with special alternative provisions, conditions, or limitations. This regulatory flexibility is available to the Administrator when the specific regulatory section stipulates that it is available. When a regulatory section stipulates that a deviation is permitted, any person or organization may apply for a deviation. Deviations may be granted and issued to operators conducting operations under FAR Parts 121, 129, or 135. To apply for a deviation, an operator must submit a specific request to the FAA. The application must generally be made by a letter that identifies the specific regulatory guidance from which a deviation is requested.

6.1.1. Deviations for Military Contract Operations.

6.1.1.1. The transportation of government-financed persons and property must be provided by air carrier certificate holders (CH) authorized to operate under part **121** or **135**. However, 14 CFR part 119, § 119.55 permits the Administrator to authorize deviations from the applicable requirements of part **117**, **119**, **121**, or **135**, when necessary, so that CH may perform certain unique civil aircraft operations under a military contract. These requests for deviation (application to amend OpSpecs), including the Department of Defense's (DOD) written certifications required by § 119.55(c)(1) and (2), must be submitted to the manager of the Air Transportation Division (AFS-200) or Aircraft Maintenance Division (AFS-300), as appropriate. If the manager of AFS-200 or AFS-300 concurs to grant a deviation from applicable regulations, the applicable division staff will provide suggested language for inclusion in the OpSpecs to be issued to the CH by its responsible Flight Standards office. A CH conducting part **121** or **135** operations who has DOD contract obligations to conduct civil aircraft operations must arrange for AMC to submit an application for deviation (application to amend the OpSpecs) on its behalf. The CH's requests for deviation must be submitted to the following email address with an information copy to their respective responsible Flight Standards offices: Email: AMC.AMC/**A310B.DOD.COMMERCIAL.AIRLIFT.DIVISION@us.af.mil**.
Telephone: 618-229-4801

6.1.1.2. If AMC elects to request such relief, it will apply on behalf of all affected operators, directly to the manager of the Air Transportation Division, AFS-200. AFS-200 will in turn provide a copy of each operator's certificate-holding district office (CHDO). CHDO shall immediately advise its regional office that AMC, on behalf of the operator, has forwarded an application (for a deviation and amended operations specifications) to AFS-200. The CHDO shall analyze the request as soon as possible and forward its recommendation through the regional office by the most expeditious means available. These deviations are not applicable until FAA has issued formal approval.

6.1.1.3. If AMC/A3B elects to request such relief on behalf of its contract carriers, it will submit an application in accordance with § 119.55 directly to the AFS-200 or AFS-300 managers on behalf of all affected CHs. If applicable, AFS-200 will provide a copy of the application to AFS-300 for appropriate action and vice versa. If the manager of AFS-200

or AFS-300 concurs with AMC's recommendation for deviation(s) from applicable regulations on behalf of its contract carriers, the applicable division staff will provide suggested language for inclusion in the OpSpec(s) to be issued to each CH by its responsible Flight Standards office. The amendment must contain an expiration date consistent with the duration of the specific military operation. The CH must be advised, however, that the Administrator may terminate the grant of deviation authority and amend the OpSpecs removing the deviation authority at any time.

6.1.1.4. **NOTE:** Article 3 of the Chicago Convention provides that it only applies to civil aircraft operations and not to State aircraft operations. An aircraft that qualifies as a public aircraft when operating within the territory of the United States does not necessarily qualify as a State aircraft when operating outside the United States.

6.1.1.5. Designation as a State aircraft requires action by the U.S. Department of State (DOS). Therefore, operations as a public aircraft for the U.S. military may only be conducted within the territory of the United States. For international operations, the DOD may, in its sole discretion, arrange with the DOS for certain operations to be designated as State aircraft operations. Such a designation requires the DOS to obtain diplomatic clearances from the various foreign countries where the operations will occur and issue special regulations for the conduct of those operations internationally. In most situations, the DOD will consider seeking a designation as a State aircraft for one of its contract operations to be neither practical nor desirable.

6.1.1.6. When the nature of a crisis does not permit adequate time to obtain deviations in accordance with the above guidance, AMC may obtain immediate relief on behalf of all affected operators, from specific FAR Part 121 requirements via direct communications with AFS-200. CH DOs will be notified of this relief as soon as possible.

Section 6A—DOT Exemptions

6.2. Transportation of Explosives and Other Dangerous Articles. The DOD has been exempted from the provisions of Title 49 CFR, Subpart B of **Part 107**, Parts **172** and **175**, to the extent necessary to permit the transportation of hazardous materials via DOD contract airlift, under DOT Special Permits 7573 and 9232. Permits may be found at the following website: **https://www.phmsa.dot.gov/approvals-and-permits/hazmat/special-permits-list**. Hazardous materials authorized by these permits are limited to materials authorized to be transported by motor vehicle in conformance with 49 CFR Parts 107 and 171 thru 179. Hazardous material must be prepared/packed according to the requirements in AFMAN 24-604 (I), Preparation of Hazardous Materials for Military Air Shipments.

6.2.1. DOT Special Permit 7573. This special permit applies only to transportation in air commerce of explosives and other hazardous materials deemed essential to national defense via DOD contract airlift services and civil air operators under contract to the Air Mobility Command (AMC). The aircraft to be used must be those contract airlift services and civil air operators under contract to AMC. DOD must maintain on file with the Office of Hazardous Materials Safety Approvals and Permits Division (OHMSAPD), an up-to-date list naming each carrier used under this special permit.

6.2.2. DOT Exemption 9232. This exemption applies to cargo and passenger-carrying aircraft for emergency movements during a declared National Emergency, or during contingencies and expedited movement of US forces as approved by the SECDEF and directed by TCCC.

6.2.3. Common requirements that apply to DOT Special Permits 7573 and 9232

6.2.3.1. DOD or contract carrier must have advance permission from the owner or operator of each manned airport where the material is to be loaded or unloaded and where the aircraft is to land while the material is on board.

6.2.3.2. Loading and storage of hazardous materials aboard the aircraft must be in accordance with AFMAN 24-604. Loading and unloading operations shall be monitored by a qualified DOD representative or a technician qualified in accordance with 14 CFR, 121.433a or AFMAN 24-604.

6.2.3.3. During loading or unloading, no person may smoke or operate any device capable of causing an open flame within 50 feet of the aircraft.

6.2.3.4. Unless emergency conditions prescribe otherwise, loading and unloading of the aircraft shall be conducted at a safe distance from heavily populated areas and any place of human abode. However, if an airport has a designated area for loading and unloading, explosives will be loaded and unloaded in this area. No fueling operations of the aircraft may be conducted during the loading and unloading of explosives.

6.2.3.5. Shipping papers identifying all hazardous materials are required.

6.2.3.6. Operation of the aircraft during take-off, en route, and landing must be conducted at a safe distance from heavily populated areas.

6.2.3.6.1. Before movement of the aircraft, the pilot shall notify the control tower of the class(es) of explosives on board.

6.2.3.6.2. Prior to entering an airport traffic area, the pilot shall notify the control tower of the class(es) of explosives on board and request this information be relayed to the appropriate officials.

6.2.3.6.3. When under radar control during the approach and landing phase, the pilot shall request appropriate vectors so as to avoid heavily populated areas.

6.2.3.7. A copy of this exemption must be carried aboard each aircraft operating under these exemptions.

6.2.3.8. Any incident involving loss of contents of the packages must be reported to the Office of Hazardous Materials Regulation as soon as practicable.

6.2.3.9. Prior to takeoff, all crew members will be instructed in proper procedures to be followed during an emergency involving hazardous material.

6.2.3.10. When destination is changed after departure because of weather or other unforeseen circumstances, permission from the owner or operator of the alternate airport shall be obtained as soon as practicable.

6.2.3.11. These permits do not grant authority to use foreign controlled airspace or airports outside the US.

Chapter 7

SECURITY

Section 7A—General

7.1. Security Requirements for CRAF. This chapter is a consolidation of security requirements applicable to CRAF.

7.2. Directives.

7.2.1. Air Force Instructions in the 31-series (Security) and the DOD Industrial Security Regulations (specifically DODM 5200.01DAFI 16-1401and 32 CFR Part 117).

7.2.2. The DOD National Industrial Security Program Operating Manual (NISPOM) for Safeguarding Classified 32 CFR Part 117, or superseded by subsequent publications, established requirements for safeguarding of classified information by DOD contractors, subcontractors, vendors, or suppliers. Federal Statutes and Executive Orders as set forth in the DOD NISPOM are also applicable.

Section 7B—CRAF Security

7.3. Requirements.

7.3.1. Facility Security Clearance. A facility clearance of SECRET and classified safeguarding capability is required in accordance with 32 CFR Part 117, where there is a need for receiving and storage of classified documents and equipment supporting the CRAF program.

7.3.2. Personnel Security Clearance. An employee may be processed for a personal clearance (PCL) when the contractor determines that access is essential in the performance of tasks or services related to the fulfillment of the awarded contract. The contractor shall limit requests for PCLs to a minimal number of employees necessary for operational efficiency, consistent with contractual obligations and other requirements of the NISPOM. Periodic reinvestigations associated with the security clearances will be submitted to PSMO-I within the required DoD timelines.

7.3.3. Non-aircrew Security Clearances. Personnel designated by the carrier to perform duties specified as follows must possess a clearance to the classification level of SECRET.

7.3.3.1. Carrier personnel involved with overall CRAF planning.

7.3.3.2. Carrier personnel assigned for liaison duty at either HQ AMC or its alternate.

7.3.3.3. Mobilization Representative (MOBREP)/Technical Advisory Group (TAG) attendees.

7.3.3.4. Sufficient flight operations dispatchers to manage CRAF missions.

7.3.4. Aircrew Security Clearances. Carriers are not required to maintain active security clearances for CRAF flight deck crewmembers during peacetime. At the time of activation, SECDEF has the emergency authority to grant aircrews' access to classified information if

required. This approval would be coordinated within the CRAF activation request memo coordinated between the SECDEF and TCCC.

7.4. Procedures.

7.4.1. Facility Security Clearance. Prior to contract award, the contractor will be processed for a facility clearance (FCL) at the appropriate level and must meet eligibility requirements for access and safeguarding of classified information and equipment. The contractor will not be afforded access to classified information until the FCL (interim or active) has been granted by the Defense Security Service (DSS). FCL sponsor packages will be processed by AMC/A3BC via the National Industrial Security System.

7.4.2. Safeguarding Classified Information. Administrative procedures will be developed in accordance with directives referenced in **paragraph 8.2** of this instruction to ensure a maximum degree of safeguarding for classified information. This will be accomplished in accordance with the carrier's approved Standard Practice Procedure for Handling of Classified Documents.

Section 7C—Responsibilities

7.5. CRAF Responsibilities.

7.5.1. Individual CRAF Personnel and Facility Security Officer. Responsibility for security of classified information and material rests with each individual authorized access. To ensure all carrier personnel handling classified material are familiar with requirements for safeguarding of this material, the company security officer must conduct initial and annual refresher training as prescribed by the NISPOM paragraph 117.12k. The CRAF carrier must establish appropriate safeguards to assure that the individuals who are not cleared, do not gain access to classified information.

7.5.2. Military Base Commander. CRAF aircraft at military installations will receive the same degree of physical security as provided military aircraft in like status. Ingress and egress procedures to and through control points and restricted or controlled areas will be established to permit CRAF crews access to their aircraft and bases.

7.6. Authority for Access to Classified Documents.

7.6.1. Authority to Handle Authenticator Material. During CRAF activation, flight deck aircrew members may require certain authentication systems in order to perform CRAF missions. When needed, these documents may be made available at military airfields to flight deck aircrew members providing they have been granted access to classified information by the SECDEF.

7.6.2. Authority for Access to Safe Passage Procedures. NORAD Regulations 55-67 (S) and 55-68 (S), provide the safe passage procedures for CRAF aircraft departing from and returning to the CONUS. Upon activation of CRAF, flightdeck aircrew members, having been granted access to classified information by the SECDEF, are authorized access to the NORAD Safe Passage Procedures when Stage III of CRAF is activated.

7.7. Classified Guidance.

7.7.1. Providing Security Classification Guidance:

7.7.1.1. TCAQ will incorporate the classified guidance in this instruction into the AMC Airlift Services contract as part of Appendix 5.

7.7.1.2. AMC/A3BC will provide CRAF classification guidance to TCAQ through submission of a DD Form 254, DOD Contract Security Classification Specification. This form will be made a part of the AMC Airlift Services contract.

7.7.1.3. AMC/A3BC will also provide to TCAQ, upon request, classification guidance to support the DD Form 254 submission for peacetime DOD airlift operations.

7.7.1.4. AMC/A3BC in conjunction with USTC/J3-FP will coordinate all security items, including the DD Form 254, prior to submission to TCAQ.

7.7.2. Reviewing Security Classification Guidance. AMC/A3BC in conjunction with USTC/J3-FP will review the security classification guidance, contained in the DD Form 254, prior to the next contract period and notify TCAQ of the results of that review. When there is a change in the security classification guidance, TCAQ will inform the contractor. The cognizant security office shall be furnished a copy of all notification or reclassification action.

7.8. Personnel Security Clearance Authorization.

7.8.1. General. Authority for carriers to certify the personnel security clearance status of company employees is contained in the NISPOM, DOD 5220.22M. This reference makes provisions for the carrier who has a valid facility security clearance of SECRET to verify the security clearance status of its employees.

7.8.2. Security Clearance Identification. This AMC Instruction is the basis for satisfying the peacetime and wartime security clearance requirements. Contract airlift flight deck aircrew personnel, who possess an active security clearance, may be required to provide protective and signature security services in support of peacetime airlift requirements. During CRAF activation, flight deck aircrew personnel may be required to provide protective and signature security services in support of wartime airlift requirements. A valid passport or company ID card, either of which has a picture of the bearer, will provide sufficient identification for releasing SECRET material to cleared CRAF personnel.

7.8.3. Security Clearance Confirmation. If validity of the clearance status or the identity of the bearer is questioned, confirmation may be obtained by contacting the appropriate CRAF carrier's company security officer.

7.8.4. Facility (company) Security Officer's (FSO) Responsibility. The FSO will maintain a current list of company personnel with U.S. Secret clearances and cockpit aircrew personnel who may be granted access to classified information or equipment. These lists will be verified during on-site readiness visits by members of the DOD Commercial Airlift Division.

7.8.5. Military Base Commanders. All CRAF carrier personnel, after proper clearance verification or confirmation and after proper identification by means of a valid passport or company ID card, any of which has a picture of the bearer, are authorized to have access and receive classified material as necessary to support the DOD airlift mission. Additionally, everyone (excluding aircrew members transiting the installation) who is listed with the FSO and Defense Investigative Security Clearance Office and has been the subject of at least a National Agency Check may be issued a restricted area badge in accordance with AFI 31-501, Personnel Security Program Management, Chapter 3.

7.9. Authentication Materials. Authentication materials and IFF/SIF OIs will be made available to CRAF cockpit aircrew members at military airfield operations and ISBs (as necessary). Initial issue of these documents will be "as required" to cover elapsed time from departure station to destination and return, or to the first en route station with the capability to provide additional distribution.

7.10. Classified/Unclassified Operations Briefing. An operations briefing, including security, communications, and intelligence will be the responsibility of AMC.

7.11. Handling of Classified Material. In addition to the briefing outlined in **paragraph 7.10** above, the briefing officer will ensure the aircraft captain, or first officer is aware of the following:

7.11.1. Receipt for Classified Material. The contents of the briefing envelope contain information affecting the national defense of the United States and is issued for use while flying. Part of this information is classified, and extreme care should be exercised to preclude its being compromised. Upon terminating the flight, all material will be given to the military airfield operations officer or destroyed in accordance with **paragraph 7.11.2** below. All classified material will be accounted for by means of the AF Form 310, *Document Receipt and Destruction Certificate*, or a comparable hand receipt. Prior to accepting material, the aircraft captain should ensure that sufficient legible copies of the receipt form are available to allow one copy for the recipient at the destination and one copy for the aircraft captain's personal file.

7.11.2. Destruction of Classified Material. In the event of an emergency where it appears that classified material cannot be protected, it will be burned or destroyed by other means, to render recognition impossible. In this event, complete the destruction certificate on the SF 153 or AF Form 310. Provide a copy of this form to the issuing office and retain one copy to be held for the required 2 years.

Chapter 8

CRAF EXERCISE PROGRAM

8.1. Purpose. The CRAF Exercise Program ensures the readiness of HQ AMC and USTRANSCOM staff to competently activate and deactivate the CRAF. As stated in AFI 10-204 Air Force Service Exercise Program and Support to Joint and National Exercise Program, exercises —enhance readiness, boost combat capability, streamline procedures, and identify weaknesses. A regular cycle of planning, exercising, and reviewing lessons learned will keep AMC prepared for meeting wartime and contingency commitments.

8.2. Organization. For the purposes of this instruction, there are two types of CRAF exercises: AMC CBS exercises and AMC/A3BC CRAF Readiness Assessments.

8.2.1. AMC Exercises. As part of larger exercises involving HQ AMC, the CRAF office will routinely receive exercise injects involving CRAF questions or issues. Occasionally, these exercises will include CRAF activation and AMC/A3BC and other staff functions (TCAQ, 618 AOC, and TCJ5/4) are tasked to perform in a well-coordinated and timely fashion.

8.2.2. AMC/A3B will conduct readiness visits on a 24-month cycle (approximately). The contractor shall provide an agenda detailing the day's activities to AMC/A3B personnel listing specific responsibilities by each office being evaluated. The Readiness assessment will include programs established by the carrier i.e., chemical/biological warfare suit training, handling classified material, and the storage, maintenance and operation of government furnished equipment. The assessment team will also evaluate the planning and command and control functions leading up to the execution of CRAF missions during a simulated activation scenario commensurate to the carrier's commitment to a particular segment. Areas of interest mandated by the current Commercial Charter Airlift Services Contract and the National Industrial Security Program Operating Manual will also be subject to evaluation. The evaluation checklist will be made available to the contractor no later than 30 days prior to the visit for planning purposes.

8.2.2.1. Readiness visits may also include PACE exercises on active DOD missions. All information to include Commercial Spins will be passed to the MOBREP in the same fashion as traditional readiness exercises.

8.2.2.2. Recommended format and topics. A tabletop format is conducive to learning and facilitates both discussion and questions from participants. Topics for discussion should always include any lessons learned from previous assessments. Review of such lessons learned can spur process improvements and help avoid likely pitfalls in upcoming assessments. Additional topics include activation procedures or any other issues likely to arise during the assessments (communication channels, message handling, etc.)

DEREK M. SALMI, Brigadier General, USAF
Director, Operations, Strategic Deterrence, &
Nuclear Integration (HQ AMC)

Attachment 2

NAVIGATION ROUTE KIT

A2.1. Overview. This attachment provides information needed for receipt and management of the CRAF navigation route kit (NRK).

A2.2. NRK. An NRK, which is made up of DOD Flight Information Publications (FLIP) (navigation maps and charts, terminal information, en route publications, etc.), provides navigation coverage for specific CRAF Segments, is necessary for operating DOD missions, and may be used during CRAF activation. An air carrier operating in any segment of CRAF is authorized to receive an NRK provided by the Government. FLIP, which are produced by the National Geospatial-Intelligence Agency (NGA) and distributed by the Defense Logistics Agency (DLA), provide appropriate area coverage as follows:

A2.2.1. International Segment (long- and short-range) - Global.

A2.2.2. National Segment - Continental United States, Alaska, and North Warning System. Note: Military navigation aids required during peacetime are also required during CRAF activation.

A2.3. FLIP requirements and distribution.

A2.3.1. AMC/A310B is responsible for establishing the FLIP/Kits requirement (type and quantity) for each CRAF carrier. The type of FLIP is based on the segment(s) of CRAF the carrier is in. The number of kits a carrier is authorized is based on the number of aircraft the carrier has in CRAF plus one kit for use in the carrier’s flight operations dispatch area. The FLIP-DVD, NSN: 7644015335389, is a suitable substitute for paper products and is considered one kit. Also, the NGA portal or the Aeronautical Source Packaging Service may be used as a suitable substitute for FLIP paper products.

A2.3.2. The minimum number of kits the carrier must maintain is two (one for an aircraft and one for flight operations dispatch). The maximum number of kits a carrier is authorized to receive will not be more than the number of aircraft they have in CRAF and the one for flight operations.

A2.3.3. The carrier may contact the FLIP account custodian within AMC/A3BC to request replacement, missing products or to adjust the number of kits they are receiving.

A2.4. FLIP (NRKS). FLIP (NRKs) that are placed aboard aircraft must be maintained in heavy-duty type bags or cases, which are procured through local sources at the carrier's expense. The FLIPS may also be loaded on company provided and approved electronic flight bags if desired, eliminating the need of paper copies.

A2.5. The CRAF carrier will maintain all NRKs provided by the Government in a current status. Upon receipt of FLIP, to include changes, outdated FLIP will be removed and discarded.

A2.6. CRAF Carriers. CRAF carriers are authorized to use the FLIP during peacetime commercial or military contract operations; however, they must still be maintained in a ready status at all times for the appropriate area coverage to support CRAF activation.

A2.7. Carrier Responsibilities.

A2.7.1. Periodically review FLIP requirements and advise AMC/A3B of necessary changes.

A2.8. DLA Responsibilities. DLA/DSCR-JNAB is responsible for forwarding FLIP to appropriate CRAF carrier addresses.

A2.9. AMC Responsibilities.

A2.9.1. HQ CCC/CZMR will publish AMCI 10-402 on e-Publishing (e-publishing.af.mil) making it available publicly.

A2.9.2. AMC/A3B will:

A2.9.2.1. Conduct an annual survey of CRAF carriers FLIP and chart requirements and current mailing address.

A2.10. International Segments requirements. The NRK for the International (long- and short-range) Segments will contain one copy of all FLIP for worldwide coverage and the Foreign Clearance Guide, which can be obtained via the worldwide web at **http://www.fcg.pentagon.mil**.

A2.11. National Segment, Domestic Section. The NRK for the Domestic Section of the National Segment will contain one copy of all FLIP covering CONUS, Canada, and Mexico.

Civil Reserve Air Fleet (CRAF) Activation Warning Message	

SUMMARY Attachments

1. The purpose of this SSS is to provide air carriers with the activation warning message alerting them of the potential CRAF activation.

2. It is possible that the activation of one or more stages of CRAF may be required in the near future. The message at Tab 1 requests AMC/CV approval of the activation warning message.

3. RECOMMENDATION: AMC/CV approve and AMC/A3/10 sign activation warning message at Tab 1.

//SIGNED//

THIS MESSAGE IS APPROVED FOR RELEASE BY AMC/CC, DSN 779-3205.

SUBJECT: POTENTIAL CIVIL RESERVE AIR FLEET (CRAF) ACTIVATION.

NOTE: THIS MESSAGE WILL BE TRANSMITTED TO EFFECTED CRAF AIR CARRIERS.

1. IT IS POSSIBLE THAT ACTIVATION OF ONE OR MORE STAGES OF CRAF MAY BE REQUIRED IN THE NEAR FUTURE. SHOULD THIS OCCUR, QUESTIONS CONCERNING CRAF MISSION SCHEDULING, ITINERARY COORDINATION, CRAF ENROUTE SUPPORT FUNCTIONS, CAPABILITY REPORTING, ETC., FOR THE INTERNATIONAL SEGMENT, LONG RANGE SECTION WILL BE DIRECTED TO HQ AMC/A3BC VIA E-MAIL AT AMC.AMC/A310BC.CIVIL.RESERVE.AIR.FLEET.BRANCH@US.AF.MIL OR TELEPHONE AT 618-229-1751 WITH A FACSIMILE MACHINE BACKUP AT 618-256-6088.

2. CARRIER SHALL ESTABLISH A 24-HOUR PER DAY OPERATIONS AND CONTROL CENTER (OCC) MANNED BY QUALIFIED PERSONNEL AND LOCATED AT THE CARRIER'S DESIGNATED OCC LOCATION.

3. PLEASE ACKNOWLEDGE RECEIPT OF THIS MESSAGE TO HQ AMC/A3BC VIA EMAIL, FAX OR VOICE, 618-256-6088 (FAX) OR 618-229-1751 (VOICE).

SUBJECT	DATE
Request to Activate Civil Reserve Air Fleet (CRAF) Stage I	

SUMMARY Attachments

1. The purpose of this SSS is to provide the TCCC with the message requesting CRAF activation and authority to grant access to classified material from the Secretary of Defense (SECDEF).

2. Requirements for movement of troops and cargo in support of OPERATION TERMINAL FURY have increased to the point where present level of volunteer commercial augmentation has been exhausted. Activation of CRAF Stage I is required to meet the current and projected needs. The message at Tab 1 request SECDEF approval of activation of CRAF Stage I and the authority to grant access to classified information or equipment (including COMSEC) to flight deck crew members assigned to CRAF missions.

3. RECOMMENDATION: AMC/CC approve message and forward to TCCC for signature and transmittal to SECDEF.

//SIGNED//
DARREN V. JAMES, Brig Gen, USAF
Director of Operations, Strategic Deterrence, and Nuclear Integration

SUBJECT: REQUEST TO ACTIVATE CRAF (IF REQUIRED, AUTHORIZATION UP TO AND INCLUDING STAGE II)

CONSIDERING THE CURRENT CONDITION CONCERNING OPERATION TERMINAL FURY, REQUEST YOUR APPROVAL FOR ACTIVATION OF CRAF. THIS REQUEST WILL INCLUDE AUTHORIZATION UP TO AND INCLUDING STAGE II, IF REQUIRED.

ONCE ACTIVATED, THE GOVERNMENT MAY EXERCISE ITS OPTION TO INCREASE THE SERVICES TO BE PERFORMED UNDER THE AMC AIRLIFT SERVICES CONTRACT TO THE FULL CAPACITY OF THE AIRCRAFT UNDER CONTRACT.

THE COMMANDER, USTRANSCOM, REQUESTS SECDEF GRANT CRAF AIRCREWS TEMPORARY ACCESS TO CLASSIFIED INFORMATION FOR MISSIONS FLOWN IN SUPPORT OF THE CURRENT NATIONAL DEFENSE EMERGENCY. THIS AUTHORIZATION IS TO REMAIN IN EFFECT FOR THE DURATION OF THE CRAF ACTIVATION PERIOD AND PERTAINS TO INFORMATION REQUIRED BY THE SPECIFIC AIRCREW MEMBERS TO FLY THE MISSION ASSIGNED BY THE DOD. THIS APPROVAL WILL BE AUTOMATICALLY RESCINDED UPON DEACTIVATION OF THE CRAF.

ALL ADDRESSEES PLEASE ACKNOWLEDGE RECEIPT OF THIS MESSAGE.

SUBJECT: ACTIVATION CIVIL RESERVE AIR FLEET (CRAF) STAGE I

NOTE: THIS E-MAIL/FAX IS ALSO BEING TRANSMITTED TO ALL ACTIVATED AIR CARRIERS.

1. CONSIDERING THE CURRENT CONDITIONS IN THE PACOM THEATER, THE COMMANDER, USTRANSPORTATION COMMAND, HAS DIRECTED THE COMMANDER, AIR MOBILITY COMMAND TO ACTIVATE CRAF STAGE I, INTERNATIONAL SEGMENT, LONG AND SHORT-RANGE PASSENGER AND CARGO SECTIONS AS REQUIRED TO SUPPORT OPERATION TERMINAL FURY.

2. NOTICE IS HEREBY GIVEN THAT CRAF STAGE I, INTERNATIONAL SEGMENT, LONG RANGE PASSENGER AND CARGO SECTIONS ARE ACTIVATED, EFFECTIVE (D/TG), AND THAT THE GOVERNMENT MAY EXERCISE ITS OPTION TO INCREASE THE SERVICES TO BE PERFORMED UNDER THE AMC AIRLIFT SERVICES CONTRACT TO THE FULL CAPACITY OF THE AIRCRAFT UNDER CONTRACT FOR STAGE I. EACH AIRCRAFT SELECTED FOR ACTIVATION WILL RECEIVE WAR RISK INSURANCE FOR THE FOLLOWING AREAS OF RESPONSIBILITY; EUCOM, CENTCOM, AND PACOM. WAR RISK INSURANCE IS ALREADY IN PLACE FOR A WEAPONS OF MASS DESTRUCTION DECLARED LOSS GLOBALLY.

SEE ATTACHMENT 1 FOR CRAF STAGE I ACTIVATED AIRCRAFT LISTING

4. IN ACCORDANE WITH THE AIRLIFT SERVICES CONTRACT IN SUPPORT OF CRAF CARRIERS MUST PROVIDE AIRCRAFT FROM THE ASSIGNED FLEET, IF AIRCRAFT IS UNAVAILABLE AN AIRCRAFT OF EQUAL TO OR GREATER THAN CAPABILITY AS DETERMINED BY

PERFORMANCE DATA WILL BE SUBSTITUTED TO AMC/A3B AND USTRANSCOM AQ IS REQUIRED FOR ALL AIRCRAFT SUBSTITUTIONS TO ENSURE AIRCRAFT PERFORMANCE

CAPABILITIES MEET MINIMUM REQUIREMENTS. ALL CARRIERS ARE REQUIRED TO TAKE NECESSARY ACTION TO PREPARE AND POSITION STAGE I ACTIVATED AIRCRAFT AND CREWS AT DESIGNATED ONLOAD LOCATIONS BY (D/TG). STAGE I ACTION RESPONSE TIME IS 24 HOURS FROM ACTIVATION NOTIFICATION.

5. ALL AIR CARRIERS MUST PROCESS AIRCRAFT THROUGH DESIGNATED INTERMEDIATE STAGING BASES (IF REQUIRED) TO RECEIVE GROUND CREW PERSONAL PROTECTIVE EQUIPMENT AND REFRESHER TRAINING.

6. PLEASE ACKNOWLEDGE RECEIPT OF THIS MESSAGE TO HQ AMC//A3BC VIA FAX OR VOICE, 618-256-6088 (FAX) OR 618-229-1751 (Voice).

Crisis Initiation

_____WARNORD/EXORD released from CJCS directing support to Combatant Commander requests for transportation/forces/materiel. (CJCS)

_____USTRANSCOM/J3 (JOC) hosts Joint Planning Team (JPT) to assess airlift requirement in conjunction with AMC/A3 & 618 AOC. Conduct TPFDD Force Flow Analysis, TPFDD LOI and assess changes as required. (OPR: TCJ3, OCR: AMC/A3)

_____JPT Review OPLAN apportioned forces and assess existing capacity options. JPT lead will coordinate with supported CCMD for any coalition or host nation airlift contributions. (OPR: TCJ3, OCR: TCJ5, AMC/A35)

_____AMC/A3 will seek additional AMC and ARC assets through reprioritization of in-system missions, elimination of the training fence, utilize multi-modal options, utilize AETC schoolhouses, increased ARC, and civil airlift volunteerism (via TCAQ RFI), and/or request for selective mobilization of ARC units. (OPR: RDAP, AMC/A35, 618 AOC, AMC/A3B)

_____Air Component Operational Planning Team (OPT) will hold civil air carrier sidebar to determine concept of operations and feasibility of commercial air support (OPR: AMC/A35)

Assess APOE/APOD/Trans load Airfields, enroute restrictions, ground support, Chem/Tactics/Intel stage locations, MAWG-A/FAA Threat Review for commercial air feasibility

_____If airlift capability still does not meet requirements, A3B and TCAQ will arrange a teleconference between HQ AMC/A3 and MOBREPs to request additional volunteerism from industry. (AMC/A3B, TCAQ, Carrier Reps)

_____If additional assets from AMC, ARC, and commercial volunteerism do not meet requirements, AMC/A3B and 618 AOC will determine total number of CRAF aircraft to activate to meet CCMD requirements. (OPR: 618 AOC, OCR: AMC/A3B, AMC/A35)

_____TCJ3 JPT will confirm USTRANSCOM CRAF activation is warranted.

CRAF Pre-Activation:

_____Notify DOT Office of Emergency Transportation (DOT/OET) through the DOT Crisis Management Center (OPR: AMC/A3B OCR: TCJ3 will notify DOT LNO.)

_____Prepare and Staff CRAF Activation Warning message. Per AMCI 10-402, AMC/A3B prepares the message from the AMC/A3 to the CRAF carriers notifying them of possible CRAF activation. (OPR: AMC/A3B)

_____AMC/A3 release CRAF Activation Warning message when approved by AMC/CC. This will inform the carrier of the stage, segment and tails that are being considered for activation to assist in preparation of the fleet. (OPR: AMC/A3B)

_____Prepare UTC to begin staffing requirements and equipment for OST support at the ISB. This team will consist of up to 16 functional specialists, depending on requirements. (OPR: AMC/A3B)

CRAF Activation

_____HQ AMC/A3B drafts the CRAF Activation request for TCCC seeking SECDEF approval for CRAF activation. TCCC's initial request to SECDEF will specify activation authority for all forces up to and including Stages II and III as required. Separate CRAF activation requests can be made for each Stage or for multiple stages as required. (OPR: AMC/A3B)

Note: AMCI 10-402 has a preferred message formats for requesting CRAF Activation.

_____The AMC/CC-signed message is delivered to TCCC, with copies to TCAQ and TCJ5/4. TCCC either sends the activation request message to SECDEF via SIPR, classified Enterprise Information Management (EIM) and/or telephone. (OPR: TCJ3)

_____Request SECDEF approval for activation of specific CRAF stages. (OPR: TCCC)

Coordinate timing of activation announcement.

Advise on industry impact, if required.

If Stage III required, advise SECDEF of need to notify SECTRANS, SECSTATE, etc.

Secure SECDEF permission to grant CRAF aircrew access to mission essential information.

f. Task UTC requirements for OST

_____SECDEF approves activation and sends approval message via SIPR, EIM and/or telephone to TCCC. (OPR: SECDEF)

_____TCCC Informs AMC/CC of CRAF activation approval. TCCC activates CRAF through AMC/CC. (OPR: TCCC)

_____618 AOC determines what segment, section, and element of CRAF is needed for activation message. (OPR: 618 AOC OCR: AMC/A35, TCAQ, AMC/A3B)

_____TCAQ determines need/availability of aviation war risk insurance in coordination with TCJA; prepares contract to accompany activation message; and confirms funding availability with TCJ8 (OPR: TCAQ OCR: TCJ8, TCJA, AMC/JA)

_____A3B will receive and submit any deviations from carrier to the FAA. (OPR/AMC/A3B)

Note: Any carrier that requests deviations will comply with FAR Part 119.55

CRAF Activation Notification:

_____Prepare and staff CRAF Activation Message (and Aircraft Release/Deactivation Message if activation period is for minimum or short duration). AMC/A3B prepares activation message from AMC/A3 to the CRAF carriers with an action copy to TCCC and an information copy to the Chief of Staff, United States Air Force (OPR: AMC/A3B)

_____Release CRAF Activation Message when approved by AMC/A3. Message will be sent to carriers and Government agencies as necessary. (OPR: AMC/A3, OCR: AMC/A3B)

_____Disseminate DOD-wide announcements of CRAF activation through NIPR/SIPR e- mail, etc. (OPR: TCJ3)

Advise combatant commands, components, and units of CRAF participation.

Provide Public Affairs announcement(s), as required. (OPR: AMC/PA, USTC/PA)

CRAF Activation Implementation:

_____CRAF Activation Cell prepares written guidance/FRAGO for CRAF operations (AMC/A3, AMC/A4, AMC/A3B, 618 AOC, TCAQ, Carrier Reps):

CRAF CONOPs (transload, enroute restrictions, ground support, airfield

suitability, communications requirements, etc.)

Coordinate with FAA on carrier-requested waivers and exemptions (i.e. HAZMAT)

War Risk Insurance (if not already authorized for AOR)

Civil Airlift Support Element and Intermediate Staging Base requirements

Over flight and diplomatic clearance requirements if required.

Positioning of chem/bio ground ensembles, as required.

Identify CRAF aircrews for access to mission essential information and direct non- disclosure agreements.

Provide intelligence and tactics briefings, modes and codes as required

_____AMC integrates CRAF into operations (618 AOC, TCAQ, AMC/A3B):

618 AOC and TCAQ will coordinate mission assignments and execution

Provide liaison between APOEs, APODs, deploying units and CRAF crews

Coordinate enroute and theater assistance for CRAF missions, as required

Monitor tail utilization to ensure non-utilized aircraft are released per contract

Deploy carrier MOBREP or TAG personnel to Scott AFB, if required

_____TCJ3 will prepare Civil Reserve Fleet Summary Report (CRAFREP) and submit to Joint Staff J4 with information copies to CCDRs as per CJSM 3150.14B (format found in appendix A) within six hours of declaration on national emergency or when directed by CJCS and every 24 hours after activation message or as needed. (OPR: TCJ3 OCR: AMC/A3B)

_____CRAF Activation Cell monitors requirements and capacity daily to forecast requirements for CRAF capacity and recommends deactivation phasing via OPT & JPT. (OPR: CRAF Activation Cell OCR: 618 AOC, TCAQ AMC/A3B, AMC/A4, AMC/A2, MOBREPS)

CRAF Deactivation Notification:

_____Coordinate for CRAF Deactivation. ((OPR: AMC/A3B, OCR: TCAQ, AMC/A35, 618 AOC, TCJ3)

Ensure 11- or 15-day (stage dependent) notice before deactivation, if possible

Coordinate deactivation plan with CRAF carriers.

_____Prepare and staff CRAF Aircraft Release/Deactivation message when it is determined that no further aircraft call up will be immediately needed. AMC/A3B prepares Deactivation message from AMC/A3 to the CRAF carriers with an action copy to TCCC and an information copy to the Chief of Staff, United States Air Force. Message will be sent to carriers and Government agencies as necessary. (OPR: AMC/A3B)

_____TCJ3 promulgates Deactivation Announcement through DMS, NIPR/SIPR e-mail, etc. (OPR: TCJ3)

Advise combatant commands, components, and units of CRAF deactivation.

Provide Public Affairs announcement(s), as required.
