Pages: 7

This instruction implements Air Force Policy Directive (AFPD) 21-1, *Maintenance of Military Materiel,* 1 Aug 2018, and extends the guidance in Department of the Air Force Instruction (DAFI) 21-101, *Aircraft and Equipment Maintenance Management* 21 May 2015, for the Crashed, Damaged, or Disabled Aircraft Recovery (CDDAR) Program. It is applicable to all base agencies (military, civilian, and contractors) that have specific responsibilities to support CDDAR recovery efforts. Group Commanders will ensure all personnel are familiar with these procedures and take appropriate action when notified of an aircraft mishap. Refer recommended changes and questions about this publication to the Office of Primary Responsibility (OPR) using the DAF Form 847, *Recommendation for Change of Publication*; route DAF Forms 847 from the field through the appropriate functional chain of command. Ensure all records generated as a result of processes prescribed in this publication adhere to Air Force Instruction (AFI) 33-322, *Records Management and Information Governance Program*, and are disposed in accordance with the Air Force Records Disposition Schedule, which is located in the Air Force Records Information Management System.

SUMMARY OF CHANGES

This document has been revised and must be completely reviewed. Minor changes to this publication include updated references and dates, changes to the organization abbreviations and assemble location of the CDDAR team.

1. CDDAR Responsibilities.

1.1. **The Randolph Control Tower will:**

1.1.1. Activate the Primary Crash Alarm System (PCAS) upon notification of an aircraft mishap.

1.1.2. After consultation with the Supervisor of Flying, consider advising taxiing and airborne aircraft concerning the mishap and instructing aircraft to divert or hold position as required.

1.2. **The Command Post will:**

1.2.1. Notify the Maintenance Operations Center (MOC) of off–base aircraft type and approximate location.

1.2.2. Support for CDDAR after normal duty hours will be coordinated by the Director of Maintenance or Deputy Director of Maintenance after notification from the Command Post. When notified, the Director of maintenance or the Deputy Director will notify the Aircraft Maintenance Division Chief and/or Branch Chief who will activate the CDDAR emergency recall roster. Upon arrival, the CDDAR team will assemble at Hangar 3 for a briefing and await further instructions.

1.2.3. Coordinate with the Incident Commander (IC) to activate the Emergency Operations Center (EOC) and notify key personnel.

1.3. **Airfield Management Operations will:**

1.3.1. Activate the secondary crash net upon notification of a mishap.

2. CDDAR Equipment.

2.1. 12 FTW/AMXS (Aircraft Maintenance Squadron) maintains the crash recovery trailers containing the following equipment:

2.1.1. T-1A, T-6A, and T-38C sling assemblies.

2.1.2. T-38C jack pads, and bolts.

2.1.3. Tie down chains, load binders.

2.1.4. Pick, ax, hoe, rope, shovel, pry bar, and tethering ropes.

2.1.5. Air lifting bags.

2.1.6. Fuel, hydraulic, and oil sample kits.

2.2. The 12 FTW/AMXS provides a qualified crane operator.

2.2.1. A 15-ton crane from Randolph Air Force Base (AFB) or lease from civilian contractor.

2.3. **The Base Transportation will:**

2.3.1. Provide a 40-ft trailer and driver to support CDDAR operations.

2.3.2. Provide an operator and the All-Terrain Forklift, if required.

2.3.3. Coordinate with off-base agencies for additional equipment for removal of the aircraft from crash site when required. When base transportation cannot support heavy equipment requirements such as cranes and/or semi tractors and trailers, units must establish lease agreement(s) with local suppliers in accordance with (IAW) lease procedures established in Air Force Instruction (AFI) 24-302, *Vehicle Management*.

3. CDDAR Program Requirements.

3.1. **The Incident Commander will:**

3.1.1. If the aircraft mishap is located off-station the IC will determine the designated assembly area and coordinate required recovery operations and required recovery team support (Base Detail).

3.1.2. Coordinate with the Base Bio-Environmental Engineering (BEE) office to provide a briefing on all known hazards and Personal Protective Equipment (PPE) requirements before allowing them access to the site. IC's must ensure personnel are properly trained and equipped to enter any site where hazardous materials (including blood-borne pathogens) pose a threat to their safety.

3.1.3. Determine equipment, tools, vehicles and other supplies/consumables required for CDDAR operations.

3.2. **The 12 FTW/MX will:**

3.2.1. Appoint a CDDAR Team Chief and personnel certified for CDDAR operations (e.g., team chiefs, crane operators, team members). All CDDAR members will be tracked on Core Automated Maintenance System (CAMS) Integrated Maintenance Data System (IMDS) using specific course codes.

3.2.2. When required, 12 FTW/AMXS will assist in the recovery of transient aircraft the same Mission Design Series (MDS) as assigned wing aircraft. Situations that warrant assistance will be coordinated between the Contract Project Manager and MOC.

3.2.3. Host/Tenant Base CDDAR Responsibilities. The 12th Maintenance Group based at Randolph A.F.B., TX has overall responsibility for recovery of host/tenant crashed/disabled aircraft.

3.3. **The CDDAR Team Chief will:**

3.3.1. Coordinate with Maintenance Training Flight to develop course control documents and/or lesson plans for CDDAR training.

3.3.2. Ensure CDDAR procedures are coordinated with the Fire Department, Safety, Civil Engineering (CE), Readiness, Security Forces, Bio-Environmental, and Airfield Manager.

3.3.3. Maintain a list of tools and equipment required for CDDAR support. Inform the 12 FTW/MX (Maintenance Operations (Pensacola) in writing of equipment shortages or other serviceability issues that affect recovery operations.

3.3.4. Ensure sufficient personnel are trained for each assigned aircraft MDS to support CDDAR operations. Specific tasks and qualifications will be documented in the individual's training record CAMS/MIS as applicable.

3.3.5. Ensure CDDAR team members receive initial training comprised of both academic and hands-on recovery exercises.

3.3.6. Conduct/participate in annual training exercises for each assigned MDS. Coordinate with the maintenance Quality Assurance (QA) to evaluate CDDAR) exercises.

3.3.7. The CDDAR team will assist in obtaining aircraft fluid samples when requested. The CDDAR Team Chief is in charge of the actual lifting operation, CDDAR.

3.4. **The MOC will:**

3.4.1. Upon notification, MOC will initiate the emergency action checklist.

3.4.2. Inform the CDDAR Team, consisting of a Team Chief, a crane operator, a special vehicle driver, Egress, and Survival personnel and enough personnel to accomplish the recovery safely, will assemble at Hangar 3 with the needed support equipment and await instructions from the On-Scene Commander.

3.4.3. Provide radios and vehicles to support maintenance CDDAR representative(s).

3.4.4. Coordinate with maintenance agencies to ensure oxygen, hydraulic, fuel, and oil samples are taken. Ensure support equipment used to service the aircraft is impound pending investigation.

3.4.5. Instruct applicable work centers to isolate and secure all aircraft maintenance records. Notify maintenance Data Management to log out the IMDS CAMS database for aircraft involved. Records will be collected by maintenance QA and provided to the Wing Flight Safety Office upon request.

3.4.6. For aircraft not assigned to Randolph AFB, notify the owning base/organization of the mishap. Coordinate with the owning organization and local CDDAR Team Chief to determine support requirements for aircraft of different MDS than assigned wing aircraft.

3.5. **Transient Aircraft Services will:**

3.5.1. Maintain equipment (e.g., tow bars, tow vehicles) for unlike aircraft and may be requested to assist with the towing.

3.6. **Security Forces will:**

3.6.1. Respond and establish a disaster cordon based on the recommendation of the senior fire official, who will initially determine the size of the cordon. Security Forces will keep the site clear of nonessential personnel.

3.7. **Base Bio-Environmental Engineering (BEE) will:**

3.7.1. Determine PPE required to perform recovery of an aircraft containing composite/hazardous materials as established by technical data.

4. Geographically Separated Units.

4.1. **12 FTW/MX-OL Pensacola, FL.**

4.1.1. Per Support Agreement N00204-20100419-0001, crash and rescue services are provided by Naval Air Station (NAS) Pensacola. The Maintenance Directorate at NAS Pensacola will maintain liaison with NAS Pensacola Air Operations, for the purpose of providing the required support as a tenant unit as delineated by Department of the Air Force Instruction (DAFI) 21-101.

4.1.2. The maintenance directorate at NAS Pensacola will maintain a cadre of maintenance personnel who have received familiarization training sufficient to meet responsibilities as a tenant unit with regard to CDDAR.

4.1.3. CDDAR Equipment: Aircraft peculiar equipment, such as aircraft slings, are provided and maintain by the Contractor Operated & Maintained Base Supply (COMBS) and will be provided to the recovery/salvage activity when required. The maintenance directorate at NAS Pensacola is not required to maintain or provide any other CDDAR equipment.

TAYLOR T. FERRELL, Colonel, USAF
Commander, 12th Flying Training Wing

Terms

Accident Scene—The cordoned area surrounding an accident site from which all nonessential personnel and resources are evacuated and prohibited.

Accident Site—The area surrounding the impact point in which hazards to personnel (wreckage, fire, or damage) are readily identifiable.

Cordon—A physical barrier surrounding the accident scene where controls are established to preclude unauthorized entry.

Disabled Aircraft—An aircraft that has been rendered immobile that will require assistance to be moved.

Emergency Operations Center—The location where base support agencies convene to determine recovery efforts to support a major accident and establish command and control under the direction of the IC.

Ground Emergency—A malfunction or accident on the ground that requires immediate assistance.

Incident Commander—The person designated to coordinate the rescue and recovery efforts at the crash site. This individual is the personal representative of the installation commander and controls all base agencies responding to an accident scene.

In-Flight Emergency—An in-flight malfunction or problem which makes further flight uncertain or presents a clear and present danger to the aircrew or aircraft.

Major Accident—An accident involving Department of Defense materiel of such a magnitude to warrant response by the base disaster response force.
