Supersedes: AFI20-112, 21 March 2022

Pages: 20

This publication implements Air Force Policy Directive (AFPD) 63-1/AFPD 20-1, *Integrated Life Cycle Management* and it is re-designated Department of the Air Force Instruction (DAFI) 20-112 *Logistics Readiness (LR) Quality Assurance Program (QA)*. This instruction establishes the logistics readiness quality assurance policy, procedures and guidelines for a standardized, repeatable assessment and evaluation process throughout the United States Air Force (USAF) logistics readiness community to include supply chain management QA. This publication applies to all civilian employees and uniformed members of the Regular Air Force, the Air Force Reserve (AFR), the Air National Guard (ANG), the United States Space Force (USSF) and those who are contractually obligated to comply with Department of the Air Force (DAF) publications. For assistance with interpreting this instruction, contact your Major Command (MAJCOM) functional policy activity. ANG units should contact the Air National Guard Readiness Center functional policy section for guidance. Refer recommended changes and questions about this publication to the Office of Primary Responsibility (OPR) using DAF Form 847, *Recommendation for Change of Publication*; route DAF Form 847s from the field through the appropriate functional chain of command. This publication may be supplemented at any level, but all supplements must be routed to the OPR of this publication for coordination prior to certification and approval as outlined in Department of Air Force Instruction (DAFI) 90-160, *Publications & Forms Management*. The authorities to waive wing/unit level requirements in this publication are identified with a tier ("T-0, T-1, T-2, T-3") number following the compliance statement. See DAFI 90-160 for a description of the authorities associated with the tier numbers. Submit requests for waivers through the chain of command to the appropriate tier waiver approval authority, or alternately, to the publication OPR for non-tiered compliance items. Ensure all records generated as a result of processes prescribed in this publication adhere to Air Force Instruction 33-322, *Records Management and*

Information Governance Program, and are disposed in accordance with the Air Force Records Disposition Schedule, which is located in the Air Force Records Information Management System.

SUMMARY OF CHANGES

References throughout to "Air Force Reserve (AFR)" are hereby changed to "Air Reserve Component (ARC)." Reference throughout to "Air National Guard (ANG)" are hereby changed to "Air Reserve Component (ARC)." Paragraphs 2.1 and 2.8 were updated to specify Fuels-specific quality assurance and compliance requirements. **Paragraph 2.3.9** was added to refer Fuels quality assurance inquiries to the appropriate subject matter experts. **Paragraph 2.4.1** was updated with a note regarding reporting requirements for United States Space Force Deltas. **Paragraph 2.4.1.1.3** was updated to provide assessment scheduling flexibility for ARC units. **Paragraph 2.4.1.1.3.3** was updated to provide the minimum inspection frequency for Key Task List and Routine Inspection List items. Paragraph 2.4.1.1.4.1. was deleted. Tiering was added to **Paragraph 2.5.5**. **Paragraph 3.3.2** was updated to align military and civilian Quality Assurance personnel training with the Logistics Readiness Quality Assurance Evaluator Air Force Job Qualification Standard. Reference to DAFI 33-2670, *Total Force Development*, was removed from **paragraph 3.4.1.1**. **Paragraph 3.4.1.3** was updated to provide examples of the types of trainers that fall under this paragraph. **Paragraph 3.5**. **Acceptable Quality Levels (AQLs)** was removed. Title of **Attachment 2, "LOGISTICS READINESS FUNCTIONAL ASSESSMENT REQUIREMENTS"** is clarified and hereby changed to "**LOGISTICS READINESS FUNCTIONAL MONTHLY ASSESSMENT REQUIREMENTS**." Reference to "Vehicle Operations Element" in **Attachment 2** is changed to "Ground Transportation Element." The Fuels Management Functional Assessment Requirements were removed from **Attachment 2**, however the reference to DAFI 23-201, *Fuels Management*, still applies. Links to training sites and references have been updated. Other administrative changes were also made not affecting content.

Chapter 1—GENERAL PURPOSE AND SCOPE 4

1.1. Purpose. 4

1.2. Scope. 4

Chapter 2—ROLES AND RESPONSIBILITIES 5

2.1. Quality Assurance Evaluator (QAE). 5

2.2. Headquarters Air Force Logistics Readiness Division (AF/A4LR) and Headquarters Air Force Logistics, Operations, Plans, and Programs Division (A4LX) will: 5

2.3. MAJCOM/A4R will: 5

2.4. LR Activities will: 6

2.5. LR QA Program will: 7

2.6. Contracted Functions. 8

2.7. Munitions Activities. 8

2.8. Fuels Activities. 8

3.2. Personnel Requirements..... 9

3.3. QA Personnel Training Requirements. 9

3.4. Assessment Methodology. 10

3.5. Key Task List (KTL). 11

3.6. Routine Inspection List (RIL). 11

3.7. Process Assessment (PA). 12

3.8. Assessment Finding Procedures. 12

Attachment 1—GLOSSARY OF REFERENCES AND SUPPORTING INFORMATION 14

Attachment 2—LOGISTICS READINESS FUNCTIONAL ASSESSMENT REQUIREMENTS 19

Chapter 1

GENERAL PURPOSE AND SCOPE

1.1. Purpose. The purpose of the LR QA program is to provide the unit commander/civilian director and senior leadership with an assessment of the unit's ability to perform key logistics processes by ensuring standardized, repeatable, technically compliant process execution, while promoting a culture of professional excellence and personal responsibility. The program's primary focus is on personnel proficiency and adherence to established policies and procedures.

1.2. Scope. The LR QA program is focused on enabling and strengthening commanders' mission effectiveness and efficiency. QA evaluators should possess the ability to be critical, communicative, creative, and cognitive with the capability to motivate and promote military discipline, improve unit performance, and manage excellence up and down the chain of command at all levels. To identify issues interfering with readiness, economy, efficiency, discipline, effectiveness, compliance, performance, surety and management excellence. Contracted organizations shall follow the requirements established in their contract's Performance Work Statement (PWS) and the Quality Assurance Surveillance Plan (QASP) for an accepted quality program.

Chapter 2

ROLES AND RESPONSIBILITIES

2.1. Quality Assurance Evaluator (QAE). Where applicable, QAEs are responsible for coordinating compliance actions for their assigned logistics management function and will be aligned under individual flights within the LRS. (T-2). Commanders have the option to consolidate QA functions within a single office. However, the positions must remain aligned under the individual functional flights. (T-2). Evaluations will be accomplished by qualified subject matter experts from the various Air Force Specialty Codes (AFSCs) resident in the LR activity. (T-2). AFR and ANG units are authorized to tailor the QAE in order to accomplish the quality assurance function and complete mission requirements. **Note**: Fuels Management Flights/activities will adhere to **para 2.8** (T-1)

2.2. Headquarters Air Force Logistics Readiness Division (AF/A4LR) and Headquarters Air Force Logistics, Operations, Plans, and Programs Division (A4LX) will:

2.2.1. Develop, articulate, and clarify all Air Force LR QA guidance.

2.2.2. Develop/maintain/approve Key Task List (KTL) and Routine Inspection List (RIL) pertinent to MAJCOM/AFSC unique requirements via Career Field Education and Training Plan (CFETP). Develop process assessment (PA) checklists that will be used by all logistics readiness activities and reported to parent MAJCOMs.

2.2.3. Ensure MAJCOMs utilize Logistics Evaluation Assurance Program (LEAP) as the automated IT/SharePoint to manage all aspects of the program while serving as the central repository.

2.2.4. Review effectiveness of the overall LR QA program through metrics pertinent to AFSC unique requirements.

2.2.5. Provide funding and sustainment for LEAP.

2.3. MAJCOM/A4R will:

2.3.1. Manage QA programs within the command.

2.3.1.1. Report Headquarters Air Force (HAF) process assessment performance to AF/A4LR.

2.3.2. Ensure units are executing PAs, KTLs, and RILs developed by AF/A4LR or AF/A4LX.

2.3.3. Recommend program guidance and administrative changes to AF/A4LR/A4LX.

2.3.4. Ensure units are utilizing LEAP as the repository for the LR enterprise.

2.3.5. Ensure distribution and posturing for LEAP in collaboration with program office and AF/A4LR/A4LX.

2.3.6. Ensure LEAP site managers gain access to the applicable trouble ticketing system.

2.3.7. Monitor all submitted open and queued LEAP trouble tickets tracked to closure within their command.

2.3.8. Ensure records are kept for MAJCOM and higher-level developed KTLs and RILs.

2.3.9. Coordinate inquiries regarding the Fuels Quality Compliance Program in DAFI 23-201, *Fuels Management*, to the applicable CMD Fuels Staff SME and/or the AF/A4LR Air Force Fuels Career Field Manager.

2.4. LR Activities will:

2.4.1. Establish a LR QA program. (T-1). Note 1: Air Mobility Command (AMC) Forward Supply Locations (FSLs) QA program will be part of and under direction of parent air mobility squadron. AMC FSLs will run KTL/RILs and Management Internal Control Toolset (MICT) checklists associated with materiel management. Note 2: For Space Force installations, the QA program must include the relevant USSF Field Commands in addition to Air Force Materiel Command for all MAJCOM reporting requirements.

2.4.1.1. Assign a QA manager. (T-1)

2.4.1.1.1. QA manager will manage the unit-level QA program. (T-1)

2.4.1.1.2. Ensure quality evaluators are trained IAW **Chapter 3** of this publication. (T-1).

2.4.1.1.3. Ensure the required number of process evaluations and inspections are conducted monthly based on the approved QA evaluation and inspection plan, and assessment results are reported to each respective commander, flight chief, superintendent, and the training manager. (T-1). Exemptions/exceptions to monthly functional area assessments will be developed in writing and submitted to the parent MAJCOM for approval (T-2).

2.4.1.1.3.1. Evaluations will be based on **Attachment 2**, **Table A2.1** "Monthly Functional Assessment Requirements" of this publication to determine the required number of evaluations based on the number personnel assigned to functional areas. (T-2). AFR and ANG units are authorized to tailor **table A2.1** to evaluate personnel assigned to functional areas.

2.4.1.1.3.2. Inspections should be compliance based to find undetected non-compliance and to aid in the Unit's Self-Assessment Program (USAP) in accordance with DAFI 90-302, *The Inspection System of The Department of The Air Force*.

2.4.1.1.3.3. All KTL/RIL evaluation items must be inspected annually at a minimum.

2.4.1.1.4. Track all evaluations rated Fail, Technical Data Violation (TDV), Detected Safety Violation (DSV), or Unsatisfactory Condition Report (UCR) until resolved. Comply with the written response policy defined by the commander, to avoid overdue or overlooked replies. (T-1).

2.4.1.1.5. Commanders must define what the written response policy will be for all entries input into LEAP.

2.4.1.1.6. Provide a monthly summary of evaluations to unit commanders to include all late replies and repeat findings. (T-1).

2.4.1.1.7. Provide a report summarizing AF/A4LR Process Assessments and provide to the parent MAJCOM/A4R monthly.

2.4.2. Review reported findings for appropriate corrective actions. (T-1).

2.4.2.1. Determine when additional assessments are required in a specific area based upon findings. (T-2).

2.4.3. Review and submit unit developed KTL/RIL items to MAJCOM. (T-1).

2.4.4. Utilize LEAP as the repository for the AF LR inspections/evaluations. (T-1). Note: QAEs can use the DAF Form 4421, Logistics Readiness Quality Assurance (LR QA) Assessment Form, if the LEAP application isn't available.

2.4.5. Utilize MICT to support the unit's self-assessment program in accordance with DAFI 90-302, *The Inspection System of the Department of the Air Force*. (T-1). Note: The unit Quality Assurance Manager may act as the unit Self-Assessment Program Manager.

2.5. LR QA Program will:

2.5.1. Evaluate the performance of logistics procedures performed within the organization or falling under the responsibility of the commander/director and report results. (T-1).

2.5.2. Make recommendations for improving the effectiveness of all logistics processes. (T-1).

2.5.3. Provide functional area inspection and evaluation quotas by type (e.g., Personnel Evaluations (PEs), Quality Verification Inspections (QVIs), Special Interest (SIs), etc.). Based on the unit's mission posture, a commander approved mixture of evaluations and inspections should be included in the monthly QA evaluation and inspection plan. See **paragraph 2.5.11** for the commander-approved monthly QA evaluation and inspection plan.

2.5.4. Incorporate Special Interest Items (SII) resulting from cross-tells or determined by commander driven metrics or other concerns. Ensure SIIs are reviewed, maintained, and appropriate action(s) taken.

2.5.5. Employ HAF developed PA/RIL/KTL items. (T-1). Units may create locally developed RIL/KTL to improve effectiveness of logistics processes.

2.5.6. Utilize appropriate training records (i.e., CFETP, AFJQS, Training Business Area 2.0 [TBA], etc.), and policy and procedural guidance to evaluate and inspect flights. (T-1).

2.5.7. Determine when job guides and manuals associated with assessments, evaluations and inspections are current and available. Notify the appropriate organization (HAF, MAJCOM, wing, and group) when deficiencies are found. (T-1).

2.5.8. Enter observations, inspections, and evaluation reports into LEAP. (T-1).

2.5.9. Track all failed assessments, TDV, DSV, or UCR until resolved within LEAP. (T-1).

2.5.10. Schedule customer assistant visits as requested by installation customers, at soonest availability with Logistics Readiness Squadron Commander (LRS/CC) or respective LR activity unit commander's approval and without impacting required inspection schedules.

2.5.11. Provide a developed monthly QA evaluation and inspection plan. The plan must show the areas, types, and number of assessments, inspections and evaluations that must be conducted over the course of the month. The plan will provide QA clear direction for assessing and measuring compliance. Incorporate safety, legal, and environmental rules, restrictions and regulations into developing Evaluation and Inspection Plans to ensure the safety of both inspectors and those being inspected by consulting with the following agencies as needed: (T-1)

2.5.11.1. The local legal counsel and ensure compliance with federal, state, and local environmental laws/regulations and AF publications. At overseas locations, ensure compliance with Final Governing Standards (FGS) or the Overseas Environmental Baseline Guidance Document (OEBGD) in the absence of the FGS. (T-0).

2.5.11.2. The installation Environmental Protection Committee (EPC), base environmental manager, base civil engineer, base bioenvironmental engineer, wing safety, staff judge advocate, unit environmental coordinators and the Environmental Management System (EMS) cross-functional team semiannually to stay current on local environmental rules, restrictions, and regulations. (T-1).

2.5.12. Gain access to the applicable trouble ticketing system for LEAP.

2.5.13. Input all potential LEAP issues into the trouble ticketed system.

2.5.14. Monitor all trouble tickets until closure.

2.6. Contracted Functions. Contracted functions will be evaluated by the contract officer representative IAW the contract's PWS using the QASP. (T-1). IAW DAFI 63-138, Acquisitions of Services, QA can act as the subject matter experts (SMEs) for the contract officer representative.

2.7. Munitions Activities. Munitions activities assigned to an LRS are responsible to the LRS/CC for quality assurance, will follow the quality assurance program requirements prescribed by DAFMAN 21-200, Munitions and Missile Maintenance Management. (T-1). Munitions quality assurance reporting will be through the QA leadership to the LRS/CC. (T-1).

2.8. Fuels Activities. Fuels Management Flights/activities must adhere to robust DoD quality assurance and compliance requirements that directly impact safety of flight and sortie generation. To ensure these standards are met, the Fuels Quality Compliance Section maintains direct oversight of the Fuels Environmental and Safety Element and the Fuels Laboratory Element. Fuels activities remain responsible to the LRS/CC; however, they will adhere to fuels quality compliance program requirements prescribed in DAFI 23-201, *Fuels Management*. (T-1)

Chapter 3

EVALUATION REQUIREMENTS AND METHODOLOGY

3.1. Program Guidance. The LR QA representative will perform analysis, surveillance, and trend identification of LR processes through evaluations of personnel on all duties assigned within their functional area to include personnel and inspections of processes. Commanders must ensure oversight is provided for all LR processes. (T-1).

3.2. Personnel Requirements. Personnel assigned QA duties within LR activities must be impartial, objective, and consistent in all evaluations. Leadership is encouraged to select qualified personnel that are considered SMEs.

3.2.1. Military QAEs must hold the same AFSC of those being evaluated on technical tasks contained in the applicable CFETP. General evaluations or observations must be conducted by any qualified evaluator. (T-1).

3.2.2. Civilian QAEs must have experience in the functional discipline they are responsible for evaluating. Evaluator duties must be included in the individual's position description and their performance plan. (T-1). For those QA inspectors who perform QA duties as an additional duty, those duties will be added to their performance plan only.

3.2.3. Air Reserve Component (ARC) LRs may utilize traditional members not on extended active duty as QAE.

3.2.4. Those component LR activities (active, guard and reserve), which are collocated, are encouraged to integrate QAE functions to facilitate diversity and experience while consolidating and streamlining workload. ANG LRS/CCs must request to waive the AFSC requirement only in manning shortage situations and after total force integration opportunities have been exhausted. (T-2).

3.3. QA Personnel Training Requirements.

3.3.1. All QA personnel must be trained to perform quality assurance evaluator functions (T-1). Training must cover evaluator responsibilities, inspection and evaluation techniques, metrics analysis, inspection worksheet documentation, report writing, problem-solving, publications management, and actions to prevent personnel injury or equipment damage. Personnel performing QA duties must complete the following mandatory requirements to become fully qualified: (T-1).

3.3.1.1. Air Force Institute of Technology Logistics Readiness Squadron Quality Assurance Evaluator Course (AFIT WLOG 143). This course is designed to educate LR evaluators on the concept, policies and responsibilities of the LR Quality Assurance Program contained in this DAFI. It will ensure a standardized method is used to evaluate a unit's compliance with Air Force, command and local directives and policies. Completion of this course is mandatory to qualify as an evaluator.

3.3.1.2. Nuclear Weapons Related Materiel (NWRM) Fundamentals Course IAW applicable CFETPs. This course can be found on MyLearning.

3.3.1.3. Evaluators must pass three Evaluator Proficiency Evaluations (EPE) within 120 days of appointment (the first EPE will be accomplished within 40 days). (T-2). EPEs will be conducted by a qualified evaluator to ensure the member can execute the proper steps to conduct an evaluation. Each quality evaluator must pass the EPEs prior to performing unsupervised evaluations and inspections. ARC evaluators must accomplish mandatory training and pass three EPEs within 210 days of appointment (the first EPE will be accomplished within 90 days). (T-2).

3.3.2. For military and civilian personnel, a master training plan will be created and documented using the Logistics Readiness Quality Assurance Evaluator Air Force Job Qualification Standard. (T-2). Training will be documented accordingly in the member's accountable training system of record.

3.4. Assessment Methodology. Assessments are the formal avenue to ensure the effectiveness of logistics procedures and identify areas for improvement. They provide leadership with factual information about the health and effectiveness of the unit and training. Accurate assessments of personnel proficiency and processes are critical to gauging unit effectiveness. This program enhances cross-tell and facilitates benchmarking, while allowing latitude to adapt it for local needs. QAE assessments will be conducted through the use of evaluations, inspections, and observations. (T-2).

3.4.1. Evaluations. Represent the direct evaluation of a logistics action, inspection, or training conducted/performed by an individual or team. Evaluations are used to assess job proficiency, degree of training, and compliance with technical data or instructions. Any individual performing, supervising, or evaluating logistics tasks is subject to a direct evaluation. Evaluations include:

3.4.1.1. Personnel Evaluations (PE). A PE is the direct evaluation of an individual or team conducting/performing a logistics action. PEs may be conducted on task-oriented functions such as equipment maintenance as well as process-oriented functions such as vehicle dispatch. Task performance standards are trained and qualified as "Go" level. "Go" means the individual can perform the task without assistance and meets local demands for accuracy, timeliness, and correct use of procedures.

3.4.1.2. Evaluator Proficiency Evaluation (EPE). An EPE is the direct evaluation of QA or any individual performing a quality/compliance assurance function in a unit.

3.4.1.3. Trainer Proficiency Evaluations (TPE). A TPE is the direct evaluation of a unit instructor/trainer or certifier to determine their ability to teach accurately and sufficiently. TPEs also assess weapon system, equipment or process knowledge; teaching methods and techniques; the ability to operate trainers (e.g., trainer equipment, trainer programs, etc.); and adequacy and effectiveness of training programs. Any individual training or certifying personnel on a task or process is subject to a TPE.

3.4.2. Inspections. Utilized to identify deficient products, processes or equipment while ensuring compliance with established standards. Inspections are rated as "Pass/Fail." Inspections include:

3.4.2.1. Quality Verification Inspection (QVI). A QVI is an inspection of equipment condition or a process after an inspection, repair action or process that has been completed by a technician or supervisor to assess if it was properly completed. The QVI finding should reflect deficiencies by the individual who accomplished the task and identify specific discrepancies.

3.4.2.2. Special Inspections (SI). SIs are inspections not covered by QVIs or evaluations and may include, but are not limited to, inspections of: equipment forms, document control procedures and file plans, inventory controls, Technical Order (T.O.) files, vehicle inspections, housekeeping, safety practices, and other interest items identified by HAF and MAJCOMs. SIs may be compliance or proficiency oriented.

3.4.3. Observations. Defined as the observed events or conditions with safety implications or technical violations not related to an evaluation or inspection that are considered unsafe, not in accordance with established procedures, or in the case of equipment, unfit to operate. Observations include:

3.4.3.1. Detected Safety Violation (DSV). A DSV is an observed unsafe act by an individual. The QAE must stop the unsafe act immediately (T-0). Do not document a separate DSV on an individual undergoing a direct evaluation since the unsafe act automatically results in a "Fail" rating. Annotate the failure with "Safety" when a safety violation is committed during an evaluation. Report all safety incidents to the squadron safety representative IAW local safety policy.

3.4.3.2. Technical Data Violation (TDV). A TDV is an observation of any person performing maintenance or another logistics process inconsistent, contradictory, or without the required technical data present at the job site when mandatory use is required. The technician must have knowledge of all general directives associated with the job prior to performing the task. (T-1). Do not document a separate TDV on an individual undergoing a direct evaluation since failure to use technical data automatically results in a "Fail" rating. Annotate the failure with "Tech Data" when a TDV is committed during an evaluation.

3.4.3.3. Unsatisfactory Condition Report (UCR). A UCR is an unsafe or unsatisfactory condition, other than a DSV, chargeable to the work center supervisor. UCRs will be documented even when it is not possible to determine who created the condition. (T-1).

3.5. Key Task List (KTL). The KTL is a HAF, MAJCOM or unit developed list of required inspections. The KTL is designed to cover tasks that are complex and those affecting critical logistics processes, nuclear surety and/or safety as designated by leadership. All logistics actions/functions listed on the KTL require mandatory call-in to QA each time the logistics action/function is accomplished. QAE will respond and perform an inspection (T-3). The QAE must review and update unit KTLs as required to ensure they encompass those logistics actions/functions directly affecting quality of complex critical logistics processes. (T-1).

3.6. Routine Inspection List (RIL). RILs are HAF, MAJCOM or unit developed lists of routine inspections that must be performed with an identified frequency. The QAE shall consolidate inputs provided by flight leadership for suggested RIL items/frequency and obtain LRS/CC or respective LR activity unit commander's approval. Tasks shall not be removed from the RIL without issuing authorities' approval (e.g., HAF, MAJCOM, LRS/CC). (T-1).

3.7. Process Assessment (PA). The PA is a HAF developed list of required process assessments. PAs are areas of focus for management used to gather data and assess the status of specific programs and conditions in the field. There should be no more than five active PAs at any given time.

3.8. Assessment Finding Procedures.

3.8.1. The QAE will notify the LRS/CC or LR activity unit commander immediately of all major findings or failures related to safety, security, or nuclear surety. (T-1). Additionally, the QAE will suspense evaluations/inspections receiving a fail rating, DSV, TDV, or UCR to the appropriate flight commander/ Noncommissioned Officer In Charge (NCOIC) or appropriate LR activity representative for corrective action(s). (T-1).

3.8.2. Work centers will provide a corrective action plan to all findings by the 10th duty day, stating the action taken to resolve the identified problem(s) to include an implementation date or estimated completion date. (T-2). Root cause analysis will be conducted by the evaluated work center for all major findings to determine underlying causes and appropriate corrective action (T-2). The LR QAEs may assist with conducting root cause analysis. Unit commanders will be briefed on open/closed items. (T-2). ARC units will submit replies by the end of the next scheduled unit training assembly/regularly scheduled drill. (T-2).

3.8.3. Evaluators will provide the following:

3.8.3.1. Introductory and post-evaluation feedback to personnel, as appropriate to the evaluation. (T-1).

3.8.3.2. Offer guidance/suggestions as needed during the post-evaluation feedback session. (T-1).

3.8.3.3. Tracking number assigned to each evaluation within LEAP. (T-1).

3.8.3.4. Use specialty training standards to evaluate authorized areas. (T-1).

3.8.3.5. Maintain all specialty training, i.e., hazardous materials, joint inspections, etc. (T-1).

3.8.3.6. Review all individuals' records, where applicable, for those evaluations receiving a fail, DSV or TDV to verify training documentation. (T-1).

3.8.3.7. Identify discrepancies in documentation to the individual's supervisor with follow-up action to the unit training manager. (T-1). At no time will the evaluation ratings be changed based On the Job Training (OJT) record documentation discrepancies alone.

3.8.4. Findings are validated deficiencies and will be tracked at the unit level within LEAP until resolved. The following are the two types of findings:

3.8.4.1. Major finding. A critical or significant deficiency that results or could result in widespread or significant mission impact or failure.

3.8.4.2. Minor finding. A deficiency that is procedurally incorrect but only has minor mission impact.

3.8.4.3. All findings (e.g., failed evaluation/inspection or observation) will include a reference to the TO, instruction, and/or command standard individually violated. QAE will review results with the individual(s) and supervisor upon completion of each evaluation. (T-1).

ELIZABETH E. ARLEDGE, Maj Gen, USAF
Director of Logistics
DCS/Logistics, Engineering & Force Protection

Terms

Acceptable Quality Levels (AQLs)—An AQL denotes the maximum allowable number of minor findings that a process or product may be charged for the task to be rated "Pass." It must be strict enough that the task, process or product meets an acceptable level of quality, but isn't so strict that a pass rating is unattainable.

Assessment—Assessments are the formal avenue to ensure the effectiveness of logistics processes and identify areas for improvement.

Detected Safety Violation (DSV)—An observed unsafe act by an individual.

Evaluations—Represent the direct evaluation of a logistics action, inspection, or training conducted/performed by an individual or team. Evaluations are used to evaluate job proficiency, degree of training, and compliance with technical data or instructions. Any individual performing, supervising, or evaluating logistics tasks is subject to a direct evaluation.

Evaluator Proficiency Evaluations (EPE)—An EPE is the direct evaluation of QAE or any individual performing a quality/compliance assurance function in a unit.

Inspections—Represents inspections of products, processes, and equipment to ensure compliance standards. Inspections are rated as Pass/Fail.

Key Task List (KTL)—The KTL is a HAF, MAJCOM or unit developed list of required inspections. The KTL is designed to cover tasks that are complex and those affecting critical logistics processes, nuclear surety and/or safety as designated by leadership. All logistics actions/functions listed on the KTL require mandatory call-in to QA each time the logistics action/function is accomplished.

Logistics Evaluation Assurance Program (LEAP)—A dynamic web application designed to provide the Logistics Quality Assurance the capability for direct input of the quality assurance evaluation results.

LR activities include—Air Force Sustainment Center; Air Logistics Complex; Air Force Installation and Mission Support Center.

Major finding—A deficiency that results or could result in widespread or significant mission impact or failure.

Management Internal Control Toolset (MICT)—Is an interactive application designed to assist in managing self-assessment programs.

Minor Finding—A deficiency that is procedurally incorrect but only has minor mission impact.

Observations—Represents observed events or conditions with safety implications or technical violations not related to an evaluation or inspection that are considered unsafe, not in accordance with established procedures, or in the case of equipment, unfit to operate.

Process Assessment (PA)—The direct evaluation of specific logistics programs using HAF-generated checklists as a baseline for evaluations. HAF/A4LR uses PAs to gather data and assess the status of specific programs and conditions in the field

Personnel Evaluation (PE)—The direct evaluation of an individual or team conducting/performing a logistics action. PEs may be conducted on task-oriented functions such as equipment maintenance as well as process-oriented functions such as vehicle dispatch.

Quality Verification Inspection (QVI)—An inspection of equipment condition or a process after an inspection, repair action, or process that has been completed by a technician or supervisor to assess if it was properly completed. The QVI finding should reflect deficiencies by the individual who accomplished the task and identify specific discrepancies.

Routine Inspection List (RIL)—The RIL is a HAF, MAJCOM or unit developed list of routine inspections that must be performed with an identified frequency. The QA Section shall consolidate inputs provided by flight leadership for suggested RIL items/frequency and obtain Logistics Readiness Squadron Commander (LRS/CC) approval. Tasks shall not be removed from the RIL without issuing authorities' approval (e.g., AF, MAJCOM, LRS/CC).

Special Inspections (SI)—SIs are inspections not covered by QVIs or Evaluations and may include, but are not limited to, inspections of: equipment forms, document control procedures and file plans, inventory controls, Technical Order (T.O.) files, vehicle inspections, housekeeping, safety practices, and other interest items identified by Headquarters Air Force and MAJCOMs. SIs may be compliance or proficiency oriented.

Subject Matter Expert (SME)—A SME is an individual with authoritative knowledge and experience in a specific, narrow field, system, or operational process and can provide technical guidance, validate training, and ensure accuracy in complex tasks, often serving as the go-to person within their unit. Since the SME exhibits the highest level of expertise in performing a specialized job, task, or skill within an organization, they should possess at a minimum a 7-skill level in the AFSC they are assessing.

Technical Data Violation (TDV)—A TDV is an observation of any person performing maintenance or another logistics process inconsistent, contradictory or without the required technical data present at the job site when mandatory use is required. The technician must have knowledge of all general directives associated with the job prior to performing the task. Do not document a separate TDV on an individual undergoing a direct evaluation since failure to use technical data automatically results in a “Fail” rating. Annotate the failure with “Tech Data” when a TDV is committed during an evaluation.

Trainer Proficiency Evaluations (TPE)—The direct evaluation of a unit instructor/trainer to determine their ability to teach accurately and sufficiently. TPEs also assess weapon system, equipment or process knowledge; teaching methods and techniques; the ability to operate trainers; and adequacy and effectiveness of training programs. Any individual training personnel on a task or process is subject to a TPE.

Unsatisfactory Condition Report (UCR)—An unsafe or unsatisfactory condition, other than a DSV, chargeable to the work center supervisor.

Attachment 2

LOGISTICS READINESS FUNCTIONAL ASSESSMENT REQUIREMENTS

Table A2.1. Monthly Functional Assessment Requirements.

Functional Assessment Requirements	Minimum Personnel Assessments
Distribution	
Passenger Movement Element	20%
Cargo Movement Element	25%
Personal Property Section	20%
Applicable 2T2 Activity	15% / 4% **See Notes: 1 & 2**
Ground Transportation Element	20%
Plans and Integration Section	5%
Fuels Management	**See Note: 3**
LRS Materiel Management	
Central Storage Element	20%
Flight Service Center (FSC)	15%
Aircraft Parts Store (APS)	20%
Hazardous Materiel Pharmacy (HAZMAT)	10% **See Note: 4**
Physical Inventory Control Section	15%
Inspection Section	10%
Individual Protective Equipment (IPE)/ Individual Equipment Element (IEE)	20%. **See Note: 4**
Customer Support Liaison Element	15%
Equipment Accountability Element	15%
Decentralized Materiel Support	15%
SCOW Materiel Management	***See Note: 5**
Stock Control	5%
Records Maintenance	5%
General Support Division (GSD) Stock Fund	5%
Centralized Equipment Management	5%
MICAP Support Activities	5%
Enterprise Mobility Equipment & Clothing	5%
ILS-S Computer Operations	5%
Weapons System Support	5%
LR Activities	
***Assign elements and % as mission requirements deviate from listed requirements	**See Note: 6**
Vehicle Management	
Vehicle Vehicular Equipment Maintenance	15%
Materiel Handling Equipment Maintenance	15%
Refueling Maintenance	15%
Fire Truck Maintenance	15%

Allied Trades	15%
Customer Service	10%
Vehicle Management & Analysis	10%
Materiel Control	10%
Note 1: 15% for combat mobility flight (added to air transportation function and/or unilateral aircrew training) **Note 2:** 4% for Airlift Support Functions (i.e., and AMC aerial port exists on base) **Note 3:** Refer to DAFI 23-201, Chapter 8 *Fuels Quality Compliance Requirements* **Note 4:** This applies to those LRS squadrons that do not have the function outsourced. **Note 5:** 635 SCOG/735 SCOG percentages will be conducted during annual assessments. **Note 6:** LR Activities include: Cryptologic and Cyber Systems Division; Air Force Sustainment Center; Air Logistics Complex and Air Force Installation and Mission Support Center.
