Pages: 13

This publication implements Department of the Air Force Policy Directive (DAFPD) 36-30, *Military Entitlements*, and is consistent with Public Law 111-148, *The Patient Protection and Affordable Care Act,* Section 4207; United States (US) Office of Personnel Management (OPM) Memorandum for Heads of Executive Departments and Agencies, *Nursing Mothers in Federal Employment*; US OPM, *Guide for Establishing a Federal Nursing Mother's Program*; Under Secretary of Defense for Personnel and Readiness Memorandum, *Department-Wide Policy for Nursing and Lactation Rooms*; Department of Defense (DoD) Unified Facilities Criteria (UFC) 1-200-01, *DoD Building Code (General Building Requirements)*; and, Department of the Air Force Manual (DAFMAN) 91-203, A*ir Force Occupational Safety, Fire, and Health Standards*. It establishes minimum requirements for providing lactation accommodations to meet the needs of Total Force Airmen and Guardians, including cadets and US government civilian employees, herein referred to as "personnel," within units to express milk. It also identifies additional considerations and requirements for the refrigeration and storage of expressed milk. In collaboration with the Deputy Chief of Space Operations for Personnel, Chief of the Air Force Reserve, Director of the Air National Guard, and Deputy Air Force Chief of Staff for Manpower, Personnel and Services, the Assistant Secretary of the Air Force for Manpower and Reserve Affairs develops policy for Total Force Human Resource Management. This publication applies to the United States Space Force, Regular Air Force, the Air Force Reserve, and the Air National Guard. Ensure all records generated as a result of processes prescribed in this publication adhere to Air Force Instruction 33-322*, Records Management and Information Governance Program,* and are disposed in accordance with the Air Force Records Disposition Schedule, which is located in the Air Force Records Information Management System. Refer recommended changes and questions about this publication to the office of primary responsibility (OPR), using DAF Form 847,

Recommendation for Change of Product; route DAF Forms 847 from the field through the appropriate functional chain of command. This publication may be supplemented at any level, but all supplements must be routed to the OPR of this publication for coordination prior to certification and approval. The authorities to waive requirements in this publication are identified with a Tier ("T-0, T-1, T-2, T-3") number following the compliance statement. See DAFMAN 90-161, *Publishing Processes and Procedures*, for a description of the authorities associated with the Tier numbers. Submit requests for waivers through the chain of command to the appropriate Tier waiver approval authority, or alternately, to the requestor's commander for non-tiered compliance items.

SUMMARY OF CHANGES

This instruction is substantially revised and must be completely reviewed. Policy language is updated for clarity, simplification and to reduce redundancies. It also incorporates formatting changes to align with DAFMAN 90-161, *Publishing Processes and Procedures.* The term *"*lactating personnel" replaces "nursing mothers" as a more scientifically accurate designation, recognizing all who lactate, regardless of parental status. The focus of the publication was expanded beyond the physical lactation room to all lactation accommodations. Added minimum authorized time frames for expressing milk, length of accommodation for as long as personnel are lactating, guidelines for dynamic temporary duty travel (TDY), and additional references to other applicable publications inserted throughout.

Chapter 1

OVERVIEW

1.1. Purpose. DAF is committed to Airman and Guardian health as a core component of a lethal, ready force and will provide lactation accommodations for lactating personnel. The procedures to implement lactation accommodations balance the mission readiness needs of units while affording personnel the opportunity to continue lactating. This aligns with the United States Surgeon General's goals for increasing lactation for a minimum of one year after a child's birth. Additionally, it follows the American Academy of Pediatrics endorsement of continued human milk consumption as long as mutually desired by parent and child for two years or beyond. The guidance contained herein details procedures for commanders to support lactating personnel within (unit) facilities and duty locations under the control of a unit commander (or equivalent) with necessary accommodations to meet their individual goals, regardless of the time after the child's birth.

1.2. DAF Installations. For the purposes of providing lactation areas, the guidance contained herein applies to all DAF controlled aircraft and real property, as defined in DAFPD 32-90, *Real Property Management*, and is administered by commanders or directors at the unit level or higher. With regard to facilities, the DAF defines unit as squadron-level or equivalent. Units other than a squadron-level may coordinate requirements with other installation units similar to the procedures in **paragraph 2.7** and subparagraphs. These requirements also apply to training centers, functional community schoolhouses, or other centralized DAF controlled real property such as managing headquarters facilities.

Chapter 2

ROLES AND RESPONSIBILITIES

2.1. The Assistant Secretary of the Air Force for Manpower and Reserve Affairs (SAF/MR): exercises authority and oversight on all health matters for all personnel, including those who are lactating.

2.2. The Assistant Secretary of the Air Force for Installations, Environment, and Energy (SAF/IE): exercises existing authorities and oversight as delegated and described within Headquarters Air Force Mission Directive 1-18, which includes utilization of DAF real property and facilities.

2.3. The Air Force Surgeon General (AF/SG): serves as the DAF focal point for matters involving military health readiness, to include those matters of lactating personnel.

2.4. The Deputy Air Force Chief of Staff for Logistics, Installations and Mission Support (AF/A4): serve as the DAF focal points for matters involving utilization of DAF real property and facilities for lactation areas on DAF installations, to include issuing additional guidance or instructions to meet requirements.

2.5. The Deputy Air Force Chief of Staff for Manpower, Personnel and Services (AF/A1): serves as the DAF focal point for issuance of policy and guidance for lactation areas to support lactating personnel. The Directorate of Air Force Services (AF/A1S) develops policy and guidance for DAF installations to establish lactation areas pursuant to established law and policy requirements.

2.6. MAJCOMs and FLDCOMs: serve as DAF focal points for lactation accommodations within mission systems under their purview and process waiver requests as applicable.

2.7. Installation/Wing/Delta/Group/Unit Commanders will:

2.7.1. Enforce DAF-approved lactation accommodations as outlined in this instruction.

2.7.2. Provide accommodation for lactating contractor personnel as outlined in **paragraph 3.1**. Refer to contract for break time and TDY entitlements.

2.7.3. Ensure all personnel are treated with dignity and respect and afforded equal opportunity and right to nondiscrimination, while conferring no special privileges solely due to status as a lactating Airman or Guardian.

2.7.4. Consult with Civil Engineer Squadron, or equivalent organization, for submitting and obtaining approval for work required to modify facilities to establish lactation areas consistent with DAFMAN 32-1084, paragraph 4.10 and DoD UFC 1-200-01 paragraph 1-4-2.

2.7.5. Consult with installation medical services for information on lactating personnel issues, cleaning requirements, expressed milk storage, or any other associated medical issues that may arise when establishing or maintaining a lactation area.

2.8. Immediate Supervisors of Lactating Personnel will:

2.8.1. Provide lactating personnel time to utilize the lactation area and transport expressed milk to a storage location, as needed, while balancing work schedules.

2.8.2. If accommodations in accordance with this publication are temporarily unavailable due to space limitations, immediate supervisors will provide alternate reasonable accommodations to lactating personnel, until such time there is no longer a need, or a space has been identified within the office as required by the *Pump for Nursing Mothers Act*.

2.9. Lactating Personnel:

2.9.1. Should identify the need for lactation accommodations through normal supervisory or TDY chain of command authorities to ensure commanders can comply with requirements in **Chapter 3**.

2.9.2. Must provide their own pump equipment and hygiene cleaning materials.

2.9.3. May utilize Inspector General complaint resolution processes outlined in DAFI 90-301, *Inspector General Complaints Resolution*, if accommodations are not provided in accordance with this publication.

2.9.4. Lactating personnel are still required to complete assigned work. They should work with their supervisor to develop a plan to accomplish work not completed while expressing milk.

2.9.5. Lactating personnel may request an optional Medical Qualification Exam through Public Health in accordance with Department of the Air Force Manual (DAFMAN) 48-146, *Occupational Health Program Management.*

Chapter 3

LACTATION AREAS AND STORAGE OF EXPRESSED MILK

3.1. Establishing a lactation area:

3.1.1. A lactation area can be permanent or temporary, depending on the unit's circumstances and personnel needs. Temporary or flexible space can be available offices, conference rooms, wellness rooms, break rooms or other rooms which meet criteria identified within **Chapter 3.** Temporary area use should be limited as on-demand access to the lactation area is required. Consideration should be given to the number of lactating personnel and their work schedules to determine whether more than one area should be designated or created. **(T-1)**

3.1.2. When establishing the location of the lactation area, consideration should be given to the obligation to provide personnel with a reasonable break time to express milk. Units within the same building complex or in buildings that have entrances within 100 feet of each other should make every effort to share lactation areas, thereby consolidating lactation area space (and unit equipment) requirements. Exceptions permitted for unmitigated circumstances. **(T-1)**

3.1.3. Establish organizational rules and procedures for scheduling and/or utilization, to include maintenance and cleaning, of lactation areas for lactating personnel. **(T-3)**

3.1.4. Lactating personnel will initiate the request process with servicing security official if requiring the use of an electronic medical device (e.g., Bluetooth-enabled breast pump) within a secure space.

3.1.5. A lactation area must:

3.1.5.1. Meet the requirements of UFC 1-200-01, paragraph 1-4.2.

3.1.5.2. Be private and lockable from the inside. **(T-0)** If a lactation area is configured for multiple users, the area will be configured so each user has privacy. **(T-1)** Privacy for each user in a space with multiple users may be achieved by use of portable partitions, curtains, or other similar space-separating equipment or material.

3.1.5.3. Remain clean and sanitary. **(T-0)** The rooms should be cleaned as often as are restrooms.

3.1.5.4. Not be located in a restroom, to include shower rooms and locker rooms. **(T-0)**

3.1.5.5. Contain a trash can, paper towels, disinfectant wipes, and appropriate cleaning supplies made available by the unit. **(T-1)**

3.1.5.6. Be within three minutes walking distance to a source of hot and cold water for hand washing/pump cleaning. **(T-1)** Water source is not recommended to be in a restroom due to possibility of contaminants.

3.1.5.7. Contain multiple electrical outlets within the room for use of pumps. **(T-0)**

3.1.5.8. Have comfortable seating (e.g., an ergonomic desk chair, couch, or recliner) and a table or similar flat surface, other than the floor, to place the pump and other supplies. Furniture items will be in good condition. **(T-0)** The area(s) must also have good lighting, a capability to maintain a comfortable temperature, and proper ventilation. **(T-0)** Clothing

hooks may be added to aid lactating personnel with a place to hang outer clothing or workplace garments, and soundproofing may be installed.

3.1.5.9. Include a refrigerator provided for milk storage. **(T-0)** Ideally, the refrigerator will be dedicated to supporting lactating personnel and be located within the lactation area. At a minimum, however, it will be near the lactation area and may be for communal use.

3.1.5.10. Be cleaned on a routine basis in accordance with work center processes if a communal work center refrigerator is used. **(T-2)**

3.2. Units with industrial work settings: Identify and maintain lactation areas consistent with direction for break rooms per DAFMAN 91-203, *Air Force Occupational Safety, Fire, and Health Standards*.

3.2.1. Lactation areas will not contain toxic materials, chemicals, or industrial shop contaminants. **(T-1)**

3.2.2. Lactating personnel using a lactation area should adhere to the same industrial hygiene practices as a break room by removing personal protective equipment, changing clothes when contaminated with solvents, lubricants, or fuels prior to entry, and washing their hands prior to using the lactation area.

3.2.3. Air Force Public Health will inspect lactation areas in industrial workplaces as part of the normal industrial workplace inspection or at the request of the Commander. **(T-1)**

3.3. Lactation breaks:

3.3.1. Lactating personnel will be afforded adequate time to nurse or express milk regardless of the age of the child. **(T-1)**

3.3.2. Lactation breaks must be accommodated at least every two to three hours and for the length required by the lactating individual (not less than 30 minutes) each break. **(T-1)**

3.3.3. A child beginning to eat solid foods does not negate an individual's need for lactation breaks. **(T-1)**

3.3.4. Break times for US government lactating employees to express milk will be in accordance with DoD Instruction (DoDI) 1400.25V610_DAFI36-152, *Hours of Work and Holiday Observances.*

3.4. Temporary duty travel (TDY):

3.4.1. Refer to DAFI 36-2110, *Total Force Assignments* for post-birth TDY deferment guidance.

3.4.2. If supporting TDY lactating personnel at the installation, commanders must provide refrigeration and freezer storage units for expressed milk. **(T-1)**

3.4.3. Storage of milk in a refrigerator or freezer (e.g., any unit used in whole or part to store food or beverage other than breastmilk) while TDY:

3.4.3.1. Milk will be placed in a sealable package (e.g., bag, bottle, etc.) labeled with the individual's name, unit, contact information, and date of milk expression. **(T-1)**

3.4.3.2. Milk should be contained and labeled by lactating personnel to avoid contamination by other items located in the vicinity. Information regarding milk storage is

available on the Centers for Disease Control and Prevention (CDC) web page at: **https://www.cdc.gov/breastfeeding/breast-milk-preparation-and-storage/handling-breastmilk.html**.

3.4.3.3. When it appears expressed milk may have been inadvertently left behind, personnel responsible for the facility in which it was stored under TDY conditions will make every effort to contact lactating personnel and obtain their decision on disposition. **(T-1)**

3.4.4. Recommended locations to store expressed milk during TDY include, but are not limited to: lactation area refrigerators, lodging guest room refrigerators for lodging guests, schoolhouse refrigerators, or field kitchens.

3.5. Field training and exercises:

3.5.1. If supporting lactating personnel for field training and exercise, commanders must determine whether milk storage or transportation of expressed milk can be done safely. **(T-1)**

3.5.2. If lactation accommodations that meet the requirements of this regulation are not readily available for field training or exercises, commanders will explore all reasonable efforts to establish them or excuse the lactating personnel. **(T-1)**

3.5.2.1. Lactating personnel may waive the requirements of this regulation in writing to participate.

3.5.2.2. Commanders should consider the criticality of the training or exercise to mission readiness before a waiver to lactation accommodation is sought or approved.

3.5.2.3. Lactating personnel who, in collaboration with their commander, choose to attend a field training without the full lactation accommodations will still be afforded the same time and space to express milk with the intent to maintain lactation supply as desired (e.g., when accommodations for milk storage and/or transport are not available, members will still be afforded the opportunity to pump and discard milk to maintain supply). **(T-1)**

3.5.3. Attendance of lactating personnel in field training or exercises requires careful consideration to balance individual needs with mission requirements. Commanders, in consultation with the member and relevant medical personnel, will determine feasibility based on the following:

3.5.3.1. The time lactating personnel are given to express milk must include additional time, if needed, to transport milk to a storage location. **(T-1)**

3.5.3.2. Ensure lactating personnel have a clean, private space, specifically not a restroom or latrine, in which to nurse or express milk. **(T-1)**

3.5.3.3. With the consent of all lactation area users and provided adequate space exists, more than one lactating person may utilize the lactation area at one time under field or exercise conditions.

3.5.3.4. Field lactation shelters can be purchased to provide private, temporary lactation areas for lactating personnel (e.g., tent or pod).

3.5.3.4.1. Recommended shelter kit items include chair, table, lighting, mini refrigerator/electric cooler, milk transport container if milk storage is not co-located

with lactation shelter, temperature regulation options (e.g., heater or cooling system/portable fan), portable power station/generator, and extension cord.

3.5.3.4.2. Shelter areas should still meet **paragraph 3.1** requirements unless expressly waived in writing (e.g., memorandum or email) by the lactating member.

3.6. Dynamic TDY: Lactating personnel who are tasked with engaging in dynamic TDYs, as defined in this instruction, will be provided accommodations in accordance with the following guidelines to support the added physical and logistical demands that self-identified dynamic TDY members may experience. **(T-1)**

3.6.1. Mission planning will include appropriate breaks for lactating personnel to express in accordance with **paragraph 3.3**. **(T-1)**

3.6.1.1. Scheduling will include additional personnel according to career field specific requirements. **(T-1)**

3.6.1.2. Aircrew should plan for augmented crew in accordance with AFMAN 11-202v3, *Flight Operations.*

3.6.1.3. Limit working hours to less than 16 consecutive hours to allow for appropriate sleep. **(T-1)**

3.6.2. Storage of milk in a refrigerator or freezer (e.g., any unit used in whole or part to store food or beverage other than breastmilk) during a dynamic TDY will be in accordance with **paragraph 3.4.3**.

3.6.3. If shipping or transportation of expressed milk is not feasible, the dynamic TDY will be limited to a maximum of four duty days unless expressly waived in writing (e.g., memorandum or email) by the member. **(T-1)** A service member may waive this for each TDY occurrence.

3.6.4. The Joint Travel Regulations (JTR) authorize reimbursement for expenses incurred by Service members and civilian employees transporting expressed human breast milk while on TDY travel. Members and commanders must be aware of these entitlements and utilize unit funds to provide authorized resources. **(T-1)**

BRIAN L. SCARLETT, SES, DAF
Principal Deputy Assistant Secretary of the
Air Force for Manpower and Reserve Affairs

Terms

Dynamic TDY—a TDY that is inconsistent and unpredictable, subject to change mid-mission execution, and involves rigorous or extended activity during mission execution.

Expressed Milk—milk that has been removed from the lactating individual and stored for later use to feed a baby.

Lactation—the expression of milk by the mammary glands (Oxford Dictionary). The term lactation refers to "breastfeeding," "nursing," "pumping," and "hand expression."

Lactation Area—a private, secure (lockable from the inside) and clean area, other than a restroom, in the immediate vicinity of unit facilities or temporary workstation that is available to meet the needs of lactating personnel to express human milk.

Nurse—the act of a child directly feeding from a lactating individual.

Personnel—refers to all Total Force Airmen and Guardians, including US government civilian employees.

OFFICE OF THE UNDER SECRETARY OF DEFENSE FOR PERSONNEL AND READINESS POLICY MEMORANDUM

Figure A2.1. Office of the Under Secretary of Defense for Personnel and Readiness Policy Memorandum

OFFICE OF THE UNDER SECRETARY OF DEFENSE
4000 DEFENSE PENTAGON
WASHINGTON, D.C. 20301-4000

NOV - 1 2016

MEMORANDUM FOR: SEE DISTRIBUTION

SUBJECT: Department-Wide Policy for Nursing and Lactation Rooms

On January 29, 2016, the Secretary announced a series of family-focused initiatives as part of the Department of Defense's Force of the Future effort. One of these reforms addressed a lack of facilities within the Department for mothers to express breast milk in a private space. This memorandum provides guidance for nursing and lactation rooms for use by Service members as well as for civilians on military installations and in Department of Defense facilities.

Commanders and civilian supervisors at military installations and Department of Defense facilities are encouraged to review the Office of Personnel Management *Guide for Establishing a Federal Nursing Mother's Program* (available at https://www.opm.gov/ policy-data-oversight/worklife/reference-materials/nursing-mother-guide.pdf), and to implement best practices for creating a successful nursing mother's program, consistent with the demand of the workplace and the needs of the mission.

Military installations and Department of Defense facilities should feature a clean, private space (which can be temporary, depending on the unit's or agency's circumstances and Service member/employee needs) for use by nursing mothers. A nursing room may not be space set aside within a restroom and may not be in direct proximity to restroom stalls, but may be in a space adjacent to a restroom that utilizes a common entrance. The room should include a place to sit and a flat surface, other than the floor. Additionally, each nursing room should have adequate temperature control and lighting, be equipped with electrical outlets and furniture (ideally, at least one comfortable chair and one table or similar flat surface other than the floor, on which mothers can place their breast pump and other supplies), and be within a reasonable distance of clean, hot and cold running water for washing hands and cleaning lactation equipment. Each room must have a door locking mechanism that permits locking from the inside.

Consistent with workplace demands and needs of the mission, commanders and supervisors should ensure that Service members and civilian employees have adequate time to breastfeed or express milk, recognizing that each person's situation is unique. When and where possible, commanders and supervisors will provide Service members and civilian employees with reasonable lactation breaks, for a period of at least one year after a child's birth.

If the requirements of field training and exercises permit, commanders should ensure that Service members have a clean, private space, specifically not a restroom or latrine, in which to pump breast milk. A geographic combatant commander may exclude operational areas in his or her area of responsibility from compliance with this policy, should the mission require.

Figure A2.2. Office of the Under Secretary of Defense for Personnel and Readiness Policy Memorandum (continued)

Installation commanders may exercise discretion to ensure that the location, number, and availability of nursing rooms are adequate to meet the need, consistent with the mission. Additionally, the Secretaries of the Military Departments may provide additional guidance related to the physical distribution of nursing and lactation rooms at installations under their control.

Where nursing rooms are employed, the Secretaries of the Military Departments will ensure their Service members and civilian employees at such locations are educated on the requirements of this memorandum, as appropriate. Applicable policy references, issuances, and instructions also will be updated as necessary to reflect the requirements of this memorandum.
