MEMORANDUM FOR DISTRIBUTION TO ANG FORCE SUPPORT UNITS

FROM: NGB/A1XS

SUBJECT: Air National Guard 36-100 Guidance Memorandum Establishing *A1 Domestic Operations (DOMOPS) Management Controls*.

By Order of the Director of the Air National Guard (DANG), this Guidance Memorandum is the first instance of a to-be published NGB Domestic Operations (DOMOPS) publication. This publication is implementing DAFI36-3802, *Force Support Readiness Programs*, 14 January 2026. Compliance with this memorandum is mandatory. In accordance with Department of the Air Force Instruction (DAFI) 90-160, *Publications and Forms Management*, when instructions in this memorandum conflict with other National Guard Bureau or Air National Guard publications, this memorandum takes precedence.

This guidance is applicable to Air National Guard Force Support (FS) units. It provides guidance for A1 DOMOPS capabilities management. National Guard Bureau A1 oversees and manages three exclusive capabilities in support of Homeland Defense operations. These are the Disaster Relief Mobile Kitchen Trailer (DRMKT), Expandable Single Pallet Expeditionary Kitchen (E-SPEK), and the Fatality Search & Recovery Team (FSRT).

FS DOMOPS capabilities are primarily focused on supporting local, state, and national emergencies, including Disaster Response & Humanitarian Assistance (DR/HA). These operations occur within the continental U.S. (CONUS) and its territories (OCONUS), such as Alaska, Hawaii, Guam, Puerto Rico, and the Virgin Islands. Executing these missions provides a real-world environment that sharpens military contingency and crisis response skills.

NGB/A1X ensures ANG Services capabilities (DRMKT, E-SPEK, and FSRT) are postured and funded effectively to support homeland missions, disaster response, and other Defense Support to Civil Authorities (DSCA) operations. Ensures A1 DOMOPS capabilities are tracked and reported on the NGB Unified Command Platform (UCP) Web Emergency Operations Center (WebEoC). FS units may track DOMOPS training requirements in the Automated Readiness Information System (ARIS).

A1X domestic operations program managers ensure teams are properly trained, equipped, and prepared to support operations involving mass beddown (feeding) and fatality missions. Consolidates and distributes after-action reports to senior leadership as appropriate. Serves as the primary representative for governmental and non-governmental agencies. When notified, informs leadership of all deployment/redeployment of assets.

NGB/A1X domestic operations managers maintain tracking responsibility of all ANG A1 DOMOPS capabilities. A1X tracks activation of people and equipment via the NGB Unified Command Platform (UCP), WebEOC, or as directed by senior leadership. The unit's representative, ideally the Unit Deployment Manager, must notify NGB/A1X at ngb.a1xs.sustainmentservices@us.af.mil within 24 hours of a formal tasking from a Higher Headquarters (HHQ). The notification message should include capability activated, number of personnel, mission overview with date and location (if known), and mission type order.

A1X maintains oversight of the Fatality Search and Recovery Team Working Group (FSRT WG). Ensures FSRT Standard Operating Procedures (SOP) and other policies are reviewed and updated biennial or as needed. Coordinates with NGB Joint Staff on all National Guard CBRN Response Enterprise (NGB CRE) equities. Oversee the FSRT Observer Controller/Trainers (OC/T). OC/Ts are responsible for assessing training, equipment readiness, and program compliance when evaluating team performance during Collective Training Exercises (CTE) and External Evaluations (ExEval) and lead instructors for the FSRT community. To be eligible for OC/T duty an individual must be a 38F or 3F1 member of a Force Support Squadron that possesses an FSRT Unit Type Code (UTC).

The FSRT WG are unit representatives that meet yearly to discuss Doctrine, Organization, Training, Material, Leadership and Education, Personnel, Facilities and Policy (DOTmLPF-P) issues and recommend corrective actions. FSRT WG provides an after-action report to NGB/A1X NLT 30 days after the completion of each session. FSRT operates in two main categories; as an element of the National Guard CBRN Response Enterprise (NG CRE) for CBRN incidents or as a stand-alone team for non-CBRN incidents. This capability includes timely and dignified search, recovery, interim processing of remains, preservation of forensic integrity, limited transportation, and may assist in temporary interment of contaminated remains.

While on NG CRE direction the FSRT should support the Incident Commander's (IC) Incident Action Plan (IAP) mission objectives as determined by the military chain of command. As a stand-alone, FSRT may support federal or state when requested, and when so authorized by the proper authority for disaster response primarily for a non-contaminated environment. Regardless of type of operation, FSRT reports to the on-scene military chain of command. Units must submit an After-Action Report for any real-world activation NLT 30 days.

Members on FSRT mission should have a pre- and post-resiliency-focused briefing with a mental health professional and NLT 30 days after re-deployment or as deemed necessary by a mental health professional or commander. In non-CBRN, non-technical environment, FSRT may be augmented to search and recover remains by FSS search and recovery (S&R) members. Members should maintain proficiency in the execution of their duties in accordance with the UTC Mission Capability Statement, Mission Essential Task, NG CRE Individual Training Readiness Matrix (ITRM), and vehicle training requirements (applies to trailers). In addition, members should maintain currency on the primary skill level as described in the 3F1X1 Career Field Education and Training Plan (CFETP) and attend the FSRT 101 (facilitated by NGB/A1XS). Contact NGB/A1XS for course availability at NGB.A1.FSRT_Org@us.af.mil.

Field feeding platforms serve as the initial bridge to sustain disaster relief efforts in response to a request for assistance from civil authorities for domestic activities, emergencies or from qualifying entities for special state or national events. Furthermore, it serves as a training platform to meet 3F1X1 Air Force Specialty Code (AFSC) upgrade training, Home Station Readiness Training (HSRT), and sustain Air Expeditionary Wing readiness.

Units are authorized to utilize feeding platforms for local, state, national, Combat Readiness Training Center/Range, Innovative Readiness Training, NGB or MAJCOM, and Wing readiness exercises. The requestor is responsible for acquiring the desired subsistence/rations for the operation. Disaster Relief Mobile Kitchen Trailer (DRMKT) is a versatile feeding platform capable of serving both operational and fresh rations, seamlessly transitioning between the two without needing to switch equipment. It is highly mobile and can be transported by truck for ground-based operations. Additionally, when compliance with the Air Transportability Test Loading Agency (ATTLA) certification, it allows for immediate air transport, ensuring rapid deployment.

DRMKT may support field feeding of forces during natural disasters and other domestic incidents. Prior to deployment of assets identify any limiting factors, like road accessibility, based on the geographically affected location. A site survey, if feasible, should be conducted to determine the level of support for water, gray water, electrical, etc. Capable of preparing the entire variation of Unitized Group Rations (UGR) Heat and Serve, cooked-chilled, boil-in-the-bag products, or any type of fresh food.

DRMKT is transported by any 650-class or greater, 1 to 2-½ ton vehicle capable of towing at least 15,600 lbs. A box truck is not approved as prime mover. Units should coordinate prime mover requirements with the local vehicle management office. At least 2 3F1X1 should be trained as drivers and meet local driving requirements.

Expandable Single Pallet Expeditionary Kitchen (E-SPEK) provides a rapid deployable, single pallet position, sling capable, field feeding platform to support fresh and operational rations. The primary function of this platform is to enable initial or sustain airfield feeding. Any 3F1 that will operate an E-SPEK or DRMKT should train annually on set up, sustainment, and tear down the platform in accordance with the equipment operating manual. This action should be documented in the Defense Readiness Reporting System under the mission assessment tab for the corresponding Mission Essential Task (MET).

Members assigned to feeding platforms should be current on Home Station Readiness Training and follow the NGB/A1XS food handler policy. Training documentation should be accomplished through ARIS. NGB/A1XS offers yearly training courses for DRMKT, E-SPEK, and Food Managers. Contact A1XS for the current training list of Skill Enhancement Course (SEC) at NGB.A1XS.SustainmentServices@us.af.mil.

Home station training should include equipment setup, operations, teardown procedures, preventive maintenance checks and services, food safety and sanitation, operational rations handling, generators and fuel handling, and operational risk managements principles. For food service accounting procedures follow DAFMAN 34-131, Appropriated Fund (APF) Food Service Program Management. Any proficiency related question may be directed to ANG 3F1 CFM.

Ensure all records generated as a result of processes prescribed in this publication adhere to Air Force Instruction (AFI) 33-322, *Records Management and Information Governance Program*, and are disposed in accordance with the Air Force Records Disposition Schedule which is located in the Air Force Records Information Management System.

This memorandum becomes void after one year has elapsed from the date of this memorandum, or upon publishing of a new publication permanently establishing this guidance, whichever is earlier**.**

RANDAL K EFFERSON, Major General, USAF
