Abbreviations and Terms Explained **74**

SUMMARY OF CHANGES: This document reflects substantial revisions to the CFETP and requires comprehensive review. A key modification is the adoption of the Occupational Competency Model (OCM) for evaluating trainee proficiency, shifting the focus from task-based performance to demonstrable understanding and capability in mission accomplishment. Initial skills training will emphasize scenario-based learning, simulating operational environments to prepare personnel for real-world applications. Subsequent training, including all courses and curricula, will be aligned with the OCM to ensure competency-driven development

AEROSPACE PHYSIOLOGY
AFSC 1H0X1
CAREER FIELD EDUCATION AND TRAINING PLAN

PREFACE

1. This Career Field Education and Training Plan (CFETP) is a comprehensive education and training document that identifies life-cycle education/training requirements, training support resources and minimum core task requirements for the Aerospace Physiology specialty.

2. The CFETP consists of two parts; both of which are used by leadership to plan, manage, and control training within the career field.

2.1. Part I provides information necessary for overall management of the specialty.

Section A, General Information explains how certifiers, trainers, trainees and specialty courses will use the plan.

Section B, Career Field Progression and Information identifies career field progression, duties and responsibilities, training strategies, and career field path.

Section C, Skill Level Training Requirements associates each skill level with specialty qualifications (knowledge, education, training, and other).

Section D, Resource Constraints lists deficiencies in resources needed to accomplish the training mission, such as funds, manpower, equipment, and facilities. *Note*: The *Air Force Enlisted Classification Directory* (AFECD) contains the specialty descriptions.

Section E, Identifies transition training guide requirements for SSgt through MSgt and other Senior Noncommissioned Officers as required by the CFM.

2.2. PART II includes the following:

Section A, Specialty Training Standard (STS) includes duties, tasks, technical references to support training, Air Education and Training Command (AETC) conducted training, wartime course, core tasks, and correspondence course requirements.

Section B, Course Objective List identifies the standards supervisors will use to determine if Airmen satisfy training requirements.

Section C, Support Materials identifies available support materials. An example is a Qualification Training Package (QTP), which may be developed to support proficiency training.

Section D, Training Course Index is a tool that supervisors can use to determine if resources are available to support training. Included here are both mandatory and optional courses.

Section E, Major Command (MAJCOM) unique requirements identify specific requirements supervisors can use to determine if additional training is required for the associated MAJCOM unique qualification needs.

Section F, Technical References is a tool which cites current and accurate technical references vital to attaining additional knowledge for the trainee, the development of training programs, career development course (CDC) material and specialty knowledge test (SKT) references.

SECTION A - GENERAL INFORMATION

1. PURPOSE. This CFETP provides the information necessary for Career Field Managers (CFM), MAJCOM Functional Managers (MFM), commanders, Unit Training Managers (UTM), supervisors and trainers to plan, develop, manage, and conduct an effective and efficient career field training program. The plan outlines the training individuals in this Air Force specialty should receive to develop and progress throughout their career. This plan identifies initial skills, upgrade, qualification, advanced and proficiency training. Initial skills training is the Air Force specialty specific training an individual receives upon entry into the Air Force or upon retraining into this specialty for award of the 3-skill level. Normally, this training is conducted by AETC at one of the technical training centers. Upgrade training identifies the mandatory courses, task qualification requirements, and correspondence course completion requirements for award of the 3-, 5-, 7-, 9-skill level. Qualification training is actual hands-on task performance training designed to qualify a member in a specific duty position. This training program occurs both during and after the upgrade training process. It is designed to provide the performance skills and knowledge required to do the job. Advanced training is formal specialty training used for selected service members. Proficiency training is additional training, either in-residence or exportable advanced training courses, or OJT provided to personnel to increase their skills and knowledge beyond the minimum required for upgrade. The CFETP has several purposes, some are:

1.1. Serves as a management tool to plan, manage, conduct, and evaluate a career field's training program. Also, it is used to help supervisors identify training at the appropriate point in an individual's career.

1.2. Identifies task and knowledge training requirements for each skill-level in the specialty and recommends education and training throughout each phase of an individual's career.

1.3. Lists training courses available in the specialty, identifies sources of training, and the training delivery method.

1.4. Identifies major resource constraints that impact full implementation of the desired career field training process

2. USES. The plan is used by MFMs and supervisors at all levels to ensure comprehensive and cohesive training programs are available for everyone in the specialty.

2.1. Training personnel will develop and revise formal resident, non-resident, and training based on requirements established by the user and documented in Part II of the CFETP. The Lead Command MFM will coordinate with the CFM to develop acquisition strategies for obtaining resources needed to provide the identified training.

2.2. MFMs will ensure their training programs complement the CFETP mandatory initial and upgrade skills requirements. Identified requirements can be satisfied by OJT, resident training, contract training, or ancillary courses. MAJCOM-developed training to support this AFSC must be identified for inclusion in this plan and must not duplicate available training resources.

2.3. Each individual will complete the mandatory training requirements specified in this plan. The list of courses in Part II will be used to provide guidance to support training.

3. COORDINATION AND APPROVAL. The CFM is the approval authority. MAJCOM Functional Managers and AETC training managers will identify and coordinate through proper channels all initial and subsequent changes to the career field training requirements. The CFM will initiate an annual review of this document and coordinate with AETC and designated members of the STRT to ensure currency and accuracy. Using the list of courses in Part II, they will eliminate duplicate training. Send applicable inputs/changes to this CFETP through MAJCOM Functional Managers to HQ USAF/A34P, Attn: Career Field Manager, 1H0X1, 1480 Air Force Pentagon, Washington D.C. 20330-1480 or the following organizational email address: AF.A34P.Workflow@us.af.mil. All current waivers/exception to policy memorandums can be found on the HAF AP SharePoint page: https://usaf.dps.mil/sites/AerospacePhysiology/HAFAP/SitePages/Home.aspx.

3.1. **Waivers.** The CFM, Aerospace Physiology (1H0X1) is the waiver authority for this CFETP. IAW DAFMAN 36-2689 and DAFMAN 36-2100, the CFM is the waiver authority for all training outlined in this CFETP. All waiver requests must be routed through the appropriate training chain of command to the CFM for final adjudication.

SECTION B - CAREER PROGRESSION AND INFORMATION

4. SPECIALTY DESCRIPTION. The specialty description is composed of two sections; the specialty summary and the duties and responsibilities found in the AFECD.

4.1. Specialty Summary. Manages physiological functions and activities. Performs in-flight duties as a non-career enlisted aviator (non-CEA). Performs aircrew functions and other mission specific qualification in-flight duties to include the airdrop of personnel and equipment/cargo. Operates and monitors aircrew breathing systems and personnel oxygen systems. Develops a thorough understanding of human factors principles and fundamentals, analytic methods and techniques, performance processes, system design, sensation and perception, and cognitive psychology. Operates and maintains aerospace physiology training devices including, but not limited to, altitude chambers, spatial disorientation trainers, reduced oxygen breathing devices (ROBD), centrifuge, and other related training equipment. Additionally, where SERE personnel are unavailable, may operate equipment such as lateral drift and swing landing trainers to conduct parachute landing fall training. Instructs and observes personnel on/for physiological symptoms on simulated flights to altitude. Instructs in a classroom and manages Aerospace Physiology assets. Trains flying/non-flying personnel in subjects related to physiology, human factors, and aviation safety. Other areas of responsibility include High Altitude Airdrop Mission Support (HAAMS), High Altitude Intelligence Surveillance and Reconnaissance (HAISR) support program, personal parachute program participation, parachute familiarization training, Aerospace Physiology team training, and fighter aircrew acceleration training. The hazards of high altitude and the dynamic mission and training environment demand a high degree of attention, focus, professionalism, knowledge, skill, discipline, coordination, and stress management to successfully and safely carry out related duties. Related DoD Occupational Subgroup: 132400.

4.2. Duties and Responsibilities.

4.2.1. Conducts classroom, laboratory, and operational training.

4.2.2. Plans, organizes, directs, and conducts Aerospace Physiology training activities.

4.2.3. Determines training schedules according to course control documents, directives, policies, and instructional principles.

4.2.4. Uses lecture, demonstration and performance, guided discussion, case study, and time and circumstance instructional methodology.

4.2.5. Provides instruction on the following subjects: introduction to human factors in aviation, physiological effects of altitude, performance threats, aircrew breathing systems, cabin pressurization and decompression, pressure breathing, vision, unaided night vision, theory of operation for night vision devices, spatial disorientation, sensory illusions, noise and vibration, principles of CRM, attention management threats to SA, acceleration, physiological considerations of aircraft egress and high altitude escape, Barany chair, altitude chamber, ROBD lecture, exposure to thermal burden, and various in-flight oxygen emergencies.

4.2.6. Briefs students on proper parachute landing fall (PLF) techniques and instructs swing landing trainer/lateral drift trainer procedures.

4.2.7. Instructs students in use of oxygen masks, full-pressure suits, antigravity suits, flight clothing, emergency and portable oxygen systems, night-vision goggles, and other high altitude protection equipment.

4.2.8. Instructs and supervises students in fitting, adjusting, and maintaining breathing systems and other personal equipment, and use of oxygen regulators, ejection seats, and crew worn equipment.

4.2.9. Conducts lectures, discussions, and demonstrations to indoctrinate flying, parachuting and non-flying warfighters on physical and physiological stresses and human performance implications of military aviation, and worldwide deployment environments.

4.2.10. Administers tests on physiology topics covered in lectures and trainer indoctrination.

4.2.11. Emphasizes the application of human factors principles with real-world scenarios and environments.

4.2.12. Develops and implements programs designed to enhance safety, mission effectiveness, and provide just-in-

time training to aircrew and support personnel on human performance/human factors issues.

4.3. Non-Career Enlisted Aviator (non-CEA):

4.3.1. Establishes, supervises, and directs AP non-CEA training program.

4.3.2. Evaluates non-CEA activities ensuring compliance with technical manuals, regulations, and work standards.

4.3.3. Serves on or directs flight inspection teams to evaluate in-flight duties and operational programs.

4.3.4. Plans, organizes and coordinates flight activities with flying organizations.

4.3.5. Directs standardization of physiological duties and ensures conformance with prescribed aircrew procedures.

4.3.6. Inspects and evaluates in-flight Aerospace Physiology activities.

4.3.7. Interprets and discusses evaluation findings and recommends action to correct deficiencies.

4.3.8. Advises organizational commander or staff agencies on status of physiological activities and adequacy of equipment.

4.3.9. Maintains universal aircraft qualification.

4.3.10. Primary Flight Duties:

4.3.10.1. Human Factors Consultation. Assist aircrew and, when appropriate, instruct aircrew in the pre-mission briefing with the unique physiological and human factors demands of flight during mission profiles.

4.3.10.2. Crew Resource Management/Threat and Error Management. Assist aircrew with challenges associated with crew resource/threat and error management objectives in-flight and, when appropriate, debrief observations to aircrew and instruct mitigation strategies.

4.3.10.3. Human Systems Integration. Instruct aircrew on aircraft primary and emergency backup oxygen systems, as well as integration of aircrew flight equipment. When appropriate, debrief aircrew on human performance issues associated with human systems integration of oxygen systems.

4.3.10.3.1. Provide Operational Safety, Suitability, and Effectiveness (OSS&E) lessons learned to existing aircrew training platforms and human systems integration.

4.3.11. Routinely accesses classified material in performance of duties.

4.3.12. Individuals selected for the AP career field, inherently volunteer to enter qualification training to perform in-flight duties in an aircraft as non-rated aircrew members.

4.3.13. Individuals selected for the AP career field, inherently volunteer to enter qualification training to perform parachutist duties.

4.3.14. Pre- and Post-Flight Briefings. Participate in pre-flight mission planning briefings and post-flight debriefings to address human factors, physiological threats, and mission-specific human performance risks.

4.4. High Altitude Airdrop Mission Support (HAAMS):

4.4.1. Conducts cargo and personnel airdrops according to directives.

4.4.2. HAAMS Pre- and Post-Flight Briefings. Conduct and participate in specialized pre-mission HAAMS briefings and post-mission debriefings to coordinate oxygen profiles, threat and error management, and physiological emergency protocols.

4.4.3. Operates aircrew and parachutist breathing systems and supervises aircrew and personnel for signs and symptoms of physiological impairment.

4.4.4. Inspects, operates, and maintains HAAMS oxygen equipment.

4.4.5. Deploys and supports alerts in support of higher-headquarter directed requirements.

4.5. High Altitude Intelligence Surveillance and Reconnaissance (HAISR) Support:

4.5.1. Fits, inspects, operates and maintains full pressure suits, survival kits and associated equipment and support associated flight operations.

4.5.2. Deploys and supports alerts in support of worldwide ISR requirements.

4.6. Aviation Safety:

4.6.1. Performs and assists in mishap investigations, prepares reports, and maintains records.

4.6.2. Gathers and analyzes mishap data, identifies causes, recommends corrective actions and develops training to prevent future mishaps.

4.6.3. Performs/assists as human factors consultant for flight, occupational, weapon, and space mishap boards.

4.6.4. Interacts with flight medicine, wing safety and other base agencies as human factors consultant.

4.6.5. Utilizes the Air Force Safety Automated System (AFSAS) for promoting mishap prevention programs for all aviation assets and through the establishment of proactive aviation safety programs.

4.6.6. Utilizes the Sleep, Activity, Fatigue and Task Effectiveness- Fatigue Avoidance Scheduling Tool (SAFTE FAST) for predicting fatigue in aircrew pairing, rosters, and day-of operations schedules.

4.7. Parachute Qualified Personnel:

4.7.1. Serves as SME for emergency parachuting techniques in support of high-altitude parachutists, Undergraduate Flying Training, and Aerospace Physiology Aircrew Training.

4.7.2. Performs static line and/or military free fall duties.

4.8. Centrifuge:

4.8.1. Operates the centrifuge to conduct initial and refresher acceleration training for fighter aircrew and other high-G aircraft operators.

4.8.2. Monitors and evaluates aircrew for signs and symptoms of G-induced loss of consciousness (G-LOC) and other physiological effects of acceleration.

4.8.3. Instructs and coaches personnel on the proper performance of the anti-G straining maneuver (AGSM) and other countermeasures to increase G-tolerance.

4.8.4. Conducts pre- and post-flight inspections, maintenance, and operational checks of the centrifuge device and associated life support systems IAW technical orders.

4.8. General AP Technician Duties:

4.8.1. Schedules and operates altitude chambers to simulate changes in barometric pressure experienced in flying.

4.8.2. Operates spatial disorientation devices to simulate sensory and visual misperceptions.

4.8.3. Operates weapon system procedural, swing land trainers (SLT) and lateral drift trainers (LDT).

4.8.4. Operates and maintains the reduced oxygen breathing device (ROBD).

4.8.5. Establishes routine storage, inspection, and maintenance procedures for aircrew flight equipment used by the physiology-training program.

4.8.6. Uses various types of test equipment to conduct reliability testing on aircrew breathing systems and oxygen regulators.

4.8.7. Observes students for signs of hypoxia, decompression sickness, and other physiological injury or illness.

4.8.8. Inspects and evaluates aerospace physiology equipment and procedural activities.

5. SKILL/CAREER PROGRESSION. A quality training and timely progression from the apprentice to the superintendent skill level plays an important role in the Air Force's ability to accomplish its mission. Everyone involved in training must do their part to plan, develop, and manage an effective training program. This part of the CFETP provides guidance to ensure individuals receive viable training at appropriate points in their career. The following narrative identifies an individual's career training path and requirements.

NOTE: This CFETP establishes the foundational baseline training for AP technicians. Further specialized, advanced, and mission-specific training requirements are delineated in applicable Air Force Manuals (AFMANs), Air Force Instructions (AFIs), MAJCOM Training Syllabi, and Ready Aircrew Program (RAP) Tasking Memorandums.

5.1. **Apprentice (3) Level.** Initial skills training in this specialty consists of a structured pipeline prior to a member's arrival at their first duty station. Upon graduating from Basic Military Training, AP personnel first attend the five-week Career Enlisted Aviator Fundamentals Course (CEAFC) located at Lackland AFB, TX. Following CEAFC graduation, members attend the two-day SV85A (Emergency Parachute and Water Survival Training) and the 10-day SV97A (Advanced Level-B SERE Skills Training). Upon completion of these survival pipelines, AP personnel attend the 3-skill level resident Aerospace Physiology Apprentice (APA) Course located at the 342 TRS at Wright-Patterson AFB, OH. The APA Course is a 79-day training program that provides students with the skills and knowledge to perform the duties identified in the STS, Part II of this CFETP.

NOTE: To optimize resources and reduce training redundancy, AP personnel will attend the same SERE courses required for C-17 SOLL II aircrew members.

5.2. Journeyman (5) Level. Upgrade training to Journeyman consists of completing the appropriate Career Development Course (CDC) and mandatory core tasks as needed for upgrade in the CFETP/Master Training Plan (see part 1 and part 2 of the CFETP). Supervisors may identify and standardize local tasks for upgrade. Additional upgrade training requirements include attendance to the USAF Night Vision Goggle Academic Instructor Course (NVGAIC) and attaining a minimum of five sorties while in UGT. To enhance their skills, AP personnel are highly encouraged to continue their education toward a Community College of the Air Force (CCAF) degree and to take certification examinations (Reference Table 4, for certification descriptions).

5.3. Craftsman (7) Level. Upgrade training to Craftsman consists of being a staff sergeant (SSgt) select and mandatory completion of core tasks as needed for upgrade in the CFETP/Master Training Plan (see part 1 and part 2 of the CFETP). Supervisors may identify and standardize local tasks for upgrade. Additional upgrade training requirements include completion of the in-resident AP Craftsman Course. The AP Craftsman Course will incorporate the Human Factors Workshop for AP professionals. An Aerospace Physiology Craftsman is expected to fill various supervisory and management positions. In addition, they develop work and training schedules for subordinate personnel and ensure necessary manning levels are always maintained during hours of operation. Personnel certified as Craftsman should take the AF Supervisor Course at the earliest opportunity. Members are highly encouraged to complete their CCAF and continue their education toward a Bachelor's or Master's degree and have a professional certification e.g. CAsP, AHP, CHFACS (Reference Table 4, for certification descriptions).

5.4. Superintendent (9) Level. Upgrade training to Superintendent consists of attaining the rank of SMSgt, qualification in and possession of AFSC 1H071, and 7-years' experience in the AFS. A 9-skill level can be expected to fill positions such as Superintendent or various staff positions. Additional training in the areas of budget, manpower, resources, and personnel management should be pursued through continuing education. While the CCAF itself is no longer required, an associate's degree or higher is mandatory for promotion to Senior Master Sergeant, according to *The Enlisted Force Structure*. Completion of a Bachelor's degree or pursuit of a Master's degree is also encouraged.

5.5. Chief Enlisted Manager (CEM, 1H000) Training Requirements. The individual will be awarded AFSC 1H000 when selected for Chief Master Sergeant.

5.6. Trainer and Certifier Requirements. Refer to DAFMAN 36-2689, *Training Program* for trainer and certifier requirements. The CFM is the waiver authority for these requirements and if the mission dictates, unit commanders will route individual waivers as needed.

6. TRAINING DECISIONS. The CFETP uses a building block approach to encompass the entire spectrum of training requirements for the Aerospace Physiology career field. The strategy outlined below details when, where, and how to meet these requirements. This ensures a modern and affordable approach that reduces training duplication, aligns with the evolving needs of the operational warfighter, and properly delineates roles by aligning ultimate operational risk with commissioned officers.

6.1. Initial Skills Training. The career field has transitioned from a legacy, chamber-focused training model to a restructured IST construct that prepares graduates for the full scope of the AP enterprise. This evolution addresses the shift in mission focus towards operational mission sets to include HAAMS, safety mishap assistance, and in-flight duties, utilizing a wide array of advanced training devices beyond the altitude chamber. IST now consists of the following mandatory courses: Career Enlisted Aviator Fundamentals Course (CEAFC), SERE Training (SV85A and SV97A), and the new 79-day Aerospace Physiology Apprentice (APA) course. This modernized initial training pipeline ensures graduates have a broader, more versatile skillset that qualifies three-level Airmen for Aerospace Physiology Technician (APT) assignments supporting 13H officers in Reduced Oxygen Breathing Device (ROBD) units, making them eligible for immediate assignment to *any* Aerospace Physiology unit across all MAJCOMs, regardless of whether it operates an altitude chamber. This approach streamlines the upgrade path, alleviates the OJT burden previously placed on a few specialized units, and provides the flexibility to meet diverse operational demands.

6.2. Journeyman Upgrade Training. Journeyman upgrade training to the 5-skill level is centered on developing a fully qualified, mission-ready Journeyman through On-the-Job Training (OJT) at their assigned unit. This distribution of UGT across the entire enterprise ensures critical manning billets are filled faster. Key mandatory requirements for the 5-level upgrade include: Completion of the 1H051 Career Development Course (CDC) and the USAF NVG Academic Instructor Course (NVGAIC). As well as completion of five sorties to develop competencies as a Non-CEA. These requirements were established to ensure 5-levels are prepared to serve as aircrew trainers and support the full spectrum of AP operational missions.

6.3. Craftsman Upgrade Training. To become a Craftsman, an Airman must complete all 3- and 5-skill level requirements and demonstrate the ability to lead and manage. The training decisions for this level focus on developing expertise in human factors and mishap investigation, which are critical to the career field's safety and mishap prevention roles. In addition to OJT, mandatory training includes: In-resident Aerospace Physiology Craftsman (APC) Course and The Human Factors Workshop for AP Professionals (embedded in the APC course). These courses are essential for preparing 7-levels to serve as subject matter experts and human factors consultants. **Note:** Aircraft Mishap Investigation Course (AMIC) and Mishap Investigation Non-Aviation (MINA) courses have been reclassified from mandatory to supplemental.

6.4. Superintendent Upgrade Training. Upgrade to the 9-skill level (Superintendent) requires completion of all 7-skill level requirements, promotion to Senior Master Sergeant and a minimum of seven years of experience in the AFS. Training at this level shifts from tactical, hands-on skills to strategic leadership and management. Airmen are encouraged to pursue advanced education and professional development opportunities to prepare them for managing programs, resources, and personnel at the MAJCOM and Air Staff levels.

6.5. Notable updates. The CFETP has undergone a considerable revision towards building a competency-based training and development platform for the Aerospace Physiology Technician career field. A significant change has been to shift the focus from task-based training to one that is more centered on outcomes-based learning. A task is a unit of work activity or operation which forms a significant part of a duty. These are singular in nature and are usually accomplished in one continuous action, which also can occur independently of other tasks. Conversely, outcomes are learning goals that typically consist of a multitude of tasks. These outcomes are actions and performances that embody and reflect the learner's competence in using content, information, ideas, and tools successfully. Focusing on learning outcomes allow organizations, leaders, supervisors, and trainers to incorporate foundational competencies and underlying characteristics (values, traits, attitudes) into learning, which is necessary for developing Airmen with the competencies needed for future challenges. The following decisions were made as a result of close coordination between HQ AETC, Technical Training, schoolhouse instructors and staff, field SMEs, functional managers and the STRT sought to develop the learning outcomes. This was accomplished by reverse engineering the behaviors found in the Aerospace Physiology Technician occupational

competency model and then by asking what does an Airman need to able to know and do in order to master a specific behavior. The intent of the learning outcomes is to identify all factors needed to succeed in attaining the behavior. Formal training will be codified by using the behavioral statement coding system for the STS as opposed to the proficiency code key. As a result, each line item will consist of a verb and the coding system for formal training will only use P (performance), K (knowledge), and pk (performance-knowledge).

7. COMMUNITY COLLEGE OF THE AIR FORCE (CCAF) CAREER FIELD PATH. The CCAF provides enlisted members the opportunity to obtain an Associate in Applied Sciences (AAS) degree. Enrollment in the CCAF occurs upon completion of basic military training. Off-duty education is a personal choice, but it is highly encouraged. See the CCAF web site for program details regarding the AAS degree at: https://www.airuniversity.af.edu/CCAF/. Additionally, see the Air Force Virtual Education Center website regarding AAS degree progress at: https://afvec.us.af.mil/afvec/dashboard. In addition to its associate degree program, the CCAF offers the following:

7.1. CCAF Instructor Certification (CIC). The CCAF offers the CCAF Instructor Certification (CIC) Program for qualified instructors who teach CCAF collegiate-level credit awarding courses at a CCAF affiliated school. The CIC is a professional credential that recognizes the instructor's extensive faculty development training, education and qualification required to teach a CCAF course and formally acknowledges the instructor's practical teaching experience. The CIC program is a three-level program consisting of three specific levels of achievement. For details on the program reference Air University website.

7.2. Instructor of Technology & Military Science Degree. This program is offered to enlisted members who are assigned to CCAF affiliated schools teaching CCAF degree-applicable courses. Reference paragraph 8 for details.

7.3. Trade Skill Certification. When a CCAF student separates or retires, a trade skill certification is awarded for the primary occupational specialty. The College uses a competency-based assessment process for trade skill certification at one of four proficiency levels: Apprentice, Journeyman, Craftsman/Supervisor, or Master Craftsman/Manager. All are transcribed on the CCAF transcript.

7.4. Degree Requirements. All Airmen are automatically entered into the CCAF program totaling 60 semester hours. The associate's degree program available from the CCAF for AFSC 1H0X1 is the Aerospace Physiology Technology (7GAN) degree. The 5-skill level must be awarded prior to nomination for graduation. A minimum of 15 semester hours of CCAF Institutional credit must be applied to graduate and can be fulfilled through Technical education, Leadership, Management and Military Science (LMMS), and/or Program Electives and the requirements in Tables 1, 2, and 3., must be met.

7.5. Technical Education (24 semester hours): A minimum of nine (9) semester hours of CCAF institutional credit awarded from specialty-related formal training must be applied toward Technical Core subject requirements. Technical Electives may be satisfied by CCAF credit or other sources in-transfer.

Table 1. Degree Requirements.

Technical Core	***Maximum Semester Hours***
Introduction to Aerospace Physiology	6
Life Support Equipment Systems	6
Hypobaric Chamber Operations	6
Instructional Methodology	6
Physiological Training Management	6
Respiratory & Circulatory Physiology	3
Survival Training	6

Table 2. Technical Electives.

Technical Elective	***Maximum Semester Hours***
CCAF Upgrade Training	15
Computer Science	6
Emergency Medicine	3
General Biology	3
General Chemistry	3
General Psychology	3

Guidance and Counseling	3
Human Anatomy & Physiology	3
Introduction to Aeronautical Science	3
Meteorology	3
Microbiology	3
Molecular and Cell Biology	3
Pre-Calculus/Calculus	6
Physics	3
Specialty-Related Subjects In-Transfer	9
Statistics	3

7.6. Leadership, Management & Military Studies (6 semester hours): Professional military education, civilian management courses accepted in transfer and/or by testing credit.

7.7. Program Elective (15 semester hours): Courses applying to technical education, LMMS or general education requirements; natural science courses meeting general education requirement application criteria; foreign language credit earned at Defense Language Institute; maximum 9 semester hours of CCAF degree-applicable technical course credit otherwise not applicable to program of registration.

7.8. General Education (15 semester hours): Applicable courses must meet the General Education Requirement (GER) subject criteria and in-transfer requirements.

Table 3. General Education.

Subjects/Courses	***Semester Hours***
Written Communication (English Composition)	3
Oral Communication (Speech)	3
Mathematics	3
Social Science	3
Humanities	3
See the *CCAF General Catalog* for details regarding the AAS degree program for this specialty.	

8. The Instructor of Technology and Military Science (ITMS) degree program. The ITMS program is available to AP personnel who are assigned or previously assigned to an instructor "T" prefix at the 342 TRS. Applicants must complete three semester hours of CCAF approved instructor methodology coursework and hold their career field related CCAF degree or equivalent civilian college degree before registration. If the instructor methodology credit earned in the apprentice course is applied to the Aerospace Physiology Technology degree, it cannot be used for the ITMS degree. Technicians have the option of using the credits for this course in either of the two degrees available. The journeyman (5) level (or fully qualified equivalent) must be held at the time of program completion. Registrants must complete the program within two years from the initial date of registration and have a documented 12 semester (180 contact hours) CCAF Teaching Internship transcribed. Twenty-four semester hours to include a minimum of 12 semester hours of technical core subjects or courses must be applied and the remaining semester hours applied from technical core or technical elective subjects or courses. Requests to substitute comparable courses or to exceed specified semester hour values in any subject or course must be approved in advance.

9. Professional Certifications. Professional credentials are those that are demanded to fulfill specific requirements identified by an authorization. The owning unit will fund the cost of the initial certifying exam, and the maintenance of the certification and recertification fee. Certifications assist the professional development of Airmen by broadening their knowledge and skills. Additionally, specific certifications may be awarded collegiate credit by CCAF and civilian colleges.

9.1. Squadron Commanders will approve unit funding/reimbursement for the examination fee and funded TDY (if indicated) for the initial examination if the eligibility requirements are met and funding is available. Squadron Commanders will not authorize reimbursements if the military has previously paid for a testing attempt for this certification/recertification or if the member has received other military or government funds for the same purpose.

9.2. Funding will only be provided for the first attempt to pass the examination. Funding will not be approved for members after a failed attempt of the same, or similar, certification or recertification. The AF will not fund

additional charges or fees incurred due to late registration.

9.3. Squadron Commanders will not provide funding to Airmen who have requested orders and/or have approved orders to retire or separate from the Regular Air Force in the next 12 months. Reimbursements may be subject to recoupment if members retire or separate prior to 12 months from funding approval.

9.4. In most instances, the Education and Training Officer or Unit Training Manager is the point of contact to assist with contacting certification agencies and to request these examinations at the duty location.

Table 4. AP certifications.

Certifying Agency	Certification/ Examination Title	Note
The council of the Aerospace Medical Association (AsMA)	Aerospace Physiology Board Certification/ Certification in Aerospace Physiology	The objectives of the certification program are: 1) To encourage the study, improve the practice, and elevate the standards of excellence in Aerospace Physiology. 2) To provide an avenue for professional and peer recognition. 3) To serve as a goal which members can strive to attain through dedication, self study, and personal contributions to the Aerospace Medical association and the Aerospace Physiology Society. https://www.aerospacephysiologysociety.org/casp
Human Factors Analysis and Classification System, Incorporated (HFACS, Inc)	Associate HFACS Professional (AHP)/AHP Exam	https://hfacs.com/certification.html
	Certified Human Factors Analysis and Classification System (HFACS) Professional (CHP)	Certified Human Factors Analysis and Classification System (HFACS) Professional 1. Submit an application for CHP certification 2. AHP designation achieved and verified by the HFACS administrator 3. Complete/submit a work product using HFACS 4. Renew certification annually Acceptable Work Products •Document completion of 10 Accident Investigations or Analyses. (Confidential information should be redacted.) • HFACS nano-codes selection based upon AF needs. • An essay detailing how you intend to implement HFACS into your AF systems and processes. •An article you have written in a professional journal regarding the use of HFACS. https://hfacs.com/certification.html
Human Systems Integration	HSI Certificate Program	To be awarded the HSI certificate, students must complete four courses as specified below. Credits for each course are indicated in parentheses. If taking one course per quarter, this program can be completed in 12 months. **Core Courses (3 courses, 12 credits):** These courses provide a common breadth of knowledge and the basic building blocks for the HSI professional. These courses include HFEN 560: Human Factors Engineering, HFEN 565: Human Systems Domains, HFEN 668: Integration of Human Considerations During Acquisition. **Electives (1 course, 4 credits):** This course provides additional depth in the human systems integration. Eligible courses include HFEN 620: Human Performance Modeling, HFEN 663: Human Computer Interaction, HFEN 665: Human-Agent Interaction and HFEN 670: Human Interaction Technologies. https://www.afit.edu/en/programs.cfm?a=view&D=47

10. Air Force Credentialing Opportunities On-Line (AF COOL). The AF COOL Program is managed by CCAF and provides a research tool designed to increase an Airman's awareness of national professional credentialing and funding opportunities available for all Air Force occupational specialties. While the professional certification program is mandated to fulfill specific mission requirements, the AF COOL program is voluntary and therefore not required. AF COOL also provides information on specific occupational specialties, civilian occupational equivalencies, AFSC-related national professional credentials, credentialing agencies, and professional organizations. AF COOL contains a variety of information about credentialing and licensing and can be used to:

- Identify civilian licensure and certification on individual credentials including eligibility requirements and resources to prepare for an exam.
- Identify licenses and certifications relevant to an AFSC.
- Learn how to fill gaps between Air Force training and experience and civilian credentialing requirements.
- Get information on funding opportunities to pay for credentialing exams and associated fees.
- Learn about resources available to Airmen that can help them gain civilian job credentials.

to learn more about AF COOL and funding processes, visit https://afvec.us.af.mil/afvec/af-cool/welcome.

11. Air University Associate to Baccalaureate Cooperative Program (AU-ABC Program). Directs Airmen with associate in Applied Science Degrees from the CCAF to a collection of accredited military friendly colleges and universities to consider when completing a four-year degree. The program maximizes the application of military career education and training and provides a multitude of online academic and support services for the enlisted member.

12. Additional Off-Duty Education. Off-Duty education is a personal choice that is encouraged for all. Individuals desiring to become an AETC Instructor should be actively pursuing an associate degree. A degreed faculty is necessary to maintain accreditation through the Southern Association of Colleges and Schools.

13. AEROSPACE PHYSIOLOGY CAREER FIELD PATH:

13.1. Enlisted Career Path. The following chart depicts a complete picture of education, training, and assignment positions through all 1H0X1 skill levels. Information outlined in each of these figures represents an optimal "snapshot" of the Aerospace Physiology career field as of the publication date of this CFETP. The Air Force Enlisted Classification Directory contains a specialty summary, duties and responsibilities, and specialty qualifications for all AFSCs. Figure 1. contains developmental and skill-level Career Path Charts, while Table 5, contains the Career Development Plan for the 1H0X1 Air Force specialty.

Figure 1. Functional, Career Broadening, Developmental special duty and Leadership Paths.

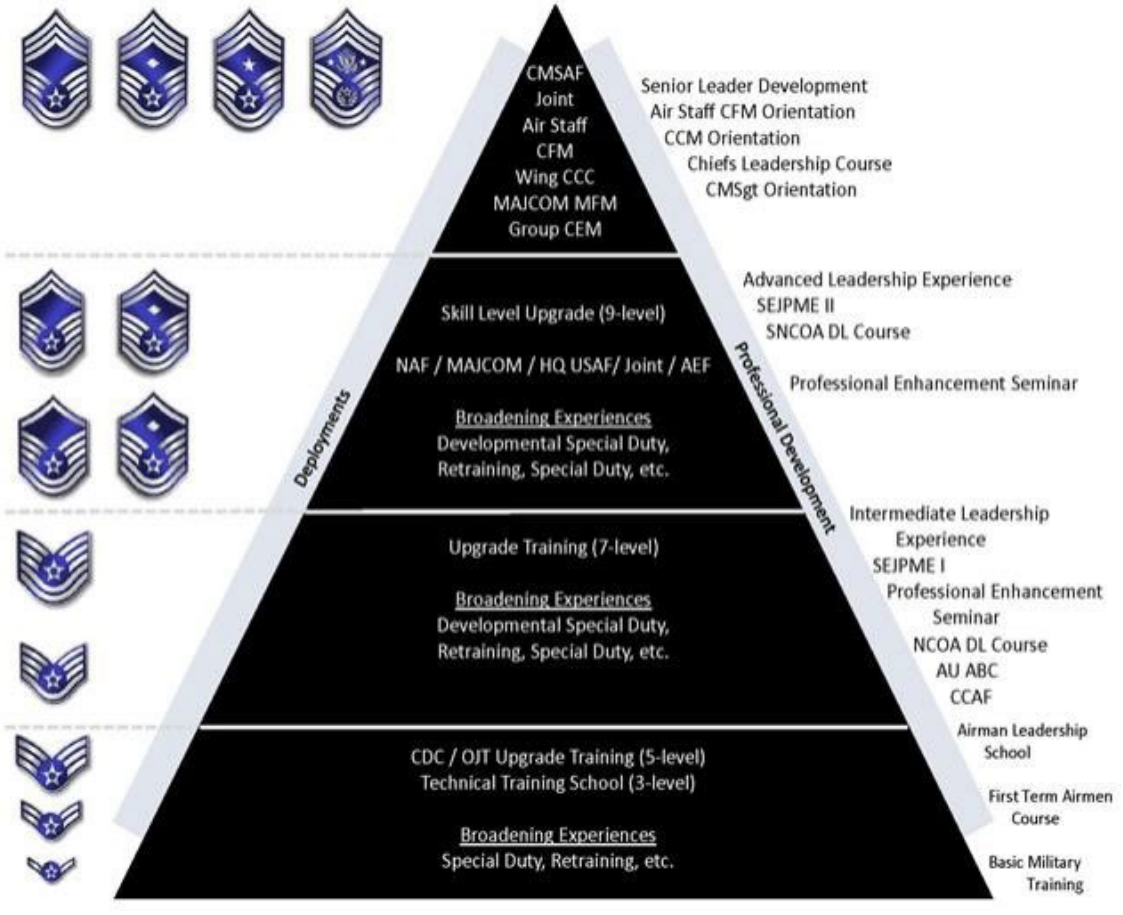

Table 5. AP Career Development Plan				
Phase	**Skill Level**	**Desired Education, Self-Development**	**Mandatory Training**	**Typical Assignment**
CFM	00-level	-- Graduate Degree -- Executive Seminars -- Professional certifications(s)	None	HQ USAF
CEM	00-level	-- Graduate Degree -- Executive Seminars -- Professional certifications(s)	None	MAJCOM/FOA/DRU
Superintendent 	9-level	-- Appropriate PME -- Bachelor's Degree -- Continued education in advanced studies -- Professional certifications(s)	None	Assigned at MAJCOM, or other headquarters, or large bases staff in a variety of functions (Force Manager, AP Policy and Programs, Force Development Manager AP, Force Manager Physiology Training Operations, MAJCOM Functional Manager, etc.)
Craftsman 	7-level	-- Appropriate PME -- Bachelor's degree - AU ABC program -- Continuing education in related studies -- Professional certifications(s)	-- Aerospace Physiology Craftsman (APC) course -- Human Factors Workshop for AP Professionals -- OJT and Qualification Training	-- Assignment at all levels as manager or craftsman -- Full performance as a manager of an AP function (Flight Chief, Section Chief, NCOIC)
Journeyman 	5-level	-- Appropriate PME -- Continuation training -- College courses/CCAF Aerospace Physiology Technology	-- Career Development Course (CDC) 1H051 -- USAF NVG Academic Instructor Course (NVGAIC) -- Minimum five sorties while in UGT -- OJT and Qualification Training	-- Initial duty assignment -- Performs at the fully qualified Journeyman level -- Begins management training -- Lateral training in other functional disciplines
Apprentice 	3-level	Continuation training (Some college courses)	-- Career Enlisted Aviator Fundamentals Course (CEAFC) -- Aerospace Physiology Apprentice (APA) course -- SV97A (Advanced Level-B SERE Skills Training) -- SV85A (Emergency Parachute and Water Survival Training) -- On-the-Job Training	Initial duty assignment

14. OPERATIONS SUPPORT BADGE. Established in 1993, the AF Operations Support Badge was originally awarded to enlisted personnel compromising four specialties: safety, survival training, life aircrew support, and pararescue. The Air Force Operations Support Badge displays an olive wreath wrapped around a shield displaying a globe with a pair of wings. The AP enterprise commenced a transition from a historical AFMS AFSC to a Line of the Air Force (LAF) AFSC. Beginning 31 October 2021, the AP career field adopted the AF Operations Support badge as its new occupational badge.

Figure 2. Basic badge.

Figure 3. Senior badge.

Figure 4. Master badge.

14.1. The Operations Support badge is awarded in three distinct types: Basic, Senior, and Master Level. Both Officers and Enlisted wear the Basic badge after completion of ***AFSC-awarding courses***. The senior badge is awarded upon attaining the 7-skill level for Enlisted or 7 years in the career field for Officers. The Master badge is awarded upon sewing on the rank of Master Sergeant (MSgt) and with 5 years in AP from award of the 7-skill level or a total of 15 years in the career field for Officers. Individuals are highly encouraged to wear their current occupational badge while following guidance outlined in DAFI 36-2903, *Dress and Personal Appearance of Department of the Air Force Personnel.*

15. PERMANENT AWARD OF USAF AVIATION AND PARACHUTIST BADGES

15.1. Aircrew Member Badges. Aerospace Physiology personnel may wear the Enlisted Aircrew Badge upon completion of Initial Certification prior to satisfying the requirements for permanent award. The servicing Host Aviation Resource Management office permanently awards the basic airman aircrew member badge to a career enlisted aviator or other non-rated aircrew member effective the date the member satisfies the requirements outlined in DAFMAN 11-402 *Aviation, Missile and Parachutist Service* and AFMAN 11-2PHYSV1 *Aerospace Physiology Training.*

Figure 5. Basic Enlisted Aircrew Badge.

Figure 6. Senior Enlisted Aircrew Badge

Figure 7. Chief Enlisted Aircrew Badge.

15.2 Parachutist Badges. The AP parachute duty and military free fall (MFF) programs represent the career field's effort to enhance readiness, human operational performance, provide critical physiology training and support DAF mishap prevention efforts. These program also increases mission effectiveness and safety by providing the very best instruction via experienced parachutists as platform instructors. Training and wear requirements of Aviation badges are outlined in DAFMAN 11-402 *Aviation, Missile and Parachutist Service* and AFI 10-3503 *Personnel Parachute Program.*

Figure 8. Basic Parachutist.

Figure 9. Senior Parachutist.

Figure 12. Master MFF Parachutist

SECTION C - SKILL LEVEL TRAINING REQUIREMENTS

16. PURPOSE. Skill level training requirements in this career field are defined in terms of task, knowledge and performance requirements. This section outlines the specialty qualification requirements for each skill level in broad, general terms and establishes the mandatory requirements for entry, award, and retention of each skill level. The specific task and knowledge training requirements are identified in the STS and the Course Objective List in Part II, Section B of this CFETP.

16.1. Specialty Qualifications: This information is located in the official specialty description in AFECD.

16.1.1. Knowledge. Knowledge of anatomy and physiology is mandatory, and knowledge on the physiological effects of flight is highly desirable.

16.1.2. Education. For entry into this specialty, completion of high school or general educational development equivalency is mandatory. Additional courses in Science, Technology, Engineering, and Mathematics (STEM) are desirable. A minimum score of 50 is required on the General portion of the Armed Services Vocational Aptitude Battery (ASVAB).

16.1.3. Training. For award of AFSC 1H031, individuals must meet mandatory requirements listed in specialty description in the Air Force Enlisted Classification Directory (AFECD). Completion of the CEAFC, SV85A (Emergency Parachute and Water Survival Training), SV97A (Advanced Level-B SERE Skills Training) is mandatory for pipeline and non-aviation service cross training students. In addition to the above, completion of the Aerospace Physiology Apprentice (APA) course with an embedded Non-pipeline acceleration training (NPAT) Centrifuge Training event, is mandatory for award of the 3-skill level AFSC.

16.1.4. Other. The following are mandatory as indicated:

16.1.4.1. For entry, award, and retention of this AFSC:

16.1.4.2. Must meet Physical qualification for non-rated enlisted positions in accordance with DAFMAN 48-123,

Medical Examinations and Standards, Initial Flying Class III (IFCIII) flight qualification exam. ***EXCEPTION***: The unit commander shall coordinate with Career Field Manager, Aerospace Physiology (1H0X1) to conduct a retention determination for fully qualified 1H0X1 personnel who no longer meet Flying Class III requirements.

16.1.4.3. Must meet depth perception requirements as defined in DAFMAN 48-123.

16.1.4.4. Qualification for aviation service according to AFMAN 11-402, *Aviation, Missile, and Parachutist Service*.

16.1.4.5. Members assigned to "X" prefix authorizations will maintain physical qualifications as non-career enlisted aviator according to DAFMAN 48-123.

16.1.4.6. Members assigned to "J" prefix authorizations will maintain physical qualifications as parachutist according to DAFMAN 48-123.

16.1.4.7. All members assigned to "X" prefix authorizations will maintain qualifications and currency requirements IAW AFMAN 11-2PHYSV1, *Aerospace Physiology Training.*

16.1.4.8. All members assigned to "J" prefix authorizations will maintain qualifications and currency requirements IAW AFI 10-3503, *Personnel Parachute Program.*

16.1.4.9. Must maintain eligibility to deploy and mobilize worldwide.

16.1.4.10. Must meet height requirements in accordance with DAFMAN 48-123.

16.1.4.11. Must maintain local network access IAW AFI 17-130, *Cybersecurity Program Management* and DAFMAN 17-1301, *Computer Security (COMPUSEC)*.

16.1.4.12. Specialty requires routine access to Tier 3 (T3) information, systems or similar classified environments.

16.1.4.13. Completion of a favorable adjudicated personnel security investigation and a national security clearance determination. The commander may make interim security access determination IAW DoDM 5200.02_DAFMAN 16-1405, *Department of the Air Force Personnel Security Program*.

16.1.5. Training Sources and Resources. Completion of the APA course satisfies the knowledge and training requirements specified in the specialty qualification section (above) for award of the 3-skill level.

16.1.6. Implementation. Entry into training is accomplished by initial accessions from Basic Military Training School (BMTS) or approved retraining from any AFSC. Upon completion of the required courses listed in paragraph 16.1.3., an AP technician begins UGT to attain their 5-skill level via OJT and NLT 60-days from arrival to their initial duty assignment and completion of the appropriate JQS and CDC. Thereafter, upgrade training is initiated anytime an individual is assigned duties they are not qualified to perform.

17. JOURNEYMAN 5-LEVEL TRAINING:

17.1. Specialty Qualification. All qualifications for AFSC 1H031 apply to the 1H051 requirements.

17.2. Knowledge. Knowledge in the following subject matter is mandatory: physiology instruction fundamentals, AP non-CEA duties and responsibilities, the Aerospace Physiology Training Team (APTT) program, fatigue countermeasures, physiological events in the altitude chamber, and the reduced oxygen breathing device (ROBD), flight theory; navigation procedures to include chart reading; using survival equipment and oxygen breathing systems; communication procedures; aircraft emergency procedures; publications, and flight manuals.

17.3. Education. Appropriate PME. AP Technicians are highly encouraged to complete the required courses in pursuit of their CCAF Aerospace Physiology Technology Associate in Applied Science degree.

17.4. Training. The following training is mandatory for the award of the 5-skill level: completion of the 1H051 CDC, OJT and qualification training, completion of the NVGAIC course and a minimum of five sorties while in 5-skill level UGT.

17.5. Experience. Qualification in and possession of AFSC 1H031. In addition, the individual must complete the CDC end of course exam, requirements as listed in the applicable MAJCOM training directives, and the appropriate core AFSC UGT items listed in the Specialty Training Standard (STS).

17.6. Other. See paragraph 16.1.4.

17.7. Training Sources and Resources. Refer to Part II, Section D, Training Course Index.

17.8. Implementation. Entry into upgrade training is initiated when an individual possesses the 3-skill level and NLT 60-days from arrival to their initial duty assignment. An AP technician begins UGT to attain their 5-skill level via OJT and completion of the appropriate JQS, CDC and QTP. Upon completion of the required courses listed in paragraph 5.2, and satisfactory qualification in the items listed in the STS/JQS, individuals are certified with their 5- skill level upgrade. Thereafter, qualification training is initiated anytime an individual is assigned duties they are not qualified to perform.

18. CRAFTSMAN 7-LEVEL TRAINING:

18.1. Specialty Qualification. All qualifications for AFSC 1H051 apply to the 1H071 requirements.

18.2. Knowledge. Knowledge in the following subject matter is mandatory: mitigation of work hazards and high- r i s k operations, Mission Essential Task List (METL) fundamentals, career opportunities, physiology unit management, expanded knowledge on physiology instruction fundamentals, human performance optimization strategies, altitude chamber and subsystems inspections and maintenance. In addition to knowledge required for the 5-skill level and other qualifications as listed above an individual must possess the knowledge and skills necessary to lead and supervise personnel.

18.3. Education. Appropriate PME. Craftsmen are highly encouraged to pursue voluntary advanced academic degrees (Bachelor's and/or Master's Degree) and professional certifications to enhance their leadership capabilities.

18.4. Training. The following training is mandatory for the award of the 7-skill level: completion of the 1H071 OJT tasks and completion of the in-resident APC course with the embedded Human Factors Workshop for AP Professionals.

18.5. Experience. Must be a currently qualified 1H051. In addition, the individual must complete requirements as listed in the applicable MAJCOM training directives, and the appropriate core AFSC UGT items listed in the STS. Also, experience performing functions such as: observing, evaluating and assisting with the unique physiological demands of the Major Weapons System (MWS), human factors/human performance challenges within the MWS, aircrew breathing systems, and aircrew MWS interface; provide operational safety, suitability and effectiveness (OSS&E) lessons learned to existing aircrew training platforms and human systems integration.

18.6. Other. See paragraph 16.1.4.

18.7. Training Sources and Resources. Refer to Part II, Section D, Training Course Index.

18.8. Implementation. Entry into upgrade training is initiated when an individual receives a line number to the rank of Staff Sergeant. The trainee must possess the 5-skill level and begin UGT to attain their 7-skill level via OJT and completion of the appropriate JQS. Upon completion of the required courses listed in paragraph 18.4., and satisfactory qualification in the items listed in the STS/JQS, trainees are certified with their 7-skill level upgrade. Thereafter, qualification training is initiated anytime an individual is assigned duties they are not qualified to perform.

19. SUPERINTENDENT 9-LEVEL TRAINING:

19.1. Specialty Qualification.

19.2. Knowledge. Knowledge in the following subject matter is mandatory: Flight Chief experience, emotional intelligence principles, resource management, force distribution and stratification process, organizational management, human resource development, critical thinking and decision-making, MAJCOM Functional Manager roles and responsibilities, enlisted assignment system, assignment management tools. In addition to knowledge required for the 7-skill level and other qualifications as listed above an individual must possess the knowledge and skills necessary to lead,

supervise, and mentor personnel.

19.3. Education. Appropriate PME. Superintendents are highly encouraged to pursue voluntary advanced academic degrees (Bachelor's and/or Master's Degree) and professional certifications to enhance their strategic leadership capabilities. Superintendent responsibilities include expanding their knowledge in leadership, operational, managerial concepts and advanced communication skills.

19.4. Training. An individual must hold the rank of Senior Master Sergeant (SMSgt) and have supervisor's recommendation for award of the 9-skill level.

19.5. Experience. Qualification in and possession of AFSC 1H071. In addition, the individual must complete requirements as listed in the applicable MAJCOM training directives, and the appropriate core AFSC UGT items listed in the Specialty Training Standard (STS).

19.6. Other. See paragraph 16.1.4.

19.7. Training Sources and Resources. Refer to Part II, Section D, Training Course Index.

19.8. Implementation. Entry into upgrade training is initiated when an individual receives a line number to the rank of Senior Master Sergeant. The trainee must possess the 7-skill level and begin UGT to attain their 9-skill level via completion of the appropriate JQS. Upon completion of the required courses listed in paragraph 19.4., and satisfactory qualification in the items listed in the STS/JQS, trainees are certified with their 9-skill level upgrade. Thereafter, qualification training is initiated anytime an individual is assigned duties they are not qualified to perform.

20. CHIEF ENLISTED MANAGER (CEM) AND CAREER FIELD MANAGER (CFM) 0-LEVEL TRAINING:

20.1. Specialty Qualification.

20.2. Knowledge. Knowledge in the following subject matter is mandatory: 3-skill level, 5-skill level, 7-skill level 9-skill level duties and responsibilities. In addition to knowledge listed above an individual must possess the knowledge and skills necessary to lead, manage, supervise, mentor and coach personnel at the highest level of strategic leadership.

20.3. Education. Appropriate PME. Chiefs are highly encouraged to pursue voluntary advanced academic degrees (Bachelor's and/or Master's Degree) and professional certifications to enhance their strategic leadership capabilities. Chief responsibilities include expanding their knowledge in leadership, operational, and managerial concepts and advanced communication skills.

20.4. Training. Executive seminars. An individual must hold the rank of Chief Master Sergeant (CMSgt) and have supervisor's recommendation for award of the 0-skill level.

20.5. Experience. Qualification in and possession of AFSC 1H091.

20.6. Other. See paragraph 16.1.4.

20.7. Training Sources and Resources. Refer to Part II, Section D, Training Course Index.

20.8. Implementation. Entry into upgrade training is initiated when an individual receives a line number to the rank of Chief Master Sergeant. The trainee must possess the 9-skill level and begin UGT to attain their 0-skill level. Thereafter, qualification training is initiated anytime an individual is assigned duties they are not qualified to perform.

21. REQUALIFICATION.

21.1. Requalification. A requalification is required for 1H0X1 personnel serving outside the primary AFSC for more than 180 days (6 months) or returning from a special duty assignment. The initial evaluation and skills verification is required within 60 days of reintegration into a 1H0X1 UMD authorization, IAW DAFMAN 36-2689, *Training Program.* Members will demonstrate, and supervisors will document, competency in critical skills relevant to the assigned unit. Re-accomplishment of all 5- or 7-level tasks is not required; training should focus only on those items that fail to meet knowledge-based or task-evaluation standards. For academic instruction, the flight commander or flight chief will direct an evaluation of the instructor's knowledge and presentation skills prior to allowing them to teach without supervision.

The supervisor's overall assessment of an individual's knowledge level and required proficiency training is essential to fully and successfully reintegrate Airmen into the Aerospace Physiology Technician role.

Example: SSgt Edwards returns to AP from DSD, she is competent on Hypobaric Chamber operations, but does not remember ROBD STS line items. SSgt Edwards will be decertified on ROBD and begin retraining. SSgt Edwards will be evaluated on one or more classroom instruction courses at the direction of the APTF Commander/APTT Chiefs/Flight Superintendents/Flight Chiefs prior to teaching to actual Aircrew or parachutists without supervision.

21.2. 1H091 Requalification. Individuals returning to the career field in the rank of SMSgt or above do not have to meet requalification requirements. However, they must meet minimum requirements to perform hazardous and flight duties as prescribed by the CFETP, AFMAN 11-403, *Aerospace Physiology Training Program*; and if assigned to conduct HAAMS, AFMAN 11-409, *High Altitude Airdrop Mission Support Capability Program*.

22. DUTY TITLES

22.1. General Duty Titles: When properly applied, duty titles facilitate a quick understanding of a person's role and level of responsibility. Duty titles are important to the career field for proper recognition across the force. Duty titles are used by leadership and boards for mentorship, career planning, and promotion. The following duty titles are common throughout the enlisted force but may vary based on organizational structure. In each of these positions, Airmen are responsible for Executing the Mission, Leading People, Improving the Unit and Managing Resources at a level commensurate to their title.

22.1.1. Supervisor. Used for Junior Enlisted Airmen and Noncommissioned Officers who are first-line supervisors. Junior Enlisted Airmen will not have the duty title "Supervisor" unless they are at least a Senior Airman and supervise the work of others. Supervisors are responsible for prepping the line by ensuring those under their charge are meeting all responsibilities and continuing to develop.

22.1.2. Noncommissioned Officer in Charge (NCOIC). Used for Noncommissioned Officers responsible for a work center or element that typically have subordinate supervisors. Noncommissioned Officer in Charge is also used for those whose primary duty is a unit-wide program or function management, even if they do not directly rate personnel.

22.1.3. Section Chief. Used for Senior Noncommissioned Officers and occasionally Noncommissioned Officers responsible for a section with at least two subordinate work centers or elements.

22.1.4. Flight Chief. Used for Senior Noncommissioned Officers, and occasionally Noncommissioned Officers, who are the enlisted leaders of a **flight**.

22.1.5. Manager. Used for Senior Noncommissioned Officers and Noncommissioned Officers who are program, project, and policy managers at higher headquarters and staff levels. Managers may or may not have personnel working for them and may be the enlisted leader of the branch, division, or directorate.

22.1.6. Superintendent. Used for Senior Noncommissioned Officers in charge of functional responsibilities. Only Senior Noncommissioned Officers will hold the duty title of Superintendent.

22.1.7. Chief. Used for Chief Master Sergeants and civilians who are program, project or policy managers at Numbered Air Force, Major Command, Direct Reporting Unit, Field Operating Agency, Joint Staff, or Air Staff. Chiefs may or may not have personnel working for them and may be the enlisted leader of the branch, division, or directorate.

22.2. Specific Leadership Positions Within the Specialty: Airmen may serve in a variety of special leadership or duty positions inside the functional community. Specific positions include:

22.2.1. Career Field Manager (CFM), Aerospace Physiology. The enlisted career field manager is typically a Chief Master Sergeant, located at Headquarters Air Force, responsible for organizing their enlisted career field. Their responsibilities include establishing career field entry requirements, developing/managing training plan requirements, evaluating training effectiveness, monitoring career field manning health, collaborating with other CFMs on issues affecting their airmen, and providing input on programs and policies. Additionally, through Enlisted Development Teams, the CFM ensures the most qualified Noncommissioned and Senior Noncommissioned Officers are placed into

key leadership or key development positions utilizing talent management practices.

22.2.2. Major Command Functional Manager (MFM), Aerospace Physiology. Enlisted Major Command Functional Managers are Senior Noncommissioned Officers who manage Aerospace Physiology across their command as well as serve as liaisons to CFM, 1H0X1. Responsibilities include visiting the organizations, monitoring the health, balancing manning, elevating concerns, evaluating command training, and disseminating programs and policies for their designated career fields. MFM's are responsible for coordinating with Air Force Personnel Center, through their major command, to distribute personnel.

22.2.3. Senior Enlisted Leader (SEL). Senior Enlisted Leader is a duty title reserved for the commander-appointed senior enlisted member at a detachment, squadron, or group. Additionally, this title may be used for appointed Senior Noncommissioned Officers at higher headquarters who lead directorates and/or divisions. Senior Enlisted Leaders provide vital leadership and management experience regarding organizing, equipping, training, and mobilizing the unit or group to effectively meet home station and expeditionary mission requirements. SELs must be well versed and able to advocate for future resources and evolving mission requirements.

22.3. AP Standardized Duty Titles. Approved Aerospace Physiology duty titles are outlined in Table 6 to maintain alignment with core career progression pathways. This listing is not intended to be all-inclusive, as specialized mission sets like HAISR or HAAMS may require specific operational duty titles. Local leadership can utilize specialized duty titles when necessary to accurately reflect these unique operational roles and mission requirements.

Table 6. Aerospace Physiology Duty Titles

1H0X1 Duty Title	Recommended MilPDS submission (limited to 31 characters)	Helper, 1H0X1	Apprentice, 1H031	Journeyman, 1H051	Craftsman, 1H071	Superintendent, 1H091	Chief Enlisted Manager, 1H000

Technician, Aerospace Physiology	Technician, Aerospace Physiology	X	X				
Upgrade Training Manager, Aerospace Physiology	Tng Mngr, Aerospace Physiology				X		

22.4. Enlisted Development Team (EDT). The CFM, Aerospace Physiology will conduct annual EDTs by releasing a Charter in accordance with DAFI 36-2670, *Total Force Development.* The AP EDT charter provides vectors based on projected (or anticipated) requirements by grade, level, and position type. Through a vectoring process the EDT provides a collective recommendation for an experience level, training or education opportunity, or position type for an Airman's next or subsequent assignment. The 1H0X1 EDT charter reviews and outlines the training, education, and experience requirements for the most critical AP duty positions and provides a vector for the best qualified Senior Noncommissioned Officers (SNCOs) into key AP developmental and leadership positions.

Table 7. Key Developmental and Leadership positions.

Key Developmental Positions	
AFSOC Functional Manager, 1H0X1	Curriculum and Production Manager, 1H0X1
AFGSC Functional Manager, 1H0X1

AMC Functional Manager, 1H0X1	

23. AEROSPACE PHYSIOLOGY UNIVERSITY

23.1. PURPOSE: The mission of Aerospace Physiology University (AP-U) is to develop 1H0X1 Aerospace Physiology personnel beyond baseline formal training, and hone the capacity for relevant, operational applications of critical skillsets. This will be accomplished through innovative education and collaborative mentorship, informed by research, and focused on 21st century conflict. Through consistent training, communication, and mentorship by an elected Board of Trustees (BoT), the AP-U priorities are to identify training improvement areas and establish innovative solutions to provide safe and serviceable equipment.

23.2. Organization: AP University is organized as an online campus (SharePoint website), stewarded by a

Board of Trustees (BoT) operating on behalf of the 13HX and 1H0X1 CFMs, and AETC MAJCOM Program Manager (PM) and MFM.

23.3. Further details and training modules are available here:
https://usaf.dps.mil/sites/AerospacePhysiology/APUniv/SitePages/AerospacePhysiologyUniversity.aspx

SECTION D - RESOURCE CONSTRAINTS

24. PURPOSE. This section identifies known resource constraints that preclude optimal/desired training from being developed or conducted, including information such as cost and manpower. Narrative explanations of each resource constraint and an impact statement describing what effect each constraint has on training are included. Also included in this section are actions required, office of primary responsibility, and target completion dates. Resource constraints will be reviewed and updated at least annually.

24.1. Apprentice Level Training. None identified.

24.2. Journeyman Level Training. None identified.

24.3. Craftsman Level Training. None identified.

24.4. Superintendent Level Training. None identified.

24.5. CEM and CFM Level Training. None identified.

SECTION E - TRANSITIONAL TRAINING GUIDE

There are currently no transition requirements. This area is reserved.

BY ORDER OF THE SECRETARY OF THE AIR FORCE

OFFICIAL

GEORGE S. WILD II, CMSgt, USAF
CFM, Aerospace Physiology

PART II

SECTION A – SPECIALTY TRAINING STANDARD

2. Implementation. This STS will be used for technical training provided by Air Education and Training Command. This document is the foundation for technician development in areas related to competency models, upgrade training, equipment inspection, grade and skill-level progression, and AP program management. The intent of competency-based modeling (CBM) is to ensure AP technicians gain pertinent knowledge, skills and attitudes (KSAs) to effectively and safely perform assigned duties. This approach is a departure from traditional time-based training models and focuses on demonstrating proficiency in specified objectives as described in the Occupational Competency Model (Attachment 1). These STS attachments will be used for technical training provided by Air Education and Training Command impacting the 3-level Apprentice Course and 7-level Craftsman Course. **OJT will be implemented upon 60-days from the date of the CFETP publishing. Effective 1 October 2026, AETC will use this specialty training standard for APA technical training courses.**

3. Work center supervisors. Tailor records to meet the unit's needs as long as the intent of the applicable forms and training program is not compromised. Keep at least one copy of the entire CFETP (Part I, II, Section E, and Attachments) in the work center for general access and master training list/plan development.

4. Purpose. As prescribed in DAFMAN 36-2689, *Training Program* and this STS. The CFETP Part II identifies the AP occupational competencies. Each competency is further broken down into the following proficiency levels: basic, intermediate, advanced, and expert. The proficiency levels are not tied to a specific rank or position. Additionally, each occupational competency has supporting competencies tied to them. The supporting competencies can allow Airmen to intentionally develop those transferrable underlying characteristics that will translate to mission capabilities, mission readiness, and mission success for the agile, future thinking Airmen. Airmen, supervisors, trainers, mentors, and leaders should look for opportunities to integrate the supporting competencies into every facet of an Airman's development as they seek to gain and increase proficiency within the 1H0X1 competencies.

5. Qualitative Requirements. Attachment 2 contains the proficiency code key used to indicate the level of training and knowledge provided by resident training and career development courses.

6. Job Qualification Standard. The STS becomes a job qualification standard (JQS) for upgrade training when placed in the Individual Training Record and used according to DAFMAN 36-2689. Continual progression of knowledge and performance is necessary for mastery of the Aerospace Physiology specialty. Training will continually evolve through basic, intermediate, advanced and expert competency levels. This program builds upon and enhances subject knowledge, performance training or performance knowledge behaviors.

7. Wartime Tasks. To ensure mission readiness during contingency operations, 1H0X1 personnel may be required to augment Aircrew Flight Equipment (AFE) sections. In such events, local commanders, in coordination with the 1H0X1 and 1P0X1 CFMs and MFMs, will use CFETP 1P0X1, *Aircrew Flight Equipment*, as the authoritative source to identify a pre-determined list of core augmentation tasks (e.g., inspection of specific life support assets, basic equipment servicing). This ensures training is standardized and focused on tasks where Aerospace Physiology personnel can be most effective with minimal spin-up time.

8. Documentation. Per DAFMAN 36-2689, an approved Air Force electronic system (e.g. TBA 2.0, etc.) is the official method for documenting training completion. Supervisors will use this system to identify duty position requirements and certify all completed training. As a minimum, the entries must be equivalent to the information captured in the columns of the STS in Part II (e.g., Training Completed, Trainee Initials, Trainer Initials, and Certifier Initials). An AFJQS may be used in lieu of Part II of the CFETP only upon approval from the CFM. **NOTE:** *The CFM, 1H0X1 may supplement these minimum documentation procedures as needed or as deemed necessary for their Career Field.*

9. Transcribing from Existing to New CFETP. All AFJQSs and previous CFETPs are replaced by this

CFETP; therefore, transcribing of all training records to this CFETP STS is mandatory. Use this CFETP STS (or automated STS) to identify all past and current qualifications. Document all previous and current training IAW DAFMAN 36-2689.

10. Training References. Serve as a guide for development of CDCs and promotion tests used in the Weighted Airman Promotion System (WAPS). Specialty Knowledge Tests (SKT) are developed at the AETC Test and Development Branch, by Senior Noncommissioned Officers with extensive practical experience in their career field. SKTs are developed by subject matter experts who authenticate Weighted Airman Promotion System material and reference AF Specialty-specific occupational analysis data. Questions are based upon study references listed in the Enlisted Promotions References and Requirements Catalog. Individual responsibilities are in Chapter 4, paragraph 4.2.16 of DAFMAN 36-2664, *Personnel Assessment Program.*

11. Recommendations. Report unsatisfactory performance of individual course graduates to the 342 TRS. 342 TRS 2510 5th Street, Bldg. 850, Wright-Patterson AFB, OH 45433-7931. When communicating specific issues, reference Attachment 2 and specific Specialty Training Standard paragraphs (line item/s), training standard element, etc.

Attachment 1

OCCUPATIONAL COMPETENCY MODEL

A1. Competencies. The Air Force defines competencies as a combination of knowledge, skills, abilities, and other characteristics that manifest in observable and measurable pattern of behaviors required for mission success. The Aerospace Physiology community has rebuilt the entire training platform by using competencies to identify the behaviors that are needed to be successful on the job. This has been accomplished by identifying and integrating the 1H0X1, Aerospace Physiology occupational competencies and leveraging the Air Force's foundational competencies in a manner that provides all Airmen with transparent and unbiased pathways towards their own successful development.

A1.1. Airmen's Foundational Competencies. The foundational competencies are a set of accepted and valued competencies, which enable success across a wide array of DAF missions, roles, functions, and duties. These competencies are the core of Airmen development and enable Airmen with tools, pathways, and capabilities to improve their performance in any job, specialty, or situation. The foundational competencies are grouped into different categories of Developing Self, Developing Others, Developing Ideas, and Developing Organization. Airmen can utilize MyVector (accessible via AF Portal) to complete a self-assessment, which will have them evaluate themselves on the 24 Airmen's foundational competencies or a 360-degree assessment, where subordinates, peers, and leaders can also provide feedback. The assessment tools will provide Airmen with immediate feedback on personal strengths and areas for improvement. Additionally, a personal improvement plan with targeted resources (videos, reading content, developmental opportunities) are provided for continued self-development.

Figure 1. Airmen's Foundational Competencies.

A1.2. Occupational Competencies. Occupational competencies are a set of competencies required of all Airmen within a specific workforce category. These competencies provide a framework that describes the knowledge, skills, abilities, and other characteristics needed to perform that function's mission successfully.

A1.2.1. Occupational Competency Model. A career field's competencies can be viewed in a competency model, which is an organized collection of competencies pertinent to the career field. The occupational competency model provides a framework to effectively assess, maintain, and monitor the competencies required for mission success for Airmen within the 1H0X1 community. The occupational competency modeling process follows a distinct process with continued involvement from the career field and allows Airmen to see how their task lists, upgrade training, formal courses, and other training, education, and experiences are aligned to the career field's strategic objectives.

A1.2.2. Career fields work with trained competency experts to identify and develop their competency model, which consists of the competencies, sub-competencies, and definitions. Occupational competency models will be different for each career field. The model focuses on integrating not just the technical components, but also leadership, management, combat, joint, all-domain, and social mastery competencies required for Airmen to succeed in their career field.

Competency	Sub-Competency	Sub-Competency Description
Training Devices	Management	The oversight and administration of specialized training equipment and implementation of associated programs.
	Maintenance	The servicing and sustainment of specialized training equipment ensuring safety and reliability for mission effectiveness.
	Operations	Utilizing specialized training equipment, resources, and the ability to perform procedures for assigned duties.
Administration	Administration	The process of tracking, updating, and maintaining records, schedules, and taskers IAW guidance and publications.
Program Compliance	Stand/Eval	A system to assess personnel capability to ensure compliance with operational, training, and administrative directives.
	Quality Assurance	Validating procedures through quality control (QC) programs, enforcing policies and technical orders, overseeing deficiencies, and compiling data for reporting and improvement initiatives.
Aircrew Operations	Instruction	A method of facilitating learning for aircrew and operators to accomplish objectives IAW syllabi.
	Parachuting	Demonstrating proficiency in executing parachute jumps while applying physiological principles relevant to high-altitude operations.
	HAAMS (High-Altitude Airdrop Mission Support)	Monitoring, assisting, and advising aircrew, operators, and mission essential personnel during unpressurized high-altitude missions.
	Non-CEA (Non-Career Enlisted Aviator)	The process of applying Aerospace Physiology operational and aircrew breathing system knowledge and integrating personnel into direct weapon system support roles.
Resource Management	Resource Management	The allocation and utilization of personnel, programs, equipment, infrastructure, and budgetary requirements.

Figure 2. 1H0X1, Aerospace Physiology, Occupational Competency Model

A1.2.3. Occupational Competency Rubric. After a model is developed, a team of subject matter experts begin building competency rubrics, which consists of competency, a description of the competency, proficiency levels, and measurable and observable behaviors. The competency rubrics will help Airmen learn which behaviors are aligned to the career field's strategic direction, the professional developmental expectations, and the criteria for success. Figure 3 provides an example of a competency rubric for 1H0X1 career field.

Competency	Proficiency Levels	Observable Behaviors
Training Devices	**Expert** Impact on: AF-level practices/within industry	1. Oversees programs to provide safe and effective training for aircrew and operators 2. Consults with outside agencies for sustainment of training operations 3. Authors policy and guidance for training operations 4. Advocates to outside agencies for device advancement and modernization of training operations
Sub-Competency	**Advanced** Impact on: Management decisions	1. Evaluates program discrepancies and apply risk assessment to determine the impact on program objectives 2. Validates data for higher-level reporting to support the acquisition and sustainment process
Management		
Description	**Intermediate** Impact on: Specific workplace projects	1. Executes programs and advises flight leadership to ensure safe training operations 2. Analyzes and resolves program discrepancies to ensure safe training operations 3. Compiles data for higher-level reporting to support the acquisition and sustainment process
The oversight and administration of specialized training equipment and implementation of associated programs.		
Supporting Competencies	**Basic** Impact on: Specific workplace tasks	1. Identifies discrepancies and communicates to the supervisory level to ensure the safety of training operations 2. Supports programs to ensure the availability of serviceable equipment 3. Documents and maintains applicable forms needed for accountability and reporting requirements
Communication Accountability Decision Making Analytical Thinking		

Figure 3. 1H0X1, Aerospace Physiology, Occupational Competency Rubric for Management

A1.2.4. To better understand how to read and utilize the competency rubric, a breakdown of each component is explained below in figure 4a-c.

Competency Training Devices	←	The competency section states the competency group.
Sub-Competency Management	←	The sub-competency section states the narrower category that forms part of the competency group. **Note:** Some models may only consist of a competency and not include a sub-competency.
Description The oversight and administration of specialized training equipment and implementation of associated programs.	←	The description section provides a statement that gives details about the sub-competency, enabling career field members to better understand how sub-competency relates to the AFS.
Supporting Competencies Communication Accountability Decision Making Analytical Thinking	←	The supporting competencies section are supported-level competencies that are linked to the success of the sub-competency. These competencies lend themselves more toward areas like values, traits, and attitudes. These competencies were included as part of a larger survey that went out to the entire AFS; respondents were asked to rate the top supporting competencies they believe will contribute to higher successful performance within the sub-competency.

Figure 4a. Competency Rubric Section 1.

Proficiency Levels	←	The proficiency levels are broken into four parts: basic, intermediate, advanced, and expert. Under each proficiency level are predetermined criteria selected by a group of SMEs from your career field and validated by the career field. The criteria were used as the basis to develop observable behaviors. These criteria provide concrete parameters for the behaviors, which are consistent but progressive in nature as a member moves up the scale from basic to expert. Some of the criteria (e.g. depth of knowledge and consistency of application/complexity) allow an individual to become an expert through the experience gained in a particular job and over a period. For example, the person can quickly move up different proficiency levels while they are serving as a technician at a flight; they move quickly because they are exposed to a variety of situations. While other criteria (e.g. scope, impact, and reach of influence) require more of a hierarchical approach to gain the experience needed to progress through the competency levels. Moving
Expert Impact on: AF-level practices/within industry		
Advanced Impact on: Management decisions		
Intermediate Impact on: Specific workplace projects		

Basic Impact on: Specific workplace tasks		through the proficiency levels may be difficult to do in certain jobs. For example, if scope at the expert level requires job integration with the AF-level, then the individual may have to be in a position where they can gain that experience (i.e. at HHQ, Wing, or an organization with far reaching capabilities).

Figure 4b. Competency Rubric Section 2.

Observable Behaviors	←	The observable behaviors are statements of what can be observed from an individual manifesting the competency at the respective competency level. They provide objective evidence that the individual possesses the competency level, and shows what effective performance looks like. The behaviors are written to be specific enough so they can be observable and lend themselves towards measurement.
1. Oversees programs to provide safe and effective training for aircrew and operators 2. Consults with outside agencies for sustainment of training operations 3. Authors policy and guidance for training operations 4. Advocates to outside agencies for device advancement and modernization of training operations		
1. Evaluates program discrepancies and apply risk assessments to determine the impact on program objectives 2. Validates data for higher-level reporting to support the acquisition and sustainment process		
1. Executes programs and advises flight leadership to ensure safe training operations 2. Analyzes and resolves program discrepancies to ensure safe training operations 3. Compiles data for higher-level reporting to support the acquisition and sustainment process		
1. Identifies discrepancies and communicates to the supervisory level to ensure the safety of training operations 2. Supports programs to ensure the availability of serviceable equipment 3. Documents and maintains applicable forms needed for accountability and reporting requirements		

Figure 4c. Competency Section 3.

A1.3. Another key component within the rubric is the supporting competencies section at the bottom left-hand corner. These are the top four supporting competencies that can help members excel and be successful in that sub-competency. Some of these supporting competencies are tied directly to the Airmen's Foundational Competencies, while others may be unique to the career field. Having these supporting competencies identified and linked to a career field's competency model can cultivate those underlying characteristics needed to succeed on the job. Leaders, supervisors, trainers, instructors, or mentors can now set members up for greater success by building these supporting competencies and placing their Airmen in situations where they can apply those strategies. All these elements come together to ensure we can develop Airmen who are better prepared, present and future mission focused, and ready to succeed in any situation. Additionally, AFH 36-2643, *Air Force Mentoring Program*, has information on how competencies can be used when an established mentoring strategy is put into effect to foster and develop Airmen.

A1.4. Competency Development. The intent of moving towards a competency-based system is to sharpen our Airmen's tactical expertise, operational competence, strategic vision, and joint proficiency to lead and execute the full spectrum of USAF missions. This occurs not in a classroom but on the job by combining education, training, and experiences to provide Airmen with a better developmental pathway as they move along their careers. Airmen are still required to complete specific training courses, core tasks, and other training requirements to attain a 3-, 5-, and 7-skill levels. Competency development allows Airmen to move beyond the minimum career field requirements and begin addressing developmental gaps and strengthening their capabilities. The information included within the competency model will

allow members within the Aerospace Physiology community to manage their professional growth and development by identifying their strengths and weaknesses against clear and objective behaviors within the competency model.

A1.5. Below are the competency rubrics for the 1H0X1 Aerospace Physiology, career field:

Competency	Proficiency Levels	Observable Behaviors
Training Devices	**Expert** Impact on: AF-level practices/within industry	1. Oversees programs to provide safe and effective training for aircrew and operators 2. Consults with outside agencies for sustainment of training operations 3. Authors policy and guidance for training operations 4. Advocates to outside agencies for device advancement and modernization of training operations
Sub-Competency	**Advanced** Impact on: Management decisions	1. Evaluates program discrepancies and apply risk assessment to determine the impact on program objectives 2. Validates data for higher-level reporting to support the acquisition and sustainment process
Management		
Description	**Intermediate** Impact on: Specific workplace projects	1. Executes programs and advises flight leadership to ensure safe training operations 2. Analyzes and resolves program discrepancies to ensure safe training operations 3. Compiles data for higher-level reporting to support the acquisition and sustainment process
The oversight and administration of specialized training equipment and implementation of associated programs.		
Supporting Competencies	**Basic** Impact on: Specific workplace tasks	1. Identifies discrepancies and communicates to the supervisory level to ensure the safety of training operations 2. Supports programs to ensure the availability of serviceable equipment 3. Documents and maintains applicable forms needed for accountability and reporting requirements
Communication Accountability Decision Making Analytical Thinking		

Competency	Proficiency Levels	Observable Behaviors
Training Devices	**Expert** Consistency of Application: Able to innovate and formulate strategies; able to model/guide/teach others the competency of how to apply the competency	1. Coordinates with outside agencies for servicing and replacing equipment 2. Mentors personnel on equipment utilization IAW guidance to predict, isolate, and resolve problems
Sub-Competency	**Advanced** Consistency of Application: Sustained application of competency over time in complex situations	1. Enforces adherence to checklists and procedures to minimize errors and ensure compliance 2. Analyzes operating principles and predicts device life cycle to facilitate proactive measures
Maintenance		
Description	**Intermediate** Consistency of Application: Sustained application of competency over time in a variety of situations	1. Identifies problems with device and operations to provide corrective action recommendations to mitigate discrepancies 2. Explains relationships of equipment facts and principles to determine step-by-step operating procedures
The servicing and sustainment of specialized training equipment ensuring safety and reliability for mission effectiveness.		
Supporting Competencies	**Basic** Consistency of Application: Sustained application of competency over time	1. Performs specialized training equipment inspection IAW checklists to prevent malfunctions 2. Identifies core principles of device concepts to facilitate technical application and meet safety standards
Accountability Precision Flexibility Decision Making		

Competency	Proficiency Levels	Observable Behaviors
Training Devices	**Expert** Consistency of Application: Able to innovate and formulate strategies; able to model/guide/teach others the competency of how to apply the competency	1. Analyzes operating procedures to mitigate gaps and enhance mission effectiveness 2. Develops training scenarios to enhance operational effectiveness
Sub-Competency	**Advanced** Consistency of Application: Sustained application of competency over time in complex situations	1. Validates effectiveness of personnel qualification to meet local mission objectives 2. Troubleshoots device malfunctions for safe operations
Operations		
Description	**Intermediate** Consistency of Application: Sustained application of competency over time in a variety of situations	1. Trains others on operating procedures to meet requirements 2. Anticipates emergency and non-standard situations and responds to ensure the safety of personnel and equipment
Utilizing specialized training equipment, resources, and the ability to perform procedures for assigned duties.		
Supporting Competencies	**Basic** Consistency of Application: Sustained application of competency over time	1. Performs operating procedures to meet requirements 2. Responds to emergency procedures with strict adherence to ensure the safety of personnel and equipment
Communication Analytical Thinking Decision Making Flexibility		

Competency	Proficiency Levels	Observable Behaviors
Administration	**Expert** Scope: Integration with AF-level/within industry	1. Forecasts schedules to ensure requirements meet mission demands 2. Validates reports for accuracy to inform leadership of mission capability and performance
Sub-Competency	**Advanced** Scope: Integration with organizational strategies	1. Performs quality checks on administrative duties to ensure instructor and aircrew readiness 2. Supervises scheduling, academic, and administration activities to ensure compliance with published guidance
Administration		
Description	**Intermediate** Scope: Integration with concerned areas	1. Trains personnel to meet records management requirements 2. Manages scheduling duties to facilitate and enhance the student notification process 3. Prepares flight reports to facilitate manning actions
The process of tracking, updating, and maintaining records, schedules, and taskers IAW guidance and publications.		
Supporting Competencies	**Basic** Scope: Specific Area	1. Maintains student, instructor, and non-CEA records to validate mission readiness 2. Assists in the preparation and distribution of flight reports to facilitate manning actions 3. Assists with scheduling duties to facilitate and enhance the student notification process
Communication Accountability Precision Digital Literacy		

Competency	Proficiency Levels	Observable Behaviors
Program Compliance	**Expert** Reach of Influence: MAJCOM/AF-Level/Industry	1. Authors inspection policy and guidance to ensure compliance with career field directives 2. Authors aircrew requirements to prepare non-CEAs to deliver MDS-specific training
Sub-Competency	**Advanced** Reach of Influence: Wing/Institutional	1. Informs leaders of trends and changes to advocate for modernization of operations 2. Drafts and distributes changes to standardized training plans, documentation, and evaluation processes to produce effective inspection programs
Stan/Eval		
Description	**Intermediate** Reach of Influence: Unit/Groups	1. Maintains standardized training plans, documentation, and evaluation processes for aircrew instructors and non-CEAs 2. Identifies trends and recommends changes to programs and directives to mitigate the risks of flight and perform as an effective aircrew instructor and non-CEA
A system to assess personnel capability to ensure compliance with operational, training, and administrative directives.		
Supporting Competencies	**Basic** Reach of Influence: Individuals	1. Conducts evaluations IAW published guidance to produce effective aircrew instructors 2. Manages aircrew requirements to prepare non-CEA for flight duties
Communication Accountability Leadership Analytical Thinking		

Competency	Proficiency Levels	Observable Behaviors
Program Compliance	**Expert** Scope: Integration with AF-level/within industry	1. Informs leaders of trends and changes to advocate for modernization of operations 2. Oversees program to provide safe and effective operations
Sub-Competency	**Advanced** Scope: Integration with organizational strategies	1. Analyzes inspection data to identify trends and risks for corrective actions 2. Monitors guidance for updates and distributes it to ensure compliance
Quality Assurance		
Description	**Intermediate** Scope: Integration with concerned areas	1. Enforces policies and guidance to ensure safe operations 2. Provides oversight of identified deficiencies and observations to identify trends and implement corrective actions
Validating procedures through quality control (QC) programs, enforcing policies and technical orders, overseeing deficiencies, and compiling data for reporting and improvement initiatives.		
Supporting Competencies	**Basic** Scope: Specific Area	1. Conducts inspections and assessments of devices and equipment to ensure compliance with established procedures 2. Documents deficiencies and observations identified during inspections and assessments for further review and corrective action
Communication Accountability Analytical Thinking Precision		

CFETP 1H0X1

Competency	Proficiency Levels	Observable Behaviors
Aircrew Operations	**Expert** Consistency of Application: Able to innovate and formulate strategies; able to model/guide/teach others the competency of how to apply the competency	1. Analyzes Mission Design Series (MDS) specific training to reduce mishaps and mission degradation 2. Advances syllabi changes to develop a curriculum tailored to meet mission requirements 3. Develops instructional standard operating procedures to maintain consistent and efficient delivery of education
Sub-Competency	**Advanced** Consistency of Application: Sustained application of competency over time in complex situations	1. Manages cadre qualification to ensure instructors' methodology meets curriculum and standards objectives 2. Revises test and curriculum to ensure alignment with evolving changes with higher level guidance 3. Pursues educational and development opportunities to network and stay current on educational trends and best practices
Instruction		
Description	**Intermediate** Consistency of Application: Sustained application of competency over time in a variety of situations	1. Trains cadre on instructional methods and techniques to ensure the achievement of training objectives 2. Assesses student progress to validate learning objectives are met 3. Performs non-syllabus instruction to provide advanced training skills
A method of facilitating learning for aircrew and operators to accomplish objectives IAW syllabi.		
Supporting Competencies	**Basic** Consistency of Application: Sustained application of competency over time	1. Prepares personalized lesson plans to fulfill capstone requirements and maximize student engagement and learning objectives 2. Assists aircrew and operators in practical labs to ensure students meet training objectives 3. Utilizes instructional methods and techniques to perform effective instruction
Communication Develops People Information Seeking Analytical Thinking		

Competency	Proficiency Levels	Observable Behaviors
Aircrew Operations	**Expert** Consistency of Application: Able to innovate and formulate strategies; able to model/guide/teach others the competency of how to apply the competency	1. Directs parachute program to ensure safe airborne operations 2. Collaborates with MAJCOM and HAF Personnel Parachute Program Manager (PPPM) to maximize parachute program effectiveness
Sub-Competency	**Advanced** Consistency of Application: Sustained application of competency over time in complex situations	1. Manages risks associated with high-altitude parachuting operations to safely complete a HALO and HAHO airborne operation 2. Liaises with required agencies to safely complete an airborne operation
Parachuting		
Description	**Intermediate** Consistency of Application: Sustained application of competency over time in a variety of situations	1. Demonstrates the steps to prepare for a HALO/HAHO airborne operation 2. Demonstrates the ability to safely exit an aircraft during a HALO/HAHO airborne operation 3. Applies knowledge of parachuting environment and specific physiological demands to mitigate human factors threats
Demonstrating proficiency in executing parachute jumps while applying physiological principles relevant to high-altitude operations.		
Supporting Competencies	**Basic** Consistency of Application: Sustained application of competency over time	1. Demonstrates the steps to prepare for a static line airborne operation 2. Demonstrates the ability to safely exit an aircraft during a static line airborne operation 3. Correlates human factors risks of parachuting to provide relevant training
Analytical Thinking Leadership Teamwork Decision Making		

CFETP 1H0X1

Competency	Proficiency Levels	Observable Behaviors
Aircrew Operations	**Expert** Scope: Integration with AF-level/within industry	1. Directs program to ensure the safety of flight for high altitude operations 2. Collaborates with MAJCOM and HAF to maximize the DoD HAAMS program effectiveness
Sub-Competency	**Advanced** Scope: Integration with organizational strategies	1. Assesses and mitigates risks associated with operations to accomplish mission objectives safely 2. Liaises with multiple agencies to safely complete mission objectives
HAAMS (High-Altitude Airdrop Mission Support)		
Description	**Intermediate** Scope: Integration with concerned areas	1. Demonstrates in-flight tasks to perform operations 2. Demonstrates pre- and post-mission planning for operations
Monitoring, assisting, and advising aircrew, operators, and mission essential personnel during unpressurized high-altitude missions.		
Supporting Competencies	**Basic** Scope: Specific Area	1. Explains roles and responsibilities to execute the operational mission 2. Performs duties with oversight to perform high-altitude sorties
Communication Analytical Thinking Decision Making Leadership		

Competency	Proficiency Levels	Observable Behaviors
Aircrew Operations	**Expert** Depth of Knowledge: New practices/concepts and theories of all workplace elements; is a credible resource in this area	1. Oversees flying training program to ensure unit readiness 2. Collaborates with the flight safety office to provide human factors analysis for mishap investigations
Sub-Competency	**Advanced** Depth of Knowledge: New practices of all workplace elements	1. Evaluates challenges within the MDS to ensure relevant training is provided by instructors 2. Directs standardization of flight duties to ensure conformance with prescribed aircrew procedures
Non-CEA (Non-Career Enlisted Aviator		
Description	**Intermediate** Depth of Knowledge: Established practices of all workplace elements	1. Trains personnel on flight duties to develop competencies 2. Applies knowledge to aircrew on Mission Design Series (MDS) specific physiological demands to mitigate human factors threats
The process of applying Aerospace Physiology operational and aircrew breathing system knowledge and integrating personnel into direct weapon system support roles.		
Supporting Competencies	**Basic** Depth of Knowledge: Established practice with some workplace elements	1. Obtains universal aircraft qualifications to perform in-flight duties 2. Demonstrates ability to execute flight duties to meet training and developmental objectives
Communication Information Seeking Critical Thinking Analytical Thinking		

Competency	Proficiency Levels	Observable Behaviors
Resource Management	**Expert** Scope: Integration with AF-level/within industry	1. Develops communication channels to coordinate resource management efforts in support of operations 2. Advocates for adequate resource allocation to ensure successful mission accomplishment 3. Provides strategic direction in functional areas to optimize the use of available resources
Sub-Competency Resource Management	**Advanced** Scope: Integration with organizational strategies	1. Designs organizational structure and delegates authority to create a framework that enables efficient and effective performance 2. Assesses staffing needs and oversees duty assignments, and deployments to ensure personnel are trained and qualified 3. Collaborates with other units and agencies as needed to leverage resources and support operations
Description The allocation and utilization of personnel, programs, equipment, infrastructure, and budgetary requirements.	**Intermediate** Scope: Integration with concerned areas	1. Communicates expectations, provides feedback, and resolves conflicts to create a positive work culture to drive performance 2. Manages personnel, inventory, budget and coordinates logistical support to ensure resources are mission-ready 3. Conducts professional development need assessment on personnel to ensure mission readiness
Supporting Competencies Communication Creative Thinking Decision Making Develops People	**Basic** Scope: Specific Area	1. Identifies opportunities and threats to ensure the efficiency and effectiveness of resource utilization 2. Monitors assigned duties and deadlines to ensure mission accomplishment 3. Maintains equipment and infrastructure (facilities, devices, etc.) to ensure adherence to safety protocols 4. Pursues training courses, workshops, and educational opportunities to enhance readiness

A1.6. STS Application Matrix. Found in Attachment 3, the STS Application Matrix is a quick-reference tool designed to assist supervisors and trainers in planning and documenting training. The matrices are organized by functional competency (e.g., Management, Maintenance, Operations) to help you quickly locate relevant tasks. The matrix directly links the task-oriented Specialty Training Standard (STS) line items from Attachment 2 to the specific training devices, equipment, or administrative forms on which those tasks are performed.

A1.6.1. How to read the matrices:

A1.6.1.1. Numbered Cells. The numbers within the matrix cells (e.g., 3, 5, 7) indicate the skill level at which the task is a core requirement for upgrade training (UGT).

A1.6.1.2. Blank Cells. A blank cell indicates the task is not a core UGT requirement. However, it may represent a qualification task that can be trained and certified if required by a specific unit's mission or equipment.

A1.6.2. Supervisors can use these matrices to:

A1.6.2.1. Evaluate newly assigned members by comparing their existing training records against the matrix to quickly determine which equipment and tasks they are already signed off on and identify any training gaps relevant to the current unit's mission.

A1.6.2.2. Streamline the development of the unit's Master Training Plan (MTP) by visually connecting tasks to the necessary resources.

A1.6.2.3. Quickly identify the core tasks and physical resources required for a specific skill level.

A1.6.2.4. Distinguish between core upgrade tasks and unit-specific qualification tasks.

A1.6.2.5. Ensure that hands-on training is conducted on the correct and relevant devices.

A1.6.3. For example. When preparing to train STS line item 1.3.1.3, "Operate applicable devices," a supervisor would navigate to the "Operations" matrix in Attachment 3. By finding row 1.3.1.3, they can see a "3" in the columns for the Altitude Chamber, ROBD, HFT, and Barany Chair. This signifies that operating these four devices is a core task for the 3-skill level. This allows for efficient and accurate training management.

Code	Definition
K	Subject Knowledge Training – The verb selection identifies the individual's ability to identify facts, state principles, analyze, or evaluate the subject.
P	Performance Training – Identifies that the individual has performed the task to the satisfaction of the course; however, the individual may not be capable of meeting the field requirements for speed and accuracy.
pk	Performance Knowledge Training – The verb selection identifies the individual's ability to relate simple facts, procedures, operating principles, and operational theory for the task.
-	This mark is used alone instead of a scale value to show no proficiency training is provided in the course or CDC.
X	This mark is used alone in the course columns to show that training is required but not given due to limitation in resources.

Explanations:

*** A subject knowledge scale value is used alone to define a level of knowledge for a subject not directly related to any specific task, or for a subject common to several tasks.**

NOTE: All tasks and knowledge items shown with a proficiency code are trained during war time.

1. Competencies, Behaviors, Outcomes, and Technical References (TRs)	Behavior Match	2. Tasks: Core/Cert ^	2. Tasks: Deployment * / SEI + CBRN ~	4. Behavioral Codes Used to Indicate Formal Training/Information Provided via ICW and/or course: Wartime (W)	3 Lvl Crse	5 Lvl CDC	7 Lvl Crse
1. TRAINING DEVICES							
1.1. MANAGEMENT **Description:** The oversight and administration of specialized training equipment and implementation of associated programs. **Supporting Competencies:** Communication, Accountability, Decision Making, Analytical Thinking **TR**: AFI 33-322, Air Force Privacy and Civil Liberties Program ; DoDI 5000.64_DAFI 23-111, Accountability and Management of DoD Equipment and Other Accountable Property; Air Force Enlisted Classification Directory; AFMAN 36-2100, Military Classification, Technical Training, and Retraining; DAFMAN 11-401, Aviation Management; TO 00-5-1, AF Technical Order System; TO 00-20-1, Aerospace Equipment Maintenance Inspection, Documentation, Policy and Procedures ; TO 00-25-107, Maintenance Assistance							
1.1.1. Management (Basic) **Required Behaviors:** 1. Identifies discrepancies and communicates to the supervisory level to ensure the safety of training operations 2. Supports programs to ensure the availability of serviceable equipment 3. Documents and maintains applicable forms needed for accountability and reporting requirements **Criteria:** *Impact on: Specific workplace tasks*							
1.1.1.1. Locate applicable guidance (e.g., ETIMS, SDS, JSTO)	1			-	P	-	-
1.1.1.2. Apply guidance to identify safety procedures	1	5		-	pk	-	-
1.1.1.3. Inform supervisor/trainer of potential discrepancies	1	5		-	pk	-	-
1.1.1.4. Locate applicable guidance for support programs (e.g., PMEL, Equipment Custodian, HAZMAT)	2	5		-	pk	-	-
1.1.1.5. Execute device guidance	2			-	P	-	-

1.1.1.6. Assist with inventory (e.g., local equipment inventory, CA/CRL, PMEL)	2	5		-	pk	-	-
1.1.1.7. Locate applicable guidance (e.g., AFTO 244, AFTO 95)	3	5		-	pk	-	-
1.1.1.8. Annotate forms	3	5		-	pk	-	-
1.1.1.9. Maintain forms IAW local records management processes	3	5		-	pk	-	-
1.1.2. Management (Intermediate) **Required Behaviors:** 1. Executes programs and advises flight leadership to ensure safe training operations 2. Analyzes and resolves program discrepancies to ensure safe training operations 3. Compiles data for higher-level reporting to support the acquisition and sustainment process **Criteria:** *Impact on: Specific workplace projects*							
1.1.2.1. Communicate discrepancies to mitigate risk	1	5		-	pk	-	-
1.1.2.2. Perform program guidance (e.g., ROBD, Chamber, AFE, HAZMAT, PMEL)	1	5		-	pk	-	-
1.1.2.3. Analyze device discrepancy trends	2			-	-	-	P
1.1.2.4. Inform corrective action plan	2	7		-	-	-	-
1.1.2.5. Rectify local discrepancies	2	5		-	-	-	-
1.1.2.6. Compile device data	3	5		-	-	-	-
1.1.2.7. Apply process improvement concepts to drive innovation	3			-	-	-	pk
1.1.2.8. Provide input for device procurement	3			-	-	-	pk
1.1.3 Management (Advanced) **Required Behaviors**: 1. Evaluates program discrepancies and apply risk assessment to determine the impact on program objectives 2. Validates data for higher-level reporting to support the acquisition and sustainment process **Criteria:** *Impact on: Management Decisions*							
1.1.3.1. Analyze communicated program discrepancies	1			-	-	-	pk
1.1.3.2. Conduct risk assessment	1			-	-	-	pk
1.1.3.3. Compose corrective action plan	1			-	-	-	pk
1.1.3.4. Determine impact on program objectives	1			-	-	-	pk
1.1.3.5. Report device data trends to higher-level	2			-	-	-	pk

1.1.3.6. Analyze resources for forecasted operational needs	2			-	-	-	pk
1.1.3.7. Analyze resources for forecasted upgrade and proficiency training needs	2			-	-	-	pk
1.1.3.8. Communicate gap analysis to appropriate level	2			-	-	-	pk
1.1.4. Management (Expert) **Required Behaviors:** 1. Oversees programs to provide safe and effective training for aircrew and operators 2. Consults with outside agencies for sustainment of training operations 3. Authors policy and guidance for training operations 4. Advocates to outside agencies for device advancement and modernization of training operations **Criteria:** *Impact on: AF-level practices/within industry*							
1.1.4.1. Coordinate T.O. change requests	1			-	-	-	pk
1.1.4.2. Validate device service contracts (e.g., chamber, ROBD, centrifuge)	1			-	-	-	pk
1.1.4.3. Disseminate programmatic guidance through appropriate channels (FCIF, policy letter, etc.)	1			-	-	-	pk
1.1.4.4. Communicate device status and sustainment needs to appropriate agencies (e.g., SPO, HAF/MAJCOM A3)	2			-	-	-	pk
1.1.4.5. Synthesize field-level input to coordinate training sustainment with appropriate agencies	2			-	-	-	pk
1.1.4.6. Compile input and change requests from the field (AP units) and/or user groups (e.g., aircrew, jumpers)	3			-	-	-	pk
1.1.4.7. Coordinate policy and guidance changes with applicable offices (MAJCOM/HAF)	3			-	-	-	pk
1.1.4.8. Publish policy and guidance changes through appropriate channels (HAF/MAJCOM A3)	3			-	-	-	pk
1.1.4.9. Produce guidance and syllabus for new training devices/modalities	3			-	-	-	pk
1.1.4.10. Solicit SME input regarding new training requirements	4			-	-	-	pk
1.1.4.11. Communicate training device upgrade requirements to outside agencies (e.g., SPO)	4			-	-	-	pk
1.1.4.12. Forecast future device requirements based off emerging mission sets (e.g., ACE, MEO)	4			-	-	-	pk

1.2. MAINTENANCE **Description:** The servicing and sustainment of specialized training equipment ensuring safety and reliability for mission effectiveness. **Supporting Competencies:** Accountability, Precision, Flexibility, Decision Making **TR**: Air Force Enlisted classification Directory; DAFMAN 11-402, Aviation, Missile, and Parachutist Service ; AFMAN 11-403, Aerospace Physiology Training Program; AFMAN 36-2100, Military Classification, Technical Training, and Retraining; DAFMAN 11-401, Aviation Management; TO 00-20-1, Aerospace Equipment Maintenance Inspection, Documentation, Policy and Procedures; TO 00-20-2, Maintenance Data Documentation; TO 00-20-3, Maint Processing of Repairable Property and Repair of Cycle Asset Control Sys; TO 00-35D-54, USAF Deficiency Reporting, Investigation, and Resolution ; TO 32-1-101, Use and Care of Hand Tools and Measuring Tools (TM 9-243)							
1.2.1. Maintenance (Basic) **Required Behaviors:** 1. Performs specialized training equipment inspection IAW checklists to prevent malfunctions 2. Identifies core principles of device concepts to facilitate technical application and meet safety standards **Criteria:** *Consistency of Application: Sustained application of competency over time*							
1.2.1.1. Complete orientation of device	1			-	P	-	-
1.2.1.2. Locate applicable guidance (e.g., ETIMS, Lead Command SharePoint)	1			-	P	-	-
1.2.1.3. Utilize applicable checklists, T.O.s and AFIs	1			-	P	-	-
1.2.1.4. Observe inspection of device	1			-	P	-	-
1.2.1.5. Conduct inspection under certified supervision	1			-	P	-	-
1.2.1.6. Communicate perceived problems of device functions	1			-	P	-	-
1.2.1.7. Complete JSTO review	2			-	P	-	-
1.2.1.8. Recall applicable checklists, T.O.s and AFIs	2			-	K	-	-
1.2.1.9. Recall applicable (T.O.) guidance for theory of operations	2			-	K	-	-
1.2.1.10. Brief trainer/supervisor on device operations	2			-	P	-	-

1.2.1.11. Demonstrate safe operations of device usage	2			-	P	-	-
1.2.2. Maintenance (Intermediate) **Required Behaviors:** 1. Identifies problems with device and operations to provide corrective action recommendations to mitigate discrepancies 2. Explains relationships of equipment facts and principles to determine step-by-step operating procedures **Criteria:** *Consistency of Application: Sustained application of competency over time in a variety of situations*							
1.2.2.1. Perform device inspection	1			-	P	-	-
1.2.2.2. Perform troubleshooting procedures	1			-	P	-	-
1.2.2.3. Communicate recommendations for corrective actions	1	7		-	-	pk	-
1.2.2.4. Demonstrate knowledge of equipment facts and principles	2			-	pk	-	-
1.2.2.5. Conduct training on device maintenance	2	7		-	-	-	-
1.2.2.6. Develop local checklist procedures	2			-	-	-	pk
1.2.3. Maintenance (Advanced) **Required Behaviors:** 1. Enforces adherence to checklists and procedures to minimize errors and ensure compliance 2. Analyzes operating principles and predicts device life cycle to facilitate proactive measures **Criteria:** *Consistency of Application: Sustained application of competency over time in complex situations*							
1.2.3.1. Validate local checklist for device use	1	7		-	-	-	pk
1.2.3.2. Observe maintenance checklist operations	1	7		-	-	-	-
1.2.3.3. Communicate evaluation of maintenance procedures to mitigate errors	1	7		-	-	-	-
1.2.3.4. Complete self-assessment for maintenance compliance	1	7		-	-	-	pk
1.2.3.5. Collect data for maintenance inspection schedule	2	7		-	-	-	pk
1.2.3.6. Analyze maintenance inspection schedule	2	7		-	-	-	pk
1.2.3.7. Coordinate maintenance with local training schedule	2	7		-	-	-	-

1.2.4. Maintenance (Expert) **Required Behaviors:** 1. Coordinates with outside agencies for servicing and replacing equipment 2. Mentors personnel on equipment utilization IAW guidance to predict, isolate, and resolve problems **Criteria:** *Consistency of Application: Able to innovate and formulate strategies; able to model/guide/teach others the competency of how to apply the competency*							
1.2.4.1. Communicate maintenance and troubleshooting needs with outside agencies (scheduled and unscheduled maintenance items, etc.)	1	7		-	-	-	pk
1.2.4.2. Schedule with outside agencies (e.g., PMEL, LRS, SPO)	1	7		-	-	-	pk
1.2.4.3. Report maintenance shortfalls to appropriate levels (e.g., parts shortage, long lead time)	1	7		-	-	-	pk
1.2.4.4. Collect and review trend analysis via QA	2			-	-	-	pk
1.2.4.5. Advise Stan/Eval of continuation training needs	2			-	-	-	pk
1.2.4.6. Verify training effectiveness with QA	2			-	-	-	pk
1.2.4.7. Modify training or utilization with Stan/Eval based on gap analysis	2			-	-	-	pk

1.3. OPERATIONS **Description:** Utilizing specialized training equipment, resources, and the ability to perform procedures for assigned duties. **Supporting Competencies:** Communication, Analytical Thinking, Decision Making, Flexibility **TR**: AFMAN 11-403, Aerospace Physiology Training Program; AFMAN 11-404, Fighter Aircrew Acceleration Training Program; AETC Syllabus S-O-B/A-APH; DAFMAN 11-401, Aviation Management; TO 14-1-1, U.S. Air Force Aircrew Flight Equipment Clothing and Equipment; TO 43D8-3-2-81, Operation and Maintenance Instructions -- Hypobaric Training Chamber, Models 20M331, 20M491, 20M6321, AND 10006 ; TO 14P3-1-161, Opr and Maint Instr With IPB -- Combined Advanced Technology, Enhanced Design G Ensemble (COMBAT EDGE Equipment), Mask Assembly, Oxygen, MBU-20P, PNG010-1100-11, -12, -13, -14, -22, -23, -24, -31, -32, -33, -34, -41, -42, -43, -44, -51, -52, -53, -54, -55, -61, -62, -63, -64, -65, Vest Assembly, CSU-17P, PN F148-1220-1, -2, -3, -4, -5, -6, -7, -8, Modification Kit, Helmet, Flyers, KMU-511P, PN 89B7698-11, -12, -13, Connector Integrated Terminal Block, CRU-94P, PN G002-1078-01, G002-1150-01, Connector, Regulated, CRU-120P, PN 3262033-0102; TO 14P3-4-151, Opr and Maint Instr with IPB -- HGU-55/P Flyers Lightweight Helmet; TO 15X-1-1, Maintenance Instructions; Oxygen Equipment; TO 15X1-4-2-12, Operation and Field Maintenance Instructions With Illustrated Parts Breakdown; Emergency Bail-Out Oxygen Cylinder Assemblies ; TO 15X5-3-6-1, Opr, Fitting, Insp, and Maint Instr With IPB -- MBU-12P, Pressure-Demand Oxygen Mask, PN 834-75-01, PN 834-75-02, PN 834-75-03, PN 834-75-04, PN 834-75-10, PN G012-1050-01, PN G012-1050-02, PN G012-1050-03, PN G012-1050-04, NSN 1660-01-081-9157LS, NSN 1660-01-073-7595LS, NSN 1660-01-073-7596LS, NSN 1660-01-081-2368LS, NSN 1660-01-363-0386MH (TM 55-1660-247-12) (SCOTT Aviation) ; TO 15X5-4-1-101, Opr, Maint and Insp Instr -- Oxygen							

Mask to Regulator Connector Assemblies -- TYPE CRU-8P, -60P, -43A, -43AA AND Sierra Engrg Company PN232-94A, 266-360, -370, -247, AND -245 --(Sierra Engrg); TO 15X6-4-3-2, Operation and Maintenance Instructions With Illustrated Parts Breakdown: Type MA-1 Portable Breathing Oxygen Assembly; Type A-21 Regulator, M5886-1 Cylinder; TO 33D2-10-135-1, Operational and Maintenance Instructions - Oxygen Mask Test Unit, Part Number 6112300-1 and Part Number 6112300 (COMM MNL); TO 42B5-1-2, Gas Cylinders (Storage Type) Use, Handling, and Maintenance							
1.3.1. Operations (Basic) **Required Behaviors:** 1. Performs operating procedures to meet requirements 2. Responds to emergency procedures with strict adherence to ensure the safety of personnel and equipment **Criteria:** *Consistency of Application: Sustained application of competency over time*							
1.3.1.1. Locate procedural requirements IAW applicable guidance (e.g., operating procedures, checklists, syllabus)	1			-	P	-	-
1.3.1.2. Observe operation of applicable devices (Altitude Chamber, ROBD, HFT, etc.)	1	5		-	P	pk	-
1.3.1.3. Operate applicable devices (e.g., Altitude Chamber, ROBD, HFT)	1			-	P	-	-
1.3.1.4. Review applicable Emergency Procedure (EP)	2	5		-	P	-	-

1.3.1.5. Practice applicable EP with supervision	2	5		-	P	-	-
1.3.1.6. Demonstrate ability to respond to applicable EP	2	5		-	P	-	-
1.3.1.7. Communicate EP response with applicable agencies	2	5		-	P	-	-
1.3.2. Operations (Intermediate) **Required Behaviors:** 1. Trains others on operating procedures to meet requirements 2. Anticipates emergency and non-standard situations and responds to ensure the safety of personnel and equipment **Criteria:** *Consistency of Application: Sustained application of competency over time in a variety of situations*							
1.3.2.1. Operate applicable devices (e.g., Altitude Chamber, ROBD, HFT)	1	7		-	-	-	-
1.3.2.2. Identify trainees (e.g., UGT, OJT, CT) needs	1	7		-	-	-	pk
1.3.2.3. Document trainees progress	1	7		-	-	-	pk
1.3.2.4. Provide feedback to trainee via applicable training records program	1	7		-	-	-	-
1.3.2.5. Demonstrate knowledge of non-standard emergency procedures (EP)	2	7		-	-	-	-
1.3.2.6. Perform scenario based training	2	7		-	-	-	-
1.3.2.7. Perform Continuation Training (CT)	2	7		-	-	-	-
1.3.2.8. Execute EP	2	7		-	-	-	-
1.3.2.9. Coordinate EP response with applicable agencies	2	7		-	-	-	-
1.3.2. Operations (Advanced) **Required Behaviors:** 1. Validates effectiveness of personnel qualification to meet local mission objectives 2. Troubleshoots device malfunctions for safe operations **Criteria:** *Consistency of Application: Sustained application of competency over time in complex situations*							
1.3.3.1. Coordinate with Stan/Eval and QA of training program effectiveness	1	7		-	-	-	pk
1.3.3.2. Review trainee performance on applicable device operations	1	7		-	-	-	-
1.3.3.3. Certify trainee training records	1	7		-	-	-	-
1.3.3.4. Execute troubleshooting procedures IAW applicable device guidance during training operations (e.g., T.O., manuals, checklists)	2	7		-	-	-	-
1.3.3.5. Communicate identified malfunction trends with outside agencies for actionable response	2	7		-	-	-	pk

1.3.2. Operations (Expert) **Required Behaviors:** 1. Analyzes operating procedures to mitigate gaps and enhance mission effectiveness 2. Develops training scenarios to enhance operational effectiveness **Criteria:** *Consistency of Application: Sustained application of competency over time in a variety of situations*							
1.3.4.1. Submit unit level T.O. Change Request	1			-	-	-	pk
1.3.4.2. Validate local checklist for device operations	1	7		-	-	-	-
1.3.4.3. Coordinate with local emergency response personnel for training needs	2	7		-	-	-	-
1.3.4.4. Incorporate higher-level guidance into scenario based training	2			-	-	-	pk
1.3.4.5. Incorporate Stan/Eval Trends into scenario based training	2			-	-	-	pk
2. ADMINISTRATION							
2.1. ADMINISTRATION **Description:** The process of tracking, updating, and maintaining records, schedules, and taskers IAW guidance and publications. **Supporting Competencies:** Communication, Accountability, Precision, Digital Literacy **TR**: AFI 48-127, Occupational Noise and Hearing Conservation Program ; AFVA 91-209, Air Force Occupational Safety and Health Program ; DAFMAN 91-203, Air Force Occupational Safety, Fire, and Health Standards ; TO 42B5-1-2, Gas Cylinders (Storage Type) Use, Handling, and Maintenance							
2.1.1. Administration (Basic) **Required Behaviors:** 1. Maintains student, instructor, and non-CEA records to validate mission readiness 2. Assists in the preparation and distribution of flight reports to facilitate manning actions 3. Assists with scheduling duties to facilitate and enhance the student notification process **Criteria:** *Scope: Specific Area*							
2.1.1.1. Review local Records Management process (e.g., File Plan and Test Controlled Procedures)	1	5		-	pk	-	-

2.1.1.2. Evaluate forms and documentation IAW with applicable guidance (e.g., DD Form 2992, AF Form 1522/IDS)	1			-	P	pk	-
2.1.1.3. Maintain instructor and student records (e.g., AF Form 1522, instructor evaluations, CPR/AED card) IAW applicable guidance	1	5		-	pk	-	-
2.1.1.4. Prepare applicable documentation (e.g., AF Form 1522, DD Form 114)	1			-	P	pk	-
2.1.1.5. Prepare documentation IAW DAFH 33-337, Tongue and Quill (emails, MFR, etc.)	1	5		-	-	-	-
2.1.1.6. Review applicable guidance for AP report requirements (e.g., AFMAN, directives)	2	5		-	pk	-	-
2.1.1.7. Collect data for reporting	2	5		-	pk	-	-
2.1.1.8. Prepare report	2	5		-	pk	-	-
2.1.1.9. Coordinate report for QC review	2	5		-	pk	-	-
2.1.1.10. Demonstrate professional customer service etiquette (e.g., email, phone, face-to-face)	3			-	P	-	-
2.1.1.11. Familiarize with technological programs for administrative duties (i.e. Word, PDF, Excel, Microsoft Teams, etc.)	3	5		-	-	-	-
2.1.1.12. Distinguish training needs IAW applicable syllabus	3	5		-	pk	pk	-
2.1.1.13. Assign instructors and crew positions with assistance	3			-	-	-	-
2.1.2. Administration (Intermediate) **Required Behaviors:** 1. Trains personnel to meet records management requirements 2. Manages scheduling duties to facilitate and enhance the student notification process 3. Prepares flight reports to facilitate manning actions **Criteria:** *Scope: Integration with concerned areas*							
2.1.2.1. Execute Records Management procedures	1	7		-	-	-	-
2.1.2.2. Identify trainees (e.g., UGT, OJT, CT) needs	1	7		-	-	-	-
2.1.2.3. Conduct training on administrative duties	1	7		-	-	-	-
2.1.2.4. Document trainees progress	1	7		-	-	-	-
2.1.2.5. Provide feedback to trainee via applicable training records program	1	7		-	-	-	-
2.1.2.6. Resolve scheduling conflicts	2	7		-	-	-	-
2.1.2.7. Identify student training requirements (e.g., documentation, course pre-requisites, equipment)	2	7		-	-	-	-

2.1.2.8. Assign instructors and crew positions	2	7		-	-	-	-
2.1.2.9. Perform QC for validation	2	7		-	-	-	pk
2.1.3.10. Accomplish corrective actions	2	7		-	-	-	-
2.1.3. Administration (Advanced) **Required Behaviors:** 1. Performs quality checks on administrative duties to ensure instructor and aircrew readiness 2. Supervises scheduling, academic, and administration activities to ensure compliance with published guidance **Criteria:** *Scope: Integration with organizational strategies*							
2.1.3.1. Finalize reports and documentation for higher-level processing	1			-	-	-	pk
2.1.3.2. Submit reports for higher-level processing	1			-	-	-	pk
2.1.3.3. Conduct local self-assessment on administrative duties (e.g., checklist, MICT)	1			-	-	-	pk
2.1.3.4. Partner with outside agencies for administrative duties (e.g., Finance, scheduling, HARM/SARM, Lead Command)	2	7		-	-	-	-
2.1.3.5. Validate scheduling coordination	2	7		-	-	-	-
2.1.3.6. Validate administrative requirements (e.g., checklists, procedures)	2	7		-	-	-	-
2.1.3.7. Communicate with Lead Command and MFMs	2	7		-	-	-	-
2.1.3.8. Validate academic activities	2	7		-	-	-	-
2.1.4. Administration (Expert) **Required Behaviors:** 1. Forecasts schedules to ensure requirements meet mission demands 2. Validates reports for accuracy to inform leadership of mission capability and performance **Criteria:** *Scope: Integration with AF-level/within industry*							
2.1.4.1. Project training demands (e.g., manning demands, pipeline, local aircrew needs)	1			-	-	-	-
2.1.4.2. Communicate resource needs to accomplish scheduling demands with appropriate agencies (e.g., HARM, HAF, A3)	1			-	-	-	-
2.1.4.3. Compile collective data (manning study, policy update, etc.)	2			-	-	-	-
2.1.4.4. Provide recommendations for improved capabilities	2			-	-	-	-

2.1.4.5. Action submitted data for career-field changes	2			-	-	-	-
3. PROGRAM COMPLIANCE							
3.1. STANDARDIZATION & EVALUATION **Description:** A system to assess personnel capability to ensure compliance with operational, training, and administrative directives. **Supporting Competencies:** Communication, Accountability, Leadership, Analytical Thinking **TR:** AFMAN 11-202V1, Aircrew Training; AFMAN 11-202V2, Aircrew Standardization and Evaluation Program ; AFMAN 11-403, Aerospace Physiology Training Program; AFDD 1-1; AFDD Vol 2; AFH 1, Airman ; AFH 36-2643; DAFI 36-2670, Total Force Development; AU-2; AU-24, Concepts of air Force Leadership; EO 13423; TO 00-5-1, AF Technical Order System							
3.1.1. Standardization & Evaluation (Basic) **Required Behaviors:** 1. Conducts evaluations IAW published guidance to produce effective aircrew instructors 2. Manages aircrew requirements to prepare non-CEA for flight duties **Criteria**: *Reach of Influence: Individuals*							
3.1.1.1. Evaluate personnel instructions	1			-	pk	-	pk
3.1.1.2. Advise Commander	1			-	pk	-	-
3.1.1.3. Draft policy to close Trend Analysis (TA) gaps	1			-	-	-	-
3.1.1.4. Execute inspection program	1			-	-	-	-
3.1.1.5. Coordinate qualification requirements	2			-	-	-	-
3.1.1.6. Draft policy to close gaps	2			-	-	-	-
3.1.1.7. Prepare personnel for inspection requirements (e.g., HARM, attachment documents, training schedule)	2			-	-	-	-
3.1.1.8. Navigate digital systems (PEX, GTIMS, etc.)	2			-	-	-	-
3.1.2. Standardization & Evaluation (Intermediate) **Required Behaviors:** 1. Maintains standardized training plans, documentation, and evaluation processes for aircrew instructors and non-CEAs 2. Identifies trends and recommends changes to programs and directives to mitigate the risks of flight and perform as							

an effective aircrew instructor and non-CEA **Criteria:** *Reach of Influence: Unit/Groups*							
3.1.2.1. Create review for personnel evaluations	1			-	-	-	-
3.1.2.2. Certify local checklists/forms for use	1			-	-	-	pk
3.1.2.3. Maintain program requirements	1			-	-	-	-
3.1.2.4. Manage inspection program	1			-	-	-	pk
3.1.2.5. Review drafted policy to close Trend Analysis (TA) gaps	2			-	-	-	-
3.1.2.6. Communicate with outside agencies	2			-	-	-	-
3.1.3. Standardization & Evaluation (Advanced) **Required Behaviors:** 1. Informs leaders of trends and changes to advocate for modernization of operations 2. Drafts and distributes changes to standardized training plans, documentation, and evaluation processes to produce effective inspection programs **Criteria:** *Reach of Influence: Wing/Institutional*							
3.1.3.1. Report Trends Analysis (TA) to higher level reviewer	1			-	-	-	-
3.1.3.2. Advocate for changes	1			-	-	-	-
3.1.3.3. Maintain distribution process	2			-	-	-	-
3.1.3.4. Draft documentation (e.g., FCIF, Read Files)	2			-	-	-	-
3.1.4. Standardization & Evaluation (Expert) **Required Behaviors:** 1. Authors inspection policy and guidance to ensure compliance with career field directives 2. Authors aircrew requirements to prepare non-CEAs to deliver MDS-specific training **Criteria:** *Reach of Influence: MAJCOM/AF-Level/Industry*							
3.1.4.1. Develop personnel evaluation qualifications	1			-	-	-	-
3.1.4.2. Publish policies for career field directives	1			-	-	-	-
3.1.4.3. Provide career field input to CEA courses	1			-	-	-	-

3.1.4.4. Provide career field input to non-CEA courses	2			-	-	-	-
3.1.4.5. Collaborate MDS-specific Functional Area Manager (FAM)	2			-	-	-	-
3.2. QUALITY ASSURANCE **Description:** Validating procedures through quality control (QC) programs, enforcing policies and technical orders, overseeing deficiencies, and compiling data for reporting and improvement initiatives. **Supporting Competencies:** Communication, Accountability, Analytical Thinking, Precision **TR:** AFMAN 11-301V1, Aircrew Flight Equipment (AFE) ; DAFMAN 91-203, Air Force Occupational Safety Fire and Health Standards ; DAFI 91-204, Safety Investigations and Reports ; AFI 33-322, Records Management and Information Governance Program ; TO 00-20-1, Aerospace Equipment Maintenance Inspection, Documentation, Policy and Procedures; TO 00-20-2, Maintenance Data Documentation; TO 00-35D-54, USAF Deficiency Reporting, Investigation, and Resolution; TO 14-1-1, U.S. Air Force Aircrew Flight Equipment Clothing and Equipment; TO 43D8-3-2-6, Insp Reqt – Hypobaric Training Chambers; TO 43D8-3-2-6WC-1, Insp Workcards – Low-Pressure Altitude Training chamber; TO 43D8-3-2-21, Opn Instr – Hypobaric Chamber Assy, Models 20M331, 20M491 and 37M423 (Guardite); TO 43D8-3-2-81, Operation and Maintenance Instructions -- Hypobaric Training Chamber, Models 20M331, 20M491, 20M6321, AND 10006; TO 43D8-3-2-84, Illustrated Parts Breakdown – Hypobaric Training Chamber, Models 20M331, 20M491, 20M6321, and 10006; TO 43D8-3-5-31, Operation and Maintenance Instr With Parts Breakdown – Six-Man Rectangular Stationary Auxiliary Chamber, PN 6M331B (Guardite); TO 43D8-7-6-1, Operation and Maintenance Manual W IPB – Combined Centrifuge, Time and Altitude Test Set, PN MBEU205123-1 (Martin Baker)							

3.2.1. Quality Assurance (Basic) **Required Behaviors:** 1. Conducts inspections and assessments of devices and equipment to ensure compliance with established procedures 2. Documents deficiencies and observations identified during inspections and assessments for further review and corrective action **Criteria:** *Scope: Specific Area*							
3.2.1.1. Navigate digital systems (e.g., ETIMS)	1	5		-	-	-	-
3.2.1.2. Execute inspection program	1			-	pk	-	pk
3.2.1.3. Advise Commander	2			-	pk	-	-
3.2.1.4. Compile TA Reports	2			-	-	-	-
3.2.1.5. Document inspection findings	2			-	-	-	pk
3.2.2. Quality Assurance (Intermediate) **Required Behaviors:** 1. Enforces policies and guidance to ensure safe operations 2. Provides oversight of identified deficiencies and observations to identify trends and implement corrective actions **Criteria:** *Scope: Integration with concerned areas*							
3.2.2.1. Validate policy (e.g., checklist, forms, pubs)	1			-	-	-	-
3.2.2.2. Schedule inspection cycle	1			-	-	-	-
3.2.2.3. Reviews policy and technical orders	2			-	-	-	-
3.2.2.4. Monitor deficiency reports	2			-	-	-	-
3.2.2.5. Collaborate with section leads	2			-	-	-	-
3.2.3. Quality Assurance (Advanced) **Required Behaviors:** 1. Analyzes inspection data to identify trends and risks for corrective actions 2. Monitors guidance for updates and distributes it to ensure compliance **Criteria:** *Scope: Integration with organizational strategies*							
3.2.3.1. Draft inspection criteria	1			-	-	-	-
3.2.3.2. Develop corrective actions plan for trends	1			-	-	-	-
3.2.3.3. Draft discrepancy reports for closure	2			-	-	-	-
3.2.3.4. Distribute policy and technical orders updates	2			-	-	-	-
3.2.3.5. Develop guidance management procedures	2			-	-	-	-

3.2.4. Quality Assurance (Expert) **Required Behaviors:** 1. Informs leaders of trends and changes to advocate for modernization of operations 2. Oversees program to provide safe and effective operations. **Criteria:** *Scope: Integration with AF-level/within industry*							
3.2.4.1. Advise corrective action recommendations	1			-	-	-	-
3.2.4.2. Finalize discrepancy reports	1			-	-	-	-
3.2.4.3. Communicate with MAJCOM trends impacting mission	1			-	-	-	-
3.2.4.4. Draft change guidance	2			-	-	-	-
3.2.4.5. Distribute updates	2			-	-	-	-
3.2.4.6. Implement guidance management procedures	2			-	-	-	-
4. AIRCREW OPERATIONS							
4.1. INSTRUCTION **Description:** A method of facilitating learning for aircrew and operators to accomplish objectives IAW syllabi. **Supporting Competencies:** Communication, Develops People, Information Seeking, Analytical Thinking **TR**: AFMAN 11-403 Aerospace Physiology Training Program ; AFMAN 11-202V1, Aircrew Training ; TO 00-5-1, AF Technical Order System; TO 43D8-3-2-81, Operation and Maintenance Instructions -- Hypobaric Training Chamber, Models 20M331, 20M491, 20M6321, AND 10006; TO 43D8-3-2-21, Opn Instr – Hypobaric Chamber Assy, Models 20M331, 20M491 and 37M423 (Guardite); TO 43D8-3-2-84, Illustrated Parts Breakdown – Hypobaric Training Chamber, Models 20M331, 20M491, 20M6321, and 10006; TO 43D8-7-6-1, Operation and Maintenance Manual W IPB – Combined Centrifuge, Time and Altitude Test Set, PN MBEU205123-1 (Martin Baker); TO 1T-6A-1, Flight Manual, T-6A Aircraft; TO 1T-38C-1CL-1, Flight Crew Checklist, Pilots Abbreviated, USAF Series T-38C Aircraft; TO 1T-38C-2-4, Organizational Maintenance, Pneudraulic System USAF Series T-38C Aircraft							

4.1.1. Instruction (Basic) **Required Behaviors:** 1. Prepares personalized lesson plans to fulfill capstone requirements and maximize student engagement and learning objectives 2. Assists aircrew and operators in practical labs to ensure students meet training objectives 3. Utilizes instructional methods and techniques to perform effective instruction security **Criteria:** *Consistency of Application: Sustained application of competency over time*							
4.1.1.1. Review AP lesson plan	1			-	P	-	-
4.1.1.2. Review MDS-specific mishaps	1			-	P	-	-
4.1.1.3. Review MDS characteristics	1			-	P	-	-
4.1.1.4. Review MDS-specific human factors principles	1			-	P	-	-
4.1.1.5. Prepare personalized lesson plan for ALL blocks of instruction IAW AETC Aerospace Physiology Training Syllabus – Initial	1			-	P	-	-
4.1.1.6. Observe practical labs	2			-	P	-	-
4.1.1.7. Prepare equipment	2			-	P	-	-
4.1.1.8. Demonstrate practical lab with assistance	2			-	P	-	-
4.1.1.9. Demonstrate knowledge of ALL blocks of instruction IAW AETC Aerospace Physiology Training Syllabus – Initial	3			-	P	-	-
4.1.1.10. Observe instructions	3			-	P	-	-
4.1.1.11. Deliver presentations with assistance	3			-	P	-	-
4.1.1.12. Showcase knowledge of learning style	3			-	P	-	-
4.1.2. Instruction (Intermediate) **Required Behaviors:** 1. Trains cadre on instructional methods and techniques to ensure the achievement of training objectives 2. Assesses student progress to validate learning objectives are met 3. Performs non-syllabus instruction to provide advanced training skills **Criteria:** *Consistency of Application: Sustained application of competency over time in a variety of situations*							
4.1.2.1. Deliver instructional material IAW applicable syllabi	1			-	-	-	P
4.1.2.2. Identify trainees needs (e.g., UGT, OJT, CT)	1	7		-	-	-	pk

4.1.2.3. Observe trainee instructions	1	7		-	-	-	-
4.1.2.4. Document training progress	1	7		-	-	-	pk
4.1.2.5. Provide feedback to trainee via applicable training records program	1	7		-	-	-	-
4.1.2.6. Observe student behavior during Go/No Go events	2	7		-	-	-	-
4.1.2.7. Validate trainee objective accomplishment	2	7		-	-	-	-
4.1.2.8. Provide feedback	3	7		-	-	-	-
4.1.2.9. Collect research for non-syllabus instructions	3	7		-	-	-	-
4.1.2.10. Develop presentation	3	7		-	-	-	-
4.1.2.11. Conduct presentation	3	7		-	-	-	-
4.1.2.12. Communicate training gap to appropriate agencies	3			-	-	-	-
4.1.3. Instruction (Advanced) **Required Behaviors:** 1. Manages cadre qualification to ensure instructors' methodology meets curriculum and standards objectives 2. Revises test and curriculum to ensure alignment with evolving changes with higher level guidance 3. Pursues educational and development opportunities to network and stay current on educational trends and best practices **Criteria:** *Consistency of Application: Sustained application of competency over time in complex situations*							
4.1.3.1. Certify instructors on course qualifications IAW applicable syllabi	1			-	-	-	-
4.1.3.2. Review instructor training records	1			-	-	-	-
4.1.3.3. Create instructor training plan	1			-	-	-	-
4.1.3.4. Collect guidance from higher-level information	2			-	-	-	-
4.1.3.5. Incorporate higher-level guidance into curriculum	2			-	-	-	-
4.1.3.6. Submit CCR to appropriate levels	2			-	-	-	-
4.1.3.7. Complete instructor advancement courses	3			-	-	-	-
4.1.3.8. Attain AP advancements opportunities	3			-	-	-	-

4.1.4. Instruction (Expert) **Required Behaviors:** 1. Analyzes local Mission Design Series (MDS) specific training to reduce mishaps and mission degradation 2. Advances syllabi changes to develop a curriculum tailored to meet mission requirements 3. Develops instructional standard operating procedures to maintain consistent and efficient delivery of education **Criteria:** *Consistency of Application: Able to innovate and formulate strategies; able to model/guide/teach others the competency of how to apply the competency*							
4.1.4.1. Liaison with local aircrew communities for training advancements	1			-	-	-	-
4.1.4.2. Communicate with MDS Fam for training shortfalls	1			-	-	-	pk
4.1.4.3. Collect data for curriculum changes	2			-	-	-	-
4.1.4.4. Develop curriculum	2			-	-	-	-
4.1.4.5. Analyze training course requirements	3			-	-	-	-
4.1.4.6. Develop standardized student outcomes	3			-	-	-	-
4.2. PARACHUTING **Description**: Demonstrating proficiency in executing parachute jumps while applying physiological principles relevant to high-altitude operations. **Supporting Competencies:** Analytical Thinking, Leadership, Teamwork, Decision Making **TR**: AFI 10-3503, Personnel Parachute Program ; AFMAN 11-420, Static Line Parachuting Techniques and Tactics; AFMAN 11-411, Special Forces Military Free Fall Operations ; ATP 3-18.11; TC 18-11							
4.2.1. Parachuting (Basic) **Required Behaviors:** 1. Demonstrates the steps to prepare for a static line airborne operation 2. Demonstrates the ability to safely exit an aircraft during a static line airborne operation 3. Correlates human factors risks of parachuting to provide relevant training **Criteria**: *Scope: Specific Area*							

4.2.1.1. Execute Emergency Procedures training	1			-	-	-	-
4.2.1.2. Review regulation parachute requirements (e.g., AFMAN 10-3503)	1			-	-	-	-
4.2.1.3. Inspect parachute system	1			-	-	-	-
4.2.1.4. Don parachute system	1			-	-	-	-
4.2.1.5. Perform pre-jump actions on the aircraft	2			-	-	-	-
4.2.1.6. Execute safe aircraft exit	2			-	-	-	-
4.2.1.7. Demonstrate actions under canopy	2			-	-	-	-
4.2.1.8. Execute safe parachute landing	2			-	-	-	-
4.2.1.9. Review AP parachute curriculum and lesson plan	3			-	-	-	-
4.2.1.10. Personalize lesson plans	3			-	-	-	-
4.2.1.11. Review parachute mishaps	3			-	-	-	-
4.2.2. Parachuting (Intermediate) **Required Behaviors:** 1. Demonstrates the steps to prepare for a HALO/HAHO airborne operation 2. Demonstrates the ability to safely exit an aircraft during a HALO/HAHO airborne operation 3. Applies knowledge of parachuting environment and specific physiological demands to mitigate human factors threats **Criteria:** *Consistency of Application - Sustained application of competency over time*							
4.2.2.1. Review applicable policy and requirements	1			-	-	-	-
4.2.2.2. Execute Emergency procedures training	1			-	-	-	-
4.2.2.3. Inspect parachute system	1			-	-	-	-
4.2.2.4. Don parachute system	1			-	-	-	-
4.2.2.5. Perform pre-jump actions on the aircraft	2			-	-	-	-
4.2.2.6. Execute safe aircraft exit	2			-	-	-	-
4.2.2.7. Demonstrate actions in freefall	2			-	-	-	-
4.2.2.8. Demonstrate actions under canopy	2			-	-	-	-
4.2.2.9. Execute safe parachute landing	2			-	-	-	-
4.2.2.10. Review AP parachute curriculum and lesson plan	3	5		-	-	-	-
4.2.2.11. Personalize lesson plans	3			-	-	pk	-
4.2.2.12. Review parachute mishaps	3			-	-	pk	-

4.2.3. Parachuting (Advanced) **Required Behaviors:** 1. Manages risks associated with high-altitude parachuting operations to safely complete a HALO and HAHO airborne operation 2. Liaises with required agencies to safely complete an airborne operation **Criteria:** *Consistency of Application: sustained application of competency over time in complex situations*							
4.2.3.1. Review training records for parachutist	1			-	-	-	-
4.2.3.2. Create parachute training plan	1			-	-	-	-
4.2.3.3. Plan airborne operation	1			-	-	-	-
4.2.3.4. Execute airborne operations	1			-	-	-	-
4.2.3.5. Coordinate required ground support for airborne operation	2			-	-	-	-
4.2.3.6. Coordinate required air support for airborne operation	2			-	-	-	-
4.2.3.7. Perform pre-flight with aircrew	2			-	-	-	-
4.2.4. Parachuting (Expert) **Required Behaviors:** 1. Directs parachute program to ensure safe airborne operations 2. Collaborates with MAJCOM and HAF Personnel Parachute Program Manager (PPPM) to maximize parachute program effectiveness **Criteria:** *Consistency of Application: Able to innovate and formulate strategies; able to model/guide/teach others the competency of how to apply the competency*							
4.2.4.1. Validate training plan	1			-	-	-	-
4.2.4.2. Manage parachutist currency	1			-	-	-	-
4.2.4.3. Request parachutist course attendance	1			-	-	-	-
4.2.4.4. Submit malfunctions and mishaps reports	2			-	-	-	-
4.2.4.5. Coordinate equipment approval requests (e.g., Approved For Use List (AUL))	2			-	-	-	-
4.2.4.6. Disseminate AF Parachute mishaps reports	2			-	-	-	-
4.2.4.7. Validate units programs	2			-	-	-	-

4.3. HIGH-ALTITUDE AIRDROP MISSION SUPPORT (HAAMS) **Description:** Monitoring, assisting, and advising aircrew, operators, and mission essential personnel during unpressurized high-altitude missions. **Supporting Competencies:** Communication, Analytical Thinking, Decision Making, Leadership **TR**: AFMAN 11-409, High Altitude Airdrop Mission Support Capability Program ; AFMAN 11-2C-130HV3, C-130H Operations Procedures ; AFMAN 11-2C-17V3, C-17 Operations Procedures ; AFMAN 11-202V3, Flight Operations ; TO 14-1-1, U.S. Air Force Aircrew Flight Equipment Clothing and Equipment; TO 15X-1-1, Maintenance Instructions; Oxygen Equipment; TO 15X1-4-2-12, Operation and Field Maintenance Instructions With Illustrated Parts Breakdown; Emergency Bail-Out Oxygen Cylinder Assemblies; TO 15X6-4-3-2, Operation and Maintenance Instructions With Illustrated Parts Breakdown; Type MA-1 Portable Breathing Oxygen Assembly; Type A-21 Regulator, M5886-1 Cylinder; TO 33D2-10-135-1, Operation and Maintenance Instructions – Oxygen Mask Test Unit, Part Number 6112300-1 and Part Number 6112300 (Comm Mnl); TO 42B5-1-2, Gas Cylinders (Storage Type) Use, Handling, and Maintenance							
4.3.1. High-Altitude Airdrop Mission Support (HAAMS) (Basic) **Required Behaviors:** 1. Explains roles and responsibilities to execute the operational mission 2. Performs duties with oversight to perform high-altitude sorties **Criteria**: *Scope: Specific Area*							
4.3.1.1. Demonstrate knowledge of Altitude Threats	1			-	pk	pk	-
4.3.1.2. Demonstrate knowledge of HAP Oxygen Equipment	1			-	pk	pk	-
4.3.1.3. Explain the role of HAAMS tech vs IO	1			-	pk	pk	-
4.3.1.4. Review Emergency Procedures Checklist	1			-	-	-	-
4.3.1.5. Review HAAMS Mission Checklist	2			-	-	-	-
4.3.1.6. Complete HAAMS Sortie	2			-	-	-	-

4.3.1.7. Review applicable guidance (e.g., AFMAN 11-2HAAMS V1-3, AFMAN 11-202V3, AFMAN 11-2MDSV3)	2			-	-	pk	-
4.3.2. High-Altitude Airdrop Mission Support (HAAMS) (Intermediate) **Required Behaviors:** 1. Demonstrates in-flight tasks to perform operations 2. Demonstrates pre- and post-mission planning for operations **Criteria:** *Scope: Integration with concerned areas*							
4.3.2.1. Complete Personnel Airdrop Mission	1		+	-	-	-	-
4.3.2.2. Complete Equipment Airdrop Mission	1		+	-	-	-	-
4.3.2.3. Demonstrate Emergency Procedures (e.g., Bold Face)	1		+	-	-	-	-
4.3.2.4. Complete pre-mission checklist	2		+	-	-	-	-
4.3.2.5. Complete post-mission checklist	2		+	-	-	-	-
4.3.3. High-Altitude Airdrop Mission Support (HAAMS) (Advanced) **Required Behaviors:** 1. Assesses and mitigates risks associated with operations to accomplish mission objectives safely 2. Liaises with multiple agencies to safely complete mission objectives **Criteria**: *Scope: Integration with organizational strategies*							
4.3.3.1. Ensure HAAMS aircrew members are current and proficient	1			-	-	-	-
4.3.3.2. Review applicable regulations to ensure legality of mission plan	1			-	-	-	-
4.3.3.3. Communicate with applicable agencies (e.g., user group, Aircraft Commander, SG)	2			-	-	-	-
4.3.3.4. Communicate with chain of command for mission effectiveness (e.g., risk, shortfalls, best practice)	2			-	-	-	-
4.3.4. High-Altitude Airdrop Mission Support (Expert) **Required Behaviors:** 1. Directs program to ensure the safety of flight for high altitude operations 2. Collaborates with MAJCOM and HAF to maximize the DoD HAAMS program effectiveness **Criteria:** *Scope: Integration with AF-level/within industry*							

4.3.4.1. Manage user group contingency and non-contingency taskings	1			-	-	-	-
4.3.4.2. Manage HAAMS program publications and policies	1			-	-	-	-
4.3.4.3. Validate HAAMS Aircrew Member training requirements (e.g., CT, CFETP, UGT)	1			-	-	-	-
4.3.4.4. Coordinate with outside agencies for resourcing (e.g., manpower, funding)	2			-	-	-	-
4.3.4.5. Act on reported mission effectiveness items (e.g., risk, shortfalls, best practice)	2			-	-	-	-
4.4. NON-CEA **Description:** The process of applying Aerospace Physiology operational and aircrew breathing system knowledge to integrate personnel into direct weapon system support roles. **Supporting Competencies:** Communication, Information Seeking, Critical Thinking, Analytical Thinking **TR**: AFMAN 11-402, Aviation and Parachutist Service ; DAFMAN 11-401, Aviation Management ; AFMAN 11-301V1, Aircrew Flight Equipment (AFE) ; AFMAN 11-202V1, Aircrew Training ; TO 00-5-1, AF Technical Order System ; TO 00-20-1, Aerospace Equipment Maintenance Inspection, Documentation, Policy and Procedures							
4.4.1. Non-CEA (Basic) **Required Behaviors:** 1. Obtains universal aircraft qualifications to perform in-flight duties 2. Demonstrates ability to execute flight duties to meet training and developmental objectives **Criteria:** *Depth of Knowledge - Established practice with some workplace elements*							
4.4.1.1. Review enterprise flying training requirements	1			-	-	pk	-
4.4.1.2. Complete x-prefix pre-requisites and administration functions (e.g., ground training, AFE initial issue, initial open book	1			-	-	-	-
4.4.1.3. Perform flying continuation sorties (e.g., pre- and post-mission briefs)	2			-	-	-	-
4.4.1.4. Maintain individual flight record (e.g., aircrew training record, FCIF's)	2			-	-	-	-

4.4.2. Non-CEA (Intermediate) **Required Behaviors:** 1. Trains personnel on flight duties to develop competencies 2. Applies knowledge to aircrew on Mission Design Series (MDS) specific physiological demands to mitigate human factors threats **Criteria:** *Depth of Knowledge - Established practices of all workplace elements*							
4.4.2.1. Facilitate flying continuation training requirements with trainee	1			-	-	-	pk
4.4.2.2. Review flying fundamentals (e.g., hypoxia, crew coordination, oxygen systems)	1			-	-	-	pk
4.4.2.3. Incorporate flying experiences to platform instruction	2			-	-	-	P
4.4.2.4. Advise aircrew on aircraft specific threats and human performance factors	2			-	-	-	P
4.4.2.5. Utilize AFSAS	2			-	-	-	P
4.4.2.6. Discuss aircraft mishap reports	2			-	-	-	P
4.4.3. Non-CEA (Advanced) **Required Behaviors:** 1. Evaluates challenges within the MDS to ensure relevant training is provided by instructors 2. Directs standardization of flight duties to ensure conformance with prescribed aircrew procedures **Criteria:** *Depth of Knowledge - New practices of all workplace elements*							
4.4.3.1. Assess instructor MDS knowledge of local airframes	1			-	-	-	-
4.4.3.2. Communicate with chain of command for mission effectiveness (e.g., risk, shortfalls, best practice)	1			-	-	-	-
4.4.3.3. Communicate trends and CT needs to appropriate agencies (e.g., Stan/Eval, AFE, SERE, aircrew, SG)	2			-	-	-	-
4.4.3.4. Manage Non-CEA program publications and policies	2			-	-	-	-
4.4.4. Non-CEA (Expert) **Required Behaviors:** 1. Oversees flying training program to ensure unit readiness 2. Collaborates with the flight safety office to provide human factors analysis for mishap investigations **Criteria:** *Depth of Knowledge - New practices/concepts and theories of all workplace elements; is a credible resource in this area*							

4.4.4.1. Manage Non-CEA requirements (e.g., SERE, centrifuge, flying currency)	1			-	-	-	-
4.4.4.2. Monitor compliance to Non-CEA requirements (e.g., instructor aircrew flight record)	1			-	-	-	-
4.4.4.3. Develop continuation trainings	1			-	-	-	-
4.4.4.4. Communicate trends and CT needs with MAJCOM/HAF	1			-	-	-	-
4.4.4.5. Communicate human factor trends to reduce mishaps (i.e. attend flight safety meetings)	2			-	-	-	-
4.4.4.6. Aid Safety (e.g., SIB, AIB, MINA, AMIC)	2			-	-	-	-
5. RESOURCE MANAGEMENT							
5.1. RESOURCE MANAGMENT **Description:** The allocation and utilization of personnel, programs, equipment, infrastructure, and budgetary requirements to meet mission objectives. **Supporting Competencies:** Communication, Creative Thinking, Decision Making, Develops People **TR**: DAFI 65-601V1, Budget Guidance and Procedures ; AFI 65-601V2, Budget Management for Operations ; AFI 38-101, Manpower and Organization ; DoD FMR 7000.14-R Vol 12 Ch 7, Financial Liability for Government Property Lost, Damaged, Destroyed, or Stolen ; DoDI 5000.64_DAFI 23-111, Accountability and Management of DoD Equipment and Other Accountable Property ; TO 00-20-3, Maint Processing of Repairable Property and Repair of Cycle Asset Control Sys							
5.1.1. Resource Management (Basic) **Required Behaviors:** 1. Identifies opportunities and threats to ensure the efficiency and effectiveness of resource utilization 2. Monitors assigned duties and deadlines to ensure mission accomplishment 3. Maintains equipment and infrastructure (facilities, devices, etc.) to ensure adherence to safety protocols 4. Pursues training courses, workshops, and educational opportunities to enhance readiness **Criteria:** *Scope: Specific Area*							
5.1.1.1. Communicate needs	1	5		-	-	-	-
5.1.1.2. Accomplish all required training IAW local guidance	1			-	-	-	-

5.1.1.3. Demonstrate time management	2			-	pk	-	-
5.1.1.4. Prioritize tasks	2			-	pk	-	-
5.1.1.5. Conduct inspections	3	5		-	pk	-	-
5.1.1.6. Communicate equipment or infrastructure status	3			-	pk	-	-
5.1.1.7. Verify supply and equipment items are properly maintained and safeguarded	3			-	pk	-	-
5.1.1.8. Identify required training	4			-	-	-	-
5.1.1.9. Complete required training	4			-	-	-	-
5.1.2. Resource Management (Intermediate) **Required Behaviors:** 1. Communicates expectations, provides feedback, and resolves conflicts to create a positive work culture to drive performance 2. Manages personnel, inventory, budget and coordinates logistical support to ensure resources are mission-ready 3. Conducts professional development need assessment on personnel to ensure mission readiness **Criteria:** *Scope: Integration with concerned areas*							
5.1.2.1. Establish standards and expectations	1			-	-	-	-
5.1.2.2. Managing interpersonal relations	1			-	-	-	-
5.1.2.3. Forecast unit needs (e.g., resources, funding, equipment)	2			-	-	-	pk
5.1.2.4. Communicate resource needs to higher level	2			-	-	-	pk
5.1.2.5. Identify professional development opportunities	2			-	-	-	K
5.1.2.6. Review personnel records for development gaps	2			-	-	-	pk
5.1.3. Resource Management (Advanced) **Required Behaviors:** 1. Designs organizational structure and delegates authority to create a framework that enables efficient and effective performance 2. Assesses staffing needs and oversees duty assignments, and deployments to ensure personnel are trained and qualified 3. Collaborates with other units and agencies as needed to leverage resources and support operations **Criteria:** *Scope: Integration with organizational strategies*							
5.1.3.1. Identify organizational gaps	1			-	-	-	K

5.1.3.2. Implement organizational changes	1			-	-	-	-
5.1.3.3. Forecast training and development needs	2			-	-	-	-
5.1.3.4. Oversee training program	2			-	-	-	-
5.1.3.5. Liaise for needs with appropriate agencies	3			-	-	-	-
5.1.3.6. Prioritize needs and resources	3			-	-	-	-
5.1.4. Resource Management (Expert) **Required Behaviors:** 1. Develops communication channels to coordinate resource management efforts in support of operations 2. Advocates for adequate resource allocation to ensure successful mission accomplishment 3. Provides strategic direction in functional areas to optimize the use of available resources **Criteria:** *Scope: Integration with AF-level/within industry*							
5.1.4.1. Develop strategic communication plan	1			-	-	-	-
5.1.4.2. Develop business rules	1			-	-	-	-
5.1.4.3. Manage training requirements	2			-	-	-	-
5.1.4.4. Attend strategic conference and meetings (e.g., CAPE, STRT, OPTs)	2			-	-	-	-
5.1.4.5. Liaise for needs with appropriate agencies (e.g., POM, PEM)	3			-	-	-	-
5.1.4.6. Develop policy	3			-	-	-	-
5.1.4.7. Communicate directives and initiatives	3			-	-	-	-

Attachment 3
STS Application Matrix
NOTE: See Attachment 1, paragraph A1.6, for detailed instructions on how to read and apply these matrices.

Training Device: Management															
STS Line Item	**PMEL**	**HAZMAT / HAZCOM**	**Aircrew Flight Equipment**	**Altitude Chamber**	**ROBD**	**HFT**	**Barany Chair**	**Centrifuge**	**AFTO Form 334**	**AFTO Form 244**	**AFTO Form 245**	**AFTO Form 95**	**ETIMS**	**Safety**	**Supply**
1.1.1.1. Locate applicable guidance (i.e., ETIMS, SDS, JSTO, etc.)			3	3	3	3							3	3	
1.1.1.4. Locate applicable guidance for support programs (i.e., PMEL, Equipment Custodian, HAZMAT, etc.)		3, 5													3, 5
1.1.1.8. Annotate forms (basic)									3	3	3	3			
1.1.2.2. Perform program guidance (i.e. ROBD, Chamber, AFE, HAZMAT, PMEL, etc.) (intermediate)			3	3	3, 5	3									

Training Device: Maintenance																				
STS Line Item	**SD Trainer**	**Altitude Chamber (Daily)**	**Altitude Chamber Vacuum Pump**	**Altitude Chamber Chiller**	**Altitude Chamber RD Valve**	**Altitude Chamber Air Compressor**	**Altitude Chamber MA-1 Recharging Whips**	**Altitude Chamber Communication System**	**Altitude Chamber Oxygen Regulators (CRU-79)**	**Reduced Oxygen Breathing Device (ROBD)**	**Hypoxia Familiarization Trainer (HFT)**	**Parachute Operations Hypoxia Familiarization Trainer (POHFT)**	**Mission Crew Trainer (MCT)**	**Centrifuge**	**HGU-55/P**	**CRU-60/P**	**Quick-Don**	**MBU-12/P**	**MBU-20/P**	**MA-1 Portable Oxygen**
1.2.1.1. Complete orientation of device (basic)		3								3	3				3	3		3	3	
1.2.1.2. Locate applicable guidance (i.e. ETIMS, Lead Command SharePoint, etc.) (basic)		3								3	3				3	3		3	3	
1.2.1.4. Observe inspection of device		3								3	3				3	3		3	3	
1.2.1.5. Conduct Inspection under certified supervision (basic)		3								3	3				3	3		3	3	

1.2.1.10. Brief trainer/supervisor on device operations (basic)		3								3	3				3	3		3	3	
1.2.2.1. Perform device inspection (intermediate)										3	3				3	3		3	3	
1.2.2.2. Perform troubleshooting procedures (intermediate)										3	3				3	3		3	3	
1.2.2.4. Demonstrate knowledge of equipment facts and principles (intermediate)										3	3				3	3		3	3	

Training Device: Operations																
STS Line Item	**Run SDT Profiles**	**SDT Operator**	**SDT Lecturer**	**Altitude Chamber Inside Observer (IO)**	**Altitude Chamber Crew Chief**	**Altitude Chamber Operator**	**Altitude Chamber Lock Operator**	**Altitude Chamber Recorder**	**ROBD**	**ROBD Instructor/Observer (I/O)**	**HFT**	**POHFT**	**Barany Chair**	**Centrifuge Lecturer**	**Centrifuge Operator**	**Centrifuge Crew Chief**	**Centrifuge Swingman**
1.3.1.3. Operate applicable devices under certified supervision (i.e. Altitude Chamber, ROBD, HFT, etc.) (basic)				3					3	3	3		3				
1.3.1.6. Demonstrate ability to respond to applicable EP	[redacted]			3					3, 5	3, 5	[redacted]						

1.3.2.1. Operate applicable devices (i.e. Altitude Chamber, ROBD, HFT, etc.) (intermediate)				3					3	3	3		3				

Administration					
STS Line Item	**AF Form 1522**	**DD Form 114**	**DD Form 2992**	**Individual Data Summary (IDS)**	**Individual Training Summary (ITS)**
2.1.1.2. Evaluate forms and documentation IAW with applicable guidance (i.e., DD Form 2992, AF Form 1522/IDS, etc.)	3, 5	3, 5	3, 5	3, 5	3, 5
2.1.1.4. Prepares applicable documentation (AF Form 1522, DD Form 114, etc.) (basic)	3, 5	3, 5			

Aircrew Operations: Instruction																									
STS Line Item	**Altitude Chamber Lecture**	**ROBD Lecture**	**Respiration and Circulation**	**Human Factors in Aviation**	**Introduction to Atmosphere**	**Physiological Effects of Altitude**	**Attention Management Threats to Situational Awareness**	**Vision**	**Unaided Night Vision**	**Physiological Considerations of Aircrew Breathing Systems**	**Cabin Pressurization and Decompression**	**Performance Threats**	**Spatial Disorientation**	**Noise and Vibration**	**Acceleration**	**Physiological Considerations of Aircraft Egress**	**Oxygen Equipment Lab**	**AP Initial Course**	**AP Parachutist Initial Course**	**RPA Initial**	**Track A**	**Track T**	**Track R**	**Track H**	**Track J**	**Track E**
4.1.1.5. Prepare personalized lesson plan for ALL blocks of instruction IAW AETC Aerospace Physiology Training Syllabus – Initial (basic)			3	3	3	3	3	3		3	3	3	3	3	3	3										
4.1.1.8. Demonstrate practical lab with assistance (basic)		3, 5							3								3									
4.1.1.10. Observe instructions		3	3	3	3	3	3	3	3	3	3	3	3	3	3	3	3	3			3	3			3	
4.1.1.11. Deliver presentations with assistance (basic)			3	3	3	3	3	3		3	3	3	3	3	3	3										

4.1.2.1. Deliver instructional material IAW applicable syllabi (intermediate)																	7			7	7				
4.1.2.6. Observe student behavior during Go/No Go events (intermediate)																	7			7	7				

Non-CEA	
STS Line Item	**Sorties**
4.4.1.3. Perform flying continuation sorties (e.g., pre- and post-mission briefs) (2)	5

SECTION B – COURSE OBJECTIVE LIST

3. Contains the course Objective List and training standards supervisors use to determine if Airmen satisfied training requirements from that APA course.

COURSE CHART, L3ABP1H031 00AC - TABLE II - TRAINING CONTENT
Course Material – UNCLASS

Block I - Administration		18 Hours TT
1.	Orientation	(2 hrs)
2.	AP Guidance	(2 hrs)
3.	Records Management	(2 hrs)
4.	AP Forms	(9 hrs)
5.	Training Needs & Etiquette	(3 hrs)
		18 Hours Total
Block II - Aircrew Operations		73 Hours TT
1.	Instruction Requirements	(61 hrs)
2.	Safety Mishaps	(8 hrs)
3.	Initial Course Prep	(4 hrs)
		73 Hours Total
Block III - Training Devices-Management		9 Hours TT
1. Training Devices- Management		(9 hrs)
		9 Hours Total
Block IV - Training Devices- Maintenance		164 Hours TT

1.	Device Inspections	(20 hrs)
2.	Device Inspection and Knowledge	(144 hrs)
		164 Hours Total
Block V - Training Devices- Operations		185 Hours TT
1. Emergency Procedures		(185 hrs)
		185 Hours Total
Block VI - Aerospace Physiology Programs		10 Hours TT
1.	Standardization & Evaluation	(2 hrs)
2.	Quality Assurance	(2 hrs)
3.	Resource Management	(4 hrs)
4.	Evaluation	(2 hrs)
		10 Hours Total
Block VII - Aerospace Physiology Sections		69 Hours TT
1.	HIGH-ALTITUDE AIRDROP MISSION SUPPORT	(40 hrs)
2.	Aerospace Physiology Training Team	(3 hrs)
3.	High Altitude Intelligence Reconnaissance Surveillance	(2 hrs)
4.	Centrifuge	(24 hrs)
		69 Hours Total
Block VIII - Aerospace Physiology Initial Course Teaching		100 Hours TT
1. Physiology Initial Course		(100 hrs)
		100 Hours Total
IX - Course EOC and Graduation		2 Hours TT
1.	EOC	(1 hrs)
2.	Out Processing and Graduation	(1 hrs)
		2 Hours Total

Summary of changes: This revised Aerospace Physiology (AFSC 1H0X1) course, aligned with the Occupational Competency Model, was developed from a draft Specialty Training Standard (STS) dated 5 September 2025, which resulted from a Specialty Training Requirements Team (STRT) held 30 June–2 July 2025. The curriculum prepares three-level Airmen for Aerospace Physiology Technician (APT) assignments, specifically focusing on qualifying them to support 13H officers in Reduced Oxygen Breathing Device (ROBD) units.

SECTION C – SUPPORT MATERIALS

4. Support Materials. None

SECTION D – TRAINING COURSE INDEX

5. Purpose. This section of the CFETP identifies training courses available for the 1H0X1 specialty. For further information on the following courses in Table 8 and 9, contact the OPR as indicated:

OPR: 12 TRS Det 1
1015 Femoyer St., Building 10900
Lackland AFB, TX 78236
DSN: 473-4731
Website: https://usaf.dps.mil/teams/app10-etca/App/index.aspx/cfrm?itemID=5762&orgparam=AETC

OPR: USAF Safety Center
9700 G Avenue SE, Building 24499
Kirkland AFB, NM
DSN: 246-1613/9511/4093/9511/1449
Website: https://www.safety.af.mil/

OPR: 336 TRSS/OSFA
Building 1256 Bud Day

CFETP 1H0X1

Fairchild AFB, WA 99011

Website: (SV85A) https://usaf.dps.mil/teams/app10-etca/App/index.aspx/cfrm?itemID=4608&orgparam=AETC

(SV97A) https://usaf.dps.mil/teams/app10-etca/App/index.aspx/cfrm?itemID=5210&orgparam=AETC

Table 8. Air Force In-Residence Courses, Mandatory training for upgrade.

Course ID	Course Title	Location	OPR
*L3AQR1H011 00AB	Career Enlisted Aviator Fundamentals Course (CEAFC)	Lackland AFB, TX	12 TRS Det 1
L3ABP1H031 00AB	Aerospace Physiology Apprentice (APA) course	Wright Patterson AFB, OH	12 TRS Det 1
SV85A	Emergency Parachute and Water Survival Training	Fairchild AFB, WA	336 TRSS/OSFA
SV97A	Advanced Level-B SERE Skills Training	Fairchild AFB, WA	336 TRSS/OSFA
NVGAIC	USAF NVG Academic Instructor Course	Wright Patterson AFB, OH	342 TRS
L3ACP1H071 00AB	Aerospace Physiology Craftsman (APC) course	Wright Patterson AFB, OH	12 TRS Det 1
*Formally known as L3AQR1H011 01AC, Air Crew Fundamentals Course (AFC). Curriculum modified in 2024.

SECTION E – MAJOR COMMAND UNIQUE REQUIREMENTS

None identified.

SECTION F – TECHNICAL REFERENCES

6. Purpose. The individual objectives in this STS may use one or more TR's for Courseware Development and/or OJT. Requests to add a new TR can be approved by HAF/A34P, CFM, 1H0X1 upon request. In a case where a TR is updated, revised, replaced or rescinded the CFM, 1H0X1 makes a determination in regards to the use of that TR.

Attachment 4
ABBREVIATIONS AND TERMS EXPLAINED

342 Training Readiness Squadron (TRS). Located at Wright Patterson AFB, OH, provides AP initial skills training through award of the 3-skill level, the Career Development Course (CDC) for the 5-skill level and fulfills requirements via the AP Craftsman course required of the 7-skill level.

Advanced Training. A formal course which provides individuals, who are qualified in one or more positions of their Air Force Specialty (AFS), with additional skills/knowledge to enhance their expertise in the career field.

Air Force Enlisted Classification Directory (AFECD). The official directory for all military enlisted classification descriptions, codes, and identifiers. Establishes the occupational structure of the Air Force enlisted force. The occupational structure is flexible to permit enlisted personnel to specialize and develop their skills and abilities while allowing the Air Force to meet changing mission requirements. Individual enlisted personnel have a joint responsibility with commanders and supervisors at all levels to fully develop their abilities consistent with Air Force needs and within the established patterns of specialization.

Air Force Job Qualification Standard/Command Job Qualification Standard (AFJQS/CJQS). A comprehensive task list that describes a particular job type or duty position used by supervisors to document task qualifications. The tasks on AFJQS/CJQS are common to all persons serving in the described duty position.

Air Force Specialty (AFS). An occupational specialty in the Department of the Air Force.

Aerospace Physiology Training Team (APTT). The APTT consists of 2 to 6 Aerospace Physiology personnel which provide input to wing commanders on human performance issues which may negatively impact combat capability. They assist in Operational Risk Management. They provide local oxygen systems and wing safety consultation on theater specific human factors and human performance issues. They develop human performance related threat briefs specific to the theater of operation based on local intelligence analysis, weather, and other operational/environmental conditions to increase mission effectiveness. The team also supports regional aircrews with aerospace physiology and human performance/human factors enhancement training.

Basic Aircraft Qualification (BAQ). An aircrew member who has satisfactorily completed training prescribed to maintain the skills necessary to perform aircrew duties in the unit aircraft.

Basic Mission Capable (BMC). An aircrew member who has satisfactorily completed mission qualification training, is qualified in some aspect of the unit mission, but does not maintain Mission Ready (MR), Combat Mission Ready (CMR) status.

Basic Qualification (BQ). A status of an aircrew member who has satisfactorily completed the basic training prescribed to maintain the skills necessary to fly on the unit aircraft. The member must perform at the minimum frequency necessary to meet the most recent sortie and flight standards set for that weapons system.

Career Enlisted Aviator (CEA). An aircrew member in any of the 1AXXX or 1UXXX career fields.

Career Enlisted Aviator Fundamentals Course (CEAFC). A course designed to prepare enlisted personnel for their transition to a career in aviation. Knowledge presented in the course includes physiological, survival, aircrew mission, anti- hijacking and anti-terrorism, aircrew coordination, aircrew training, basic aerodynamics, aircraft publications, safety and flight medicine. This course screens for the ability to handle the rigor of aircrew duties prior to candidates entering expensive follow-on training.

Career Development Course (CDC). Self-study correspondence course to provide Airmen fundamental knowledge of their AFS.

Career Field Education and Training Plan (CFETP). A CFETP is a comprehensive, multi-purpose document encapsulating the entire spectrum of education and training for a career field. It outlines a logical growth plan that includes training resources and is designed to make career field training identifiable, eliminate duplication, and ensure this training is budget defensible.

Career Field Manager (CFM). Representative appointed by the respective HQ USAF Deputy Chief of Staff or Under Secretariat, to ensure assigned AF specialties are trained and utilized to support AF mission requirements. The CFM is a CMSgt in the career field. This individual has the responsibility of writing the CFETP, reviewing and updating the CFETP periodically, working with the respective AETC training pipeline manager (TPM) and Training Manager (TM) and 342 TRS to ensure technical training meets the needs of the career field. Additionally, the CFM works with the Curriculum and Production Manager to update CDC material to meet the ever-changing needs of the career field. The CFM is also the waiver authority for matters concerning personnel who fail to meet upgrade standards.

Continuation Training (CT). Additional training exceeding formalized requirements with emphasis on present or future duty assignments. The continuation training program provides individuals with the volume, frequency, and mix of training necessary to maintain proficiency.

Core Task. Identifies the minimum qualification requirement for all personnel within an AFS, regardless of duty position.

Course Training Standard (CTS). A document identifying the training tasks in a specific course.

Crew Resource Management (CRM). The effective use of all available resources, people, weapon systems, facilities and equipment, and environment - by individuals or crews to safely and efficiently accomplish an assigned mission or task. The term "CRM" is used to refer to the training program, objectives, and key skills directed for successful mission accomplishment while in the performance of flight duties.

Distance Learning (DL). Training that is exported, such as from a resident course to a field location for trainees to complete without the on-site support of the formal school instructor. Includes video tele-seminar (VTS), video tele-training (VTT), and computer-based training (CBT).

Enabling Learning Objective (ELO). An ELO states the instructor's expectations of student performance and the steps in accomplishing the Terminal Learning Objective (TLO).

Enlisted Specialty Training (EST). A mix of formal training (technical school) and informal training (on-the-job) to qualify and upgrade airmen in each skill-level of a specialty.

Education and Training Course Announcements (ETCA). The ETCA, located at https://usaf.dps.mil/teams/app10-etca/SitePages/home.aspx?isdlg=1, contains specific MAJCOM procedures, fund citations, reporting instructions, and listings for formal courses conducted or managed by the MAJCOMs or field operating agencies (FOAs).

Faculty Folder. A folder required as a Community College of the Air Force (CCAF) instructor, to monitor initial and qualification training, as well as subject matter qualification training. All documentation concerning evaluations, practicum, college transcripts, CCAF progress reports, and degree contracts are to be maintained, depending on specific requirements listed in the current CCAF Campus Relations, Policies, Procedures, and Guidelines.

Flying Training Unit (FTU). Name given to a MAJCOM school conducting flight training.

Functional Area Manager (FAM). Individuals responsible for the management and planning of all personnel and equipment within a specific functional area to support wartime and peacetime contingencies. The FAM for AP is AF/A3T.

Go/No-Go. The "Go" is the stage at which a trainee has gained enough skill, knowledge, and experience to perform the tasks without supervision; meets the task standard. "No-Go" is the stage at which the trainee has not gained enough skill, knowledge, and experience to perform tasks without supervision; does not meet task standard.

High Altitude Airdrop Mission Support (HAAMS). Operations involving Aerospace Physiology personnel supporting unpressurized aircraft flights to include High Altitude Low Opening (HALO)/High Altitude High Opening (HAHO) personnel and equipment drops, equipment testing and research, humanitarian aid operations, and Psychological Operations (PsyOps) missions in safety and life support monitoring roles.

High Altitude Intelligence Surveillance and Reconnaissance (HAISR). The HAISR program encompasses physiological support provided to U-2 aircraft operations.

Interactive Courseware (ICW). A training program controlled by a computer that relies on trainee input to determine the order and pace of instruction delivery. The trainee advances through the sequence of instructional events by making decisions and selections. The instruction branches according to the trainee's responses.

Initial Qualification Training (IQT). Training needed to qualify personnel as Aerospace Physiology Technicians. This training is accomplished via the CEAFC, APA, and respective SERE courses prior to an airman's first duty assignment.

Initial Skills Training. A formal resident course that results in an award of the entry level AFSC (e.g. Aerospace Physiology Apprentice course).

Instructional Systems Design (ISD). ISD is the systematic development of instructional specifications using learning and instructional theory to ensure the quality of instruction. It is the entire process of analysis of learning needs and goals and the development of a delivery system to meet those needs. Includes implementing, validating, managing, and reviewing instructional programs. Ensures personnel are taught the knowledge, attitudes, and skills essential for successful job performance in the most cost-efficient manner.

Lead Command. A MAJCOM responsible for an assigned weapons system. Lead Commands establish advocacy for designated weapon systems during their life cycle and clarify responsibilities for all using and supporting organizations. They provide primary input into the process of developing and maintaining a force structure with a balance for complementary capabilities.

MAJCOM Functional Manager (MFM). Primary focal point and liaison between the MAJCOM and HQ USAF on all matters relating to the career field within the command. This includes, but is not limited to, responsibility for the non-career enlisted aviator training programs, coordination on non-rated aircrew resource allocations, and managing education, training, and resources for a specific career field(s) for that MAJCOM.

Major Weapons Systems (MWS). Several like Mission Design Series (MDS) comprise a Major Weapons System (MWS) category (e.g., the bomber MWS is comprised of the B-1, B-2, and B-52 MDSs).

Master Task Listing (MTL). A comprehensive list of all tasks performed within a work center and consisting of the current CFETP or AFJQS and locally developed AF Form 797, *Job Qualification Standard Continuation/Command JQS.* As a minimum it identifies all tasks performed in the work center. The MTL should include tasks required for deployment and/or UTC requirements. This document can be automated.

Master Training Plan (MTP). A comprehensive training plan for a work center. It will include the MTL, AFJQS, CFETP, QTP, AF Form 797, task breakdowns, commercial publications, milestones for completion and any other documents that supports training.

Mission Ready (MR). An aircrew member who has satisfactorily completed mission qualification training and maintains qualification and proficiency in the command or unit operational mission.

Mission Qualification Training (MQT). MQT is a MAJCOM approved unit specific program and requirements must be completed prior to operating as a mission qualified AP Technician.

Non-Career Enlisted Aviator (non-CEA). A non-CEA is a non-rated aircrew member.

Occupational Analysis Survey. A survey comprised of occupational tasks performed within a particular AFS.

Occupational Survey Report (OSR). A detailed report showing the results of an occupational survey.

On-the-Job Training (OJT). A delivery method used to certify personnel in both upgrade (skill level award) and job qualification (duty position certification) training. It is hands-on, over-the-shoulder training conducted at the duty location.

Practicum. A means of receiving college credits through Community College of the Air Force (CCAF) Teaching Technology Associate's Degree Program for formal schoolhouse instructors. It covers a wide variety of subjects beyond initial instructor qualification.

Proficiency Training. Training designed to reinforce existing qualifications. Includes additional training, exceeding initial training requirements, with emphasis on present or future duty assignments.

Qualification Training. Actual hands-on, task performance-based training designed to qualify an individual in a specific duty position. This portion, of the dual channel on-the-job training program, occurs both during and after the upgrade training process. It is designed to provide the performance skill/knowledge training required to do the job.

Qualification Training Package (QTP). An instructional package of materials designed for use at the unit to qualify, and/or aid qualification, in a duty position or program, or on a piece of equipment. It may be printed, computer-based, or in some other type of audiovisual media.

Resource Constraints. Resource deficiencies, such as money, facilities, time, manpower, and equipment that preclude desired training from being delivered.

Skills Training. A formal course which results in the award of a skill level.

Specialty Training. A mix of formal training (technical school) and informal training (OJT) to qualify and upgrade Airmen in the award of a skill level.

Specialty Training Requirements Team (STRT). A team comprised of the CFM and SMEs who meet prior to a Utilization and Training Workshop. The primary purpose of the STRT is for the CFM and functional leaders to determine and present training requirements to AETC and to the Technical Training Schoolhouse.

Specialty Training Standard (STS). An Air Force publication that describes an Air Force specialty in terms of tasks and knowledge that an airman in that specialty is expected to perform or to know on the job. Also identifies the training provided to achieve a 3-, 5-, or 7-skill level within an enlisted AFS. It further serves as a contract between Air Education and Training Command (AETC) and the functional user to show which of the overall training requirements for an Air Force Specialty Code (AFSC) will be taught in formal schools and which will be taught by Career Development Courses (CDC).

Standard. An exact value, a physical entity, or an abstract concept, established and defined by authority, custom, or common consent to serve as a reference, model, or rule in measuring quantities or qualities, establishing practices or procedures, or evaluating results. A fixed quantity or quality.

Subject Matter Expert (SME). An individual qualified in a particular specialty and who is consulted with for his or her subject matter expertise or knowledge of the specialty.

Syllabus. Published outline of training required to achieve the proficiency specified in the course training standards for a specific course. It prescribes the course content, instructions to conduct the training, and the approximate time necessary to successfully complete all requirements. A formal syllabus may be published to include IQT, MQT, CT, and other training as determined by the training command, MAJCOM, or unit. (Formal and standardized syllabus are used primarily in AETC formal or developed courses.)

Task Module (TM). A group of tasks performed within an AFS that are performed together and that require common knowledge, skills, and abilities. TMs are identified by an identification code and statement.

Training Capacity. The capability of a training setting to provide training on specified requirements based on the availability of resources.

Terminal Learning Objective (TLO). A TLO states the instructor's expectations of student performance at the end of a specific lesson or unit. Each TLO includes a condition, task, and a standard.

Teaching Internship. A CCAF approved student teaching course, consisting of at least 120 contact hours of classroom, aircraft, and/or laboratory instruction and an additional 60 hours of lesson plan preparation, use of

audiovisual aids, test administration, academic counseling of students, instructor performance feedback, and subject matter testing.

Technical Reference (TR). Technical References can be in various formats and can be military in origin/nature or commercial products. For the purposes of this document, they have been deemed necessary to attain the proficiency identified in the STS and are indexed in Part II of the CFETP, Section F, and Table 10.

Upgrade Training (UGT). Mandatory training which leads to the award of a higher skill level.

Utilization and Training Workshop (U&TW). A forum of the CFM, MFMs, and AETC to determine career field training requirements. U&TW is an executive decision meeting used to resolve resource issues.

Wartime Tasks. Those tasks that must be taught when courses are accelerated in a wartime environment. In response to a wartime scenario, these tasks will be taught in the 3-skill level course in a streamlined training environment. These tasks are only for those career fields that still need them applied to their schoolhouse tasks.
