This instruction implements policy and guidance in Department of the Air Force Instruction (DAFI) 23-201, *Fuels Management*. This regulation prescribes responsibilities and procedures for receiving, issuing, and maintaining an adequate stock of liquid oxygen (LOX). It applies to all units and agencies that utilize LOX assigned to or attached to Tinker Air Force Base (AFB). This publication does apply to Air Force Reserve Command (AFRC) Units. This publication does apply to the Air National Guard (ANG). Refer recommended changes and questions about this publication to the Office of Primary Responsibility (OPR) using the DAF Form 847, *Recommendation for Change of Publication*; route DAF Form 847s through publications/forms managers. This publication may not be supplemented or further implemented/extended; nor will waivers be granted for any part of this instruction. Ensure that all records created as a result of processes prescribed in this publication adhere to Air Force Instruction (AFI) 33-322, *Records Management and Information Governance Program*, and are disposed of in accordance with (IAW) the Air Force Records Disposition Schedule (RDS), which is located in the Air Force Records Information Management System (AFRIMS).

SUMMARY OF CHANGES

This publication is substantially revised and must be completely reviewed. Major changes include aligning the publication to be IAW DAFI 23-201, establishing a formal Cryogenic Conservation Plan, updating organizational alignment, and updating outdated references and forms.

1. ACCOUNTING FOR BULK QUANTITIES.

1.1. Accounting of liquid oxygen will be maintained by using simultaneous receipt and issue procedures and issuing it to the using organizations on a prorated basis.

1.2. On receipt and acceptance of liquid oxygen from the commercial contract supplier, the Base Fuels Contractor will:

1.2.1. Make sure that proper receipting of the Department of Defense (DD) Form 250, *Material Inspection & Receiving Report*, is accomplished. The Fuels Terminal Manager or designated representative will sign as receiver in block 22.

1.2.2. The Base Fuels Contractor will charge each using organization issues with the appropriate percentage of the receipt as determined through a semi-annual calculation of the percentage of oxygen servicing trailers filled at Bldg. 1052. A contractor representative will forward a locally generated consumption form to the 72 LRS Resource Advisors.

2. CRYOGENIC CONSERVATION PLAN AND MINIMIZING PRODUCT LOSSES.

2.1. Designated Servicing Times: Organizational dispensing carts will be filled Monday-Friday at 1200 hours. Organizations should bring carts requiring filling to Bldg. 1054 before 1200 hours. Filled carts can be picked up after 1500 hours.

2.1.1. Emergency Issues: EMERGENCY issues on swing, graves, and weekend shifts shall be on an on-call basis (Notify the Fuels Service Center, 739-5066). Carts with more than 25 gallons will not be filled under Emergency issue procedures.

2.2. Minimum Cart Limits: Organizations must ensure that the only carts filled are the carts required for aircraft service. To maximize conservation efforts, active carts should be kept to a minimum to prevent excessive losses. Organizations should determine the number of active carts needed to support operations while maintaining inactive carts in a purged, standby status. Carts should only be filled when less than 25 gallons remain in the cart.

2.3. Low Use Definition: A low use trailer is one which was not used to service aircraft in the past 7 calendar days.

2.4. Quality Control: TO 42B6-1-1, *Quality Control of Aviator's Breathing Oxygen*, contains procedures that must be followed when a low use trailer is identified. The organization responsible for servicing the aircraft must utilize the Air Force Technical Order (AFTO) Form 134, *Aviator Breathing Oxygen Servicing Trailer Log*, to identify low use carts, document aircraft servicing operations, and track actions taken when carts are identified as low use.

2.5. FMF Verification: Base Fuels personnel will review AFTO Form 134 to ensure that aircraft servicing's is documented on the form. If the AFTO Form 134 does not contain aircraft servicing data or can be identified as low use, Base Fuels personnel will not fill the cart.

FENCISCO N. HARRIS, Colonel, USAF
Commander
