Supersedes: 94AWI 10-245, 1 May 2006

Pages: 5

This instruction implements AFI 10-245, *Antiterrorism,* Department of Defense Directive (DODD) 2000.12, *Antiterrorism (AT) Program*; Department of Defense Instruction (DODI) 2000.16, *Antiterrorism (AT) Standards* and DoD O-2000.12-H, Antiterrorism *Handbook*. It establishes responsibilities and guidance and outlines procedures and responsibilities for implementing and conducting Random Antiterrorism Measures (RAM's) at Dobbins ARB, GA. It applies to all organizations and personnel assigned or attached to Dobbins Air Reserve Base (ARB). Refer recommended changes and questions about this publication to the Office of Primary Responsibility (OPR) using the AF Form 847, *Recommendation for Change of Publication;* route AF 847 directly to the 94 AW/ATO, Dobbins ARB, GA. Ensure that all records created as a result of processes prescribed in this publication are maintained in accordance with the Air Force Records Disposition Schedule (RDS) located at **https://www.my.af.mil/gcss-af61a/afrims/afrims**/.

SUMMARY OF CHANGES

This document has been substantially revised and must be completely reviewed. It changed from a 94 AW Instruction to a Dobbins ARB Instruction. This revision incorporates changes from the current AFI 10-245 (30 Mar 2009). Electronic recording of RAM's will be utilized to the fullest extent.

1. General: The implementation of RAM's changes the security atmosphere surrounding an installation. A comprehensive and well-developed RAM program will alter the external appearance and security footprint of the installation to terrorists, their supporters who may be

providing surveillance assistance, and criminal elements. RAM programs confront a terrorist or criminal group with an ambiguous and unpredictable situation that will complicate their planning processes for attacks. RAM's test elements of the security system to include Force Protection Conditions (FPCON) measures. As such, they provide training to installation personnel, allow us to evaluate their security effectiveness and determine logistical requirements for FPCON and various security and contingency actions. RAM execution shall be broad based and involve a variety of career fields and personnel. Further this program is in compliance with DoD standard 14 from DoDI 2000.16 and will implement the RAM program according to DoD O-2000.12-H and is applicable to all units on this installation. The RAM program will be included in the current AT Plan 10-245; integrated with all FPCON'S (including FPCON NORMAL), as listed in DoD O-2000.12-H "*DoD Antiterrorism Handbook*" and DoDI 2000-16 "*DoD Antiterrorism (AT) Standards*" which will ensure continuity and standardization among the Air Force should threats require United States Air Force-wide implementation.

2. Concept of Operations: During every FPCON, to include FPCON NORMAL, RAM's will be selected from higher FPCON measures and locally derived measures. Generally speaking, RAM's will be derived from the next two higher FPCONs for implementation in the current FPCON. For example, in FPCON ALPHA, RAM's will generally be selected from FPCON Bravo and Charlie. However, RAM's from FPCON NORMAL are not to be discounted and are encouraged at any FPCON. Additional RAM's that are not FPCON measures may be developed and added to the listing of RAM's. The number of RAMs conducted within a specific time frame shall be at the discretion of the Installation Commander.

2.1. RAM's may be implemented at any time regardless of the current threat posture at the discretion of the Installation Commander.

2.2. RAM's can be used in conjunction with FPCON changes, Crisis Action Checklists and other contingency actions.

2.3. Additional Antiterrorism measures will be incorporated in plans for functions such as change of commands, open house, and organized off-base activities.

3. Procedures: The process in which RAM's will be implemented:

3.1. RAM's will be implemented in a purely random manner during every FPCON level to include FPCON NORMAL so that times for implementation, location and duration will be regularly changed to avoid predictability. In addition to RAM's approved by the Integrated Defense Council (IDC), Unit Antiterrorism representatives (UATRS) should conduct specific RAM's that are relevant to their facilities, surroundings and possible threat. The key to an effective the installation RAM program is the diversity of the schedule and the support of individual work centers tasked to perform them. The UATR will work with the Facility Manager to insure compliance with the required RAM's.

3.2. A listing of RAM's will be continuously reviewed and/or developed by the Installation Antiterrorism Officer (ATO) and/or Antiterrorism Working Group (ATWG). The RAM listing will be revalidated by the Integrated Defense Council (IDC) at least semi-annually and must be endorsed by the 94 AW/CC.

3.3. The Installation Antiterrorism Officer will develop a RAM schedule using the approved RAM listing. This quarterly RAM schedule will be forward to the 94 AW/CC for approval and signature. The RAM schedule will include for each RAM at a minimum the following:

3.3.1. A description of the RAM to be completed.

3.3.2. The date the RAM is to be completed.

3.3.3. The work centers tasked to perform the RAM.

3.3.4. The frequency of the RAM if it is to be conducted more than once.

3.3.5. The RAM schedule may direct the time the RAM is to be conducted or just specify the date, depending on the nature of the RAM.

3.3.6. Any additional instructions or requirements will be posted with the schedule.

3.3.7. All Dobbins ARB units/tenants will comply IAW DoD 2000.16, *Antiterrorism (AT) Standards.*

4. UATR Responsibilities: The UATR will keep a RAM log (e*lectronic recording is acceptable and encouraged*) to record the necessary information. The Installation ATO will compile data from each unit's RAM log and record electronically. The 94 SFS/BDOC will record specific RAM's and fence line checks in the daily blotter.

4.1. Should special needs arise, tasked organizations and work centers will perform their RAM's as ordered by the 94 AW/CC and record the necessary information on the UATR RAM log. Pertinent information concerning the time, location, and results of the RAM will be recorded in the log.

4.1.1. The UATR will notify the ATO by e-mail providing all necessary information after completing the tasked RAM(s) and recorded in the unit log. The UATR will provide the following information: unit performing the tasks, the task number, building number, time and duration of the task and any findings. If while performing a RAM an observation(s) of concern is made; contact the 94 SFS/BDOC at **655-4908/4909** immediately.

4.1.2. If the RAM cannot be performed, the tasked organization will contact the Installation ATO by e-mail and provide all necessary information why the RAM could not be completed. Notification of why the RAM could not be completed should be made by the next working day.

4.1.3. The Installation ATO will conduct random visits to organizations tasked to perform RAM's to provide guidance and assistance in conducting their RAM's and to evaluate the effectiveness of each.

4.1.4. The Installation ATO will monitor, track and analyze RAM implementation efforts and provide the appropriate feedback to the Installation Commander.

5. Recording Format: The RAM recording format is located at \\mgefs04\at. Permission to access this share must be submitted via CAC signed email or a letter to the 94 AW/ATO.

6. Adopted Forms:

AF Form 847, *Recommendation for Change of Publication.*

TIMOTHY E. TARCHICK, Colonel, USAFR
Commander
