Supersedes: AFI16-402, 27 September 2019

Pages: 61

This publication implements Air Force Policy Directive (AFPD) 16-4, *Accounting for Aerospace Vehicles at Units and Installations.* It provides guidance and processes for worldwide programming, assignment, transfer, distribution, accounting, and termination of Air Force (AF) aerospace vehicles. This publication applies to all civilian employees and uniformed members of the Regular Air Force, the Air Force Reserve, the Air National Guard, the Civil Air Patrol when conducting missions as the official Air Force Auxiliary, and those who are contractually obligated to comply with Department of the Air Force (DAF) publications. This publication does not apply to the United States Space Force. Ensure all records generated as a result of processes prescribed in this publication adhere to Air Force Instruction (AFI) 33-322, *Records Management and Information Governance Program*, and are disposed in accordance with the Air Force Records Disposition Schedule, which is located in the Air Force Records Information Management System. Refer recommended changes and questions about this publication to the office of primary responsibility (OPR) using the Department of the Air Force (DAF) Form 847, *Recommendation for Change of Product*; route DAF Forms 847 from the field through the appropriate functional chain of command. The authorities to waive this publication's wing, unit, delta, or garrison level requirements are identified with a Tier ("T-0, T-1, T-2, T-3") number following the compliance statement. This publication may be supplemented at any level, but all supplements must be routed to the OPR of this publication for coordination before certification and approval. Submit requests for waivers through the chain of command to the appropriate tier waiver approval authority or, alternatively, to the publication OPR for non-tiered compliance items. See Department of the Air Force Manual (DAFMAN) 90-161, *Publishing Processes and Procedures*, for a description of the authorities associated with the tier numbers.

SUMMARY OF CHANGES

This document has been revised and should be completely reviewed. Changes include major revisions to office symbols, terminology, websites, and chapters throughout. Additionally, processes have been incorporated to provide clarity, including removal and updates to attachments.

Chapter 1—AEROSPACE VEHICLE FORCE STRUCTURE AND INVENTORY 4

1.1. Overview. 4

1.2. AF Force Structure. 4

1.3. Air Force Programming. 4

Chapter 2—ROLES AND RESPONSIBILITIES 6

2.1. Deputy Assistant of the Air Force for Financial Operation (SAF/FMF). 6

2.2. The Office of the Air Force International Affairs, Policy, Program and Strategic Directorate, International Strategy, Policy, and Training Division (SAF/IAPX), Will: 6

2.3. Deputy Chief of Staff for Plans and Programs (AF/A8). 6

2.4. Deputy Chief of Staff, Directorate of Logistics (AF/A4L). 7

2.5. Deputy Chief of Staff, Directorate of Logistics, Aircraft Maintenance Division (AF/A4LM). 8

2.6. Air Force Aerospace Vehicle Distribution Office (AVDO). 9

2.7. Major Commands (MAJCOMS) and Air Reserve Component (ARC) Programmers. 10

2.8. MAJCOM and ARC AVDOs. 10

2.9. Unit AVDOs. 10

2.10. AFMC/A4, Product Support Management Division (AFMC/A4F). 11

2.11. Systems Program Office (SPOs). 11

2.12. 309TH Aerospace Maintenance and Regeneration Group (AMARG). 13

2.13. National Museum of the United States Air Force (NMUSAF). 14

2.14. Stakeholders and Using Commands. 15

Chapter 3—FORCE STRUCTURE PROGRAMMING FOR AEROSPACE VEHICLES 16

3.1. Force Structure Programming. 16

3.2. Force Structure Programming and Implementation Guidelines. 18

Chapter 4—ACTIVE INVENTORY ASSIGNMENTS AND TRANSFERS 19

4.1. Assignment and Transfer Processes for Active Aerospace Vehicle Inventory. 19

4.2. Serial Number Request Process. 20

4.3. DAF Form 913 Approval Process. 20
4.4. Repair or Retire Decision. 23

Chapter 5—INACTIVE INVENTORY ASSIGNMENTS AND TRANSFERS 25

5.1. Inactive Aerospace Vehicle Inventory Allocations. 25
5.2. DoW Screening Process. 25
5.3. Assignment and Transfer Processes for Inactive Inventory. 25

Chapter 6—TERMINATION OF AEROSPACE VEHICLES FROM AIR FORCE INVENTORY 27

6.1. Reasons for Termination. 27
6.2. Demilitarization, Removal of Hazardous Materials (HAZMAT) Declassification. 27

Chapter 1

AEROSPACE VEHICLE FORCE STRUCTURE AND INVENTORY

1.1. Overview. The Air Force manages aerospace vehicle Force Structure and inventory to meet warfighter needs through planning and programming across the first and second Future Years Defense Program (FYDP). Aerospace vehicles include aircraft, gliders, remotely piloted aircraft (RPA), certain Unmanned Aerial Systems (UAS) Groups, drones, specific missiles, space systems, and aircraft fuselages for ground training and testing. The UAS and RPA aerospace vehicles herein are limited to those in Group 5. For guidance on Groups 1-4, see DAFMAN 11-502, *Group(s) 1 and 2 Small Unmanned Aircraft Systems.* Ground Control Stations (GCSs) are also included for accountability and handling requirements.

1.2. AF Force Structure. Lead Commands/Lead Agents will develop requirements in accordance with (IAW) DAF Policy Directive (DAFPD) 10-9, *Lead Command/Lead Agent Designation and Responsibilities for United States Air Force Weapon Systems, Non-Weapon Systems, and Activities* and submit requirements through the AF Corporate Structure (AFCS) IAW AFPD 90-6, *Air Force Strategy, Planning, Programming, Budgeting, and Execution (SPPBE) Process*. Force structure bed-down decisions will follow DAF Instruction (DAFI) 10-503, *Strategic Basing*.

1.2.1. The Air Force determines its force structure from a strategic portfolio of guidance including Guidance for Development of the Force (GDF), Joint Programming Guidance (JPG), Defense Planning Guidance (DPG), and Strategic Planning Guidance (SPG). The Air Force uses the strategic portfolio to evaluate threats, align strategy with the National Defense Strategy (NDS), and develop integrated future force design options. These options must include capability and risk assessments.

1.2.2. Force structure will be planned within fiscal constraints, and resources will be programmed to provide forces through the FYDP.

1.2.3. The Air Force Corporate Structure (AFCS) must approve the Force Structure through the FYDP to support the required active aircraft inventory to perform operational missions, test, training, and other flight activities.

1.2.4. Inventory will be managed by identifying, validating, and documenting operational mission, test, training, and other weapon system requirements by Major Commands (MAJCOMs) and the Air Reserve Components (ARCs) to support planning and to develop, acquire, and sustain the necessary systems.

1.3. Air Force Programming. This section outlines the lifespan and programming strategy for aerospace vehicles.

1.3.1. The Directorate of Plans and Programs (AF/A8), Lead Commands/Lead Agents, the Weapon System Program Manager (PM), MAJCOM and ARC programmers will collaborate early in the lifecycle to determine the most effective management of aircraft authorizations within each Mission Design Series (MDS) throughout its lifespan. During transition to operational status, the DAF increases training authorizations to support the training needs of aircrew and support personnel as the system becomes operational. The Air Force Personnel Center will align personnel authorizations with the Force Development Plan and direct implementation.

1.3.2. Inventory Programming and Accountability. AF/A8 and Lead Command/Lead Agent Programmers must adjust the inventory balance to meet evolving mission requirements, including training, operational needs, attrition, reserve requirements, basic fleet sustainment needs, and ongoing system development and testing.

1.3.2.1. Active Inventory Programming. Active aircraft must be programmed with authorizations in the Force Structure Worksheet (FSW) after approval through the Program Objective Memorandum (POM) and the Presidential Budget Review (PBR) cycles.

1.3.2.2. Inactive Inventory Programming. Inactive Inventory will be allocated by the Air Force Materiel Command (AFMC) Program Office and the Deputy Chief of Staff, Directorate of Logistics and Maintenance Division (AF/A4LM) per the Department of Defense (referred to as Department of War (DoW) screening process.

1.3.2.3. Accountable Inventory. MDS aircraft and purchased aircraft not managed as MDS are Air Force-accountable aerospace vehicles. All accountable aerospace vehicles must be recorded in an Accountable Property System of Record (APSR).

1.3.2.4. Legal, policy and regulatory compliance. All weapon systems will be reviewed to ensure adherence to international agreements to include arms control agreements and regimes, and required law of war legal reviews, arrangements, etc., IAW DAFPD 10-9 and Air Force Policy Directive (AFPD) 51-4, *Operations and International Law*.

1.3.3. Allocating and Assigning Aerospace Vehicles.

1.3.3.1. *Air Force Deputy Chief of Staff for Logistics, Engineering, and Force Protection (AF/A4)* oversees aircraft *Assignment and Possession* processes IAW DAFI 21-103, *Equipment Inventory, Status, and Utilization Reporting*.

1.3.3.2. AF/A4LM formally documents the allocation of aerospace vehicles to commands, constituting assignment.

1.3.3.3. Lead commands/Lead Agents, in coordination with respective program offices, will allocate aerospace vehicles against programmed authorizations. Allocations must be coordinated with lead and utilizing commands to ensure alignment with the units' mission needs.

1.3.4. Migration Plans. The Air Force directs the development and implementation of aerospace vehicle migration plans. These plans will forecast aerospace vehicle retirements and define procedures for reclamation, disposal, or transfer. (**Attachment 9**)

Chapter 2

ROLES AND RESPONSIBILITIES

2.1. Deputy Assistant of the Air Force for Financial Operation (SAF/FMF). SAF/FMF will coordinate with Deputy Chief of Staff, Directorate of Logistics (AF/A4L) and PMs to maintain financial accountability and compliance with Government Accounting Standards Board (GASB) for all aerospace vehicles.

2.2. The Office of the Air Force International Affairs, Policy, Program and Strategic Directorate, International Strategy, Policy, and Training Division (SAF/IAPX), Will:

2.2.1. Assist Program Offices with developing and executing a comprehensive migration plan, when there is interest in Foreign Military Sales (FMS) Excess Defense Articles (EDA), define requirements, conduct annual reviews of stored vehicles, coordinate disposition plans and parts removal, and represent security assistance interests at AF Strike Board meetings. **(Chapter 6)**

2.2.2. Coordinate with AF/A4LM on all aerospace vehicle cases or leases for approved FMS needing DAF Form 913 *Aerospace Vehicle Project Action*.

2.3. Deputy Chief of Staff for Plans and Programs (AF/A8). Will:

2.3.1. Provide directive and technical guidance for POM submissions, IAW DD Directive 7045.14, *The Planning, Programming, and Execution (PPBE) Process.*

2.3.2. Update the Force Structure Data Management (FSDM) Database for total loss of aircraft IAW DAFI 21-103 using a Change Control Number (CCN) when notified by AF/A4.

2.3.3. Submit planned aerospace vehicle procurements and retirements to AF/A4 for inclusion in the annual Migration Plan update.

2.3.4. Coordinate DAF Form 913s for active inventory assignment changes. Notify AF/A4 of any approved program element code changes.

2.3.5. Approve/disapprove aerospace vehicle repair or retirement recommendation packages.

2.3.5.1. Coordinate Repair or retirement package with Assistant Secretary of the Air Force for Acquisition, Technology, and Logistics (SAF/AQ), and other required organizations.

2.3.5.2. Initiate Program Change Requests (PCR), if required, or assist with unfunded request for repair.

2.3.5.3. Publish the FSW to the AFCS SharePoint after the POM and PBR are finalized.

2.3.6. Oversee migration plans.

2.3.6.1. Align migration plans with force structure, procurement and retirement projections.

2.3.6.2. Validate and provide inputs to AF/A4's migration planning process (i.e. Air Force Strike Board decisions).

2.3.6.3. Standardize data management and reporting for migration plans.

2.3.7. Panel Force Programmers will:

2.3.7.1. Allocate aerospace vehicle assignments against authorized POM listings or approved PCRs.

2.3.7.2. Collaborate with Weapon Systems Program Offices, Lead Commands/Lead Agents, and stakeholders to ensure the FSW, generated by the FSDM database, accurately reflects Weapon System program information.

2.3.7.3. Submit proposed changes to the FSW through the FSDM database using a CCN for review, approval, implementation, and tracking.

2.3.7.4. Submit PCRs for out-of-cycle programming actions through Air Force Directorate of Plans and Programs, Program Integration Division (AF/A8PE) PCR manager using the process described in **Attachment 7**.

2.3.7.5. Generate a CCN for approved PCRs FSDM database tracking.

2.3.7.6. Notify AF/A4LM and Lead Commands/Lead Agents of the approved PCRs.

2.3.8. AF/A8P, in collaboration with Deputy Chief of Staff, Directorate of Logistics (AF/A4L), will translate the approved POM or PCRs into authorized aerospace vehicle positions and minimize differences between the programed and operational fleets.

2.3.9. Panel Force Programming Portfolios. AF/A8 executes its force programming responsibilities through several subordinate panels. These panels manage the following specific aerospace vehicle portfolios:

2.3.9.1. AF/A1XP (Personnel and Training Panel): Manages Trainer and Glider aircraft (T-6, T-7, T-38, T-1, TH-1H) and USAF Academy Airmanship Program aircraft.

2.3.9.2. AF/A8XC (Combat Air Forces Division): Manages Fighter, Attack, and Personnel Recovery aircraft (F-15, F-16, F-22, F-35, A-10, HC-130J, HH-60W).

2.3.9.3. AF/A8PV (C2, EW, GIISR Division): Manages Specialty aircraft (E-3, E-9, E-11, EA-37, RC-135, U-2, WC-135) and Remotely Piloted Aircraft (RQ-4, MQ-9) with their associated Ground Control Stations.

2.3.9.4. AF/A8XM (Mobility Air Forces & Special Operations Forces Division): Manages Mobility aircraft (C/L/W-130, C-17, C-5, KC-135, KC-46), Special Operations aircraft (CV-22, OA-1K, A/M C-130, U-28, C-146), and Special Mission/VIP aircraft (C-21, C-32, C-37, C-40, VC-25).

2.3.9.5. AF/A8XN (Nuclear Deterrence Operations/Nuclear Command and Control (NC3) Division): Manages all Bomber aircraft (B-52, B-1, B-2, B-21), Nuclear Support Aircraft (UH-1N, MH-139), Airborne Operations Centers, and Missiles (Minuteman III, Sentinel).

2.3.9.6. DAF Test & Evaluation Resources Division (DAF/TER): Manages all Research, Development, Test & Evaluation (RDT&E) aircraft. To ensure proper funding alignment for test assets, all other AF/A8 panels must coordinate with DAF/TER on any programming actions involving RDT&E appropriations. DAF/TER is the Test & Evaluation Resources Division of the Air Force Operational Test and Evaluation Center (AFOTEC).

2.4. Deputy Chief of Staff, Directorate of Logistics (AF/A4L). Will:

2.4.1. Establish guidance, processes and procedures for documenting assignment, transfer, distribution, accountability, and termination of Air Force aerospace vehicles.

2.4.2. Approve parts removal requests from Type 1000 “inviolate storage”.

2.4.3. Coordinate requests to retire or repair aircraft due to mishaps or extensive repairs with SAF/AQ.

2.4.4. Obtain retire or repair approval from AF/A8P.

2.4.5. Notify AFMC, Directorate of Logistics, Civil Engineering, Force Protection, and Nuclear Integration (AFMC/A4/A10), the Weapon System Program Office, and Lead Command/Lead Agent Aerospace Vehicle Distribution Officer (AVDO) of the decision.

2.5. Deputy Chief of Staff, Directorate of Logistics, Aircraft Maintenance Division (AF/A4LM). Will:

2.5.1. Process DAF Form 913s to manage aerospace vehicle transfers and status changes. Purpose Identification Codes (PIC) are listed in **Attachment 3** and eight-digit project numbers are listed in **Attachment 4**.

2.5.2. Manage inactive inventory.

2.5.2.1. Screen aerospace vehicles for FMS for DoW requirements before being placed into Type 1000 XS/XT storage.

2.5.2.2. Prioritize Air Force parts needs in accordance with DoDM 4160.21-V1, *Defense Materiel Disposition: Disposal Guidance and Procedures*.

2.5.2.3. Review aerospace vehicles in Type 1000 XS/XT storage with stakeholders during the Air Force Strike Board and Migration Plan development cycle to identify new DoW requirements.

2.5.2.4. Initiate the excess reporting process.

2.5.2.5. Submit the MAJCOM/ARC SF-120 to General Services Administration (GSA) Region 9.

2.5.3. Manage Migration Plans.

2.5.3.1. Obtain inputs from AF/A8P to inform the development of Migration Plans.

2.5.3.2. Develop a plan for every aerospace vehicle programmed for retirement within the FYDP.

2.5.3.3. Maintain all data management processes for aerospace vehicle migration planning.

2.5.3.4. Provide migration plan training, the migration guide, and the template for collecting and managing migration planning data.

2.5.3.5. Provide AFMC/A4F with information for the AFMC portion of the Migration Plan.

2.5.3.6. Analyze the disposition of aerospace vehicles no longer required for operational or support needs. Coordinate dispositions with stakeholders for current and projected requirements.

2.5.3.7. Obtain approval of the Migration Plans annually.

2.5.3.8. Upon approval, distribute the Migration Plans to stakeholders.

2.5.4. Organize and chair the Air Force Strike Board.

2.5.4.1. Coordinate the agenda with stakeholders.

2.5.4.2. Obtain Migration Plan inputs from AFMC and AFMC Program Offices.

2.5.4.3. Collect, and track the completion of action items.

2.5.5. Compare aerospace vehicle retirements with FY programming. Deviations must be approved by AF/A8P and coordinated through the appropriate MAJCOM/ARC Programmer.

2.5.6. Maintain a file of aerospace vehicle disposition requests, approved DAF Form 913s, and coordination for each disposition. Stakeholders should have access to approved DAF 913s.

2.5.7. Distribute aerospace vehicle termination messages to stakeholders responsible for planning, resourcing, testing, training, and sustainment.

2.5.8. Coordinate with AF/A8 on all aerospace vehicle repair or retire decisions and distribute aerospace vehicle repair or retirement determinations to stakeholders responsible for planning, resourcing, testing, training, and sustainment.

2.5.9. Track requests for parts removal from stored aerospace vehicles and coordinate requests with AF/A8P, SAF/AQ, and affected program offices.

2.5.10. Report the aerospace vehicle inventory monthly. Distribute reports to AF/A8PE and Panel Force Programmers.

2.6. Air Force Aerospace Vehicle Distribution Office (AVDO). Will:

2.6.1. Use the DAF Form 913 to allocate aerospace vehicles as directed by AF/A4LM. DAF Forms 913 will comply with disposition and retention instructions in accordance with the Air Force Records Disposition Schedule, which is located in the Air Force Records Information Management System.

2.6.2. Coordinate with MAJCOM and ARC AVDOs and update Reliability and Maintainability Information System (REMIS) after receiving DAF Forms 913 documentation, IAW **Attachment 3**, to add, transfer, or terminate aerospace vehicles.

2.6.3. Issue implementing instructions based on Headquarters Air Force (HAF) assignment directives and confirm action is taken on all assignments.

2.6.4. Maintain a centralized record of the assignment and possession of all Air Force aerospace vehicles within the REMIS.

2.6.5. Monitor AVDO aerospace vehicle inventory changes and update inventory records accordingly.

2.6.6. Report aerospace vehicle assignment terminations to AF/A4LM.

2.6.7. Maintain electronic copies of signed DD Forms 250, *Material Inspection and Receiving Report*, for all aerospace vehicles in REMIS IAW the Air Force Records Disposition Schedule, located in the Air Force Records Information Management System.

2.7. Major Commands (MAJCOMS) and Air Reserve Component (ARC) Programmers. Will:

2.7.1. Coordinate with designated AF panels, Stakeholders and using Commands when changing the distribution of aerospace vehicles.

2.7.2. Coordinate the annual aerospace vehicle divestment schedule with the affected program office and 309 AMARG to align with the depot planning timelines no later than 31 March each year. If the National Defense Authorization Act (NDAA) is enacted after this date, coordinate any required updates within 30 days of enactment.

2.7.3. Provide 309 AMARG with information on upcoming aerospace vehicle arrivals a minimum of 30 business days before each fiscal quarter.

2.8. MAJCOM and ARC AVDOs. Will:

2.8.1. Carry out the aerospace vehicle assignments directed by AF and implemented by AF/AVDO.

2.8.2. Responsibility for assigned aerospace vehicles remains with the accountable organization until final disposition is determined by AF/A4LM and the vehicle is officially transferred or disposed. To ensure this accountability, conduct an annual physical inventory of aerospace vehicles to verify record accuracy and validate asset locations.

2.8.3. Submit aerospace vehicle disposition/transfer requests.

2.8.3.1. The gaining AVDO will coordinate all active aerospace vehicle inventory transfers.

2.8.3.2. Notify the AF AVDO of the expected timeline for the transfer. Follow up with the unit to ensure the transfer occurs.

2.8.3.3. Notify the appropriate PM prior to submitting a disposition request.

2.8.3.4. The AFMC AVDO is responsible for 309 AMARG assigned aerospace vehicles.

2.8.3.4.1. Coordinate non-routine aerospace vehicle arrivals at 309 AMARG with the 309 AMARG/AVDO.

2.8.3.4.2. The delivering organization will coordinate the delivery date as early as possible or a minimum of 30 business days before arrival.

2.8.3.5. Assist with documentation for mishap and excess aerospace vehicles designated for the DoW screening process IAW DoDM 4160.21-V4, *Defense Materiel Disposition: Instructions for Hazardous Property and Other Special Processing Materiel*, or as directed by AF/A4LM.

2.9. Unit AVDOs. Will:

2.9.1. Submit reports on aerospace vehicle transfers, in accordance with DAFI 21-103 and this instruction.

2.9.2. Complete the GSA Standard Form (SF) 120, *Report of Excess Personal Property*, as prescribed by Title 41 Code of Federal Regulations (CFR) Part §102-36.215. *How do we report excess personal property?*

2.9.3. Schedule aircraft transfers for excess aircraft with the 309 AMARG, MAJCOMs/ARC AVDOs, and PMs.

2.9.4. Maintenance group commanders (or equivalent) will certify the condition, completeness, and serviceability of each transferred aerospace vehicle IAW TO 00-20-1, *Aerospace Equipment Maintenance Inspection, Documentation, Policies and Procedures* and DAFI 21-103.

2.9.5. The losing unit will place a current CG Form 290 "Aerospace Vehicle Deliver Receipt" and AF IMT Form 2692 "Aircraft/Missile Equipment Transfer/Shipping Listing" in the aircraft 781 Forms binder prior to the aircraft being transferred to 309 AMARG.

2.9.6. Oversee the delivery process to ensure proper documentation, classified equipment status, and transfer of custody for delivered aerospace vehicles.

2.10. AFMC/A4, Product Support Management Division (AFMC/A4F). Will:

2.10.1. Receive and distribute the 309 AMARG annual Air Force activity report This report will include induction, disposal, and parts reclamation data and will be provided to AF/A4LM and Secretary of the Air Force Logistics and Product Support (SAF/AQD).

2.10.2. Provide the 309 AMARG annual report for induction costs to AF/A4L and AF/A4P for budget planning.

2.10.3. Distribute the Air Force Strike Board call letter to PMs for Migration Plan slides. Manage and publish the Migration Plan slides for the Air Force Strike Board.

2.10.4. Annual Migration Plan Submission.

2.10.4.1. Migration Plans will cover the current year through the FYDP.

2.10.4.2. Distribute the annual Migration Plan call letter to System Program Offices (SPO).

2.10.4.3. The call letter will include a Migration Plan Guide outlining the standardized format.

2.10.4.4. Consolidate completed Migration Plans and submit to AF/A4LM within 6 weeks of the call letter distribution.

2.11. Systems Program Office (SPOs). Will:

2.11.1. Develop a Migration Plan for aerospace vehicles programmed for retirement from the active aerospace vehicle inventory. Include transfers to inactive status, in storage and those identified for reclamation or disposal.

2.11.1.1. Use the Migration Plan Guide provided in the Migration Plan call letter to develop the Migration Plan.

2.11.1.2. Coordinate Migration Plans with lead and utilizing MAJCOM Force Programmers and AVDOs.

2.11.1.3. Submit approved Migration Plans to AFMC/A4 for forwarding to AF/A4LM.

2.11.2. Storage Management.

2.11.2.1. Review programmed aerospace vehicle retirements and determine how many and what storage category for induction.

2.11.2.2. Review aerospace vehicles currently in storage to determine the optimum number required for each storage category to meet requirements. Reclaim at the earliest opportunity to minimize new spare part expenditures.

2.11.2.3. To change storage codes for aerospace vehicles already in storage, coordinate with the AFMC AVDO, who will submit the request to AF/A4LM.

2.11.2.4. Identify by tail number or Unique Item Identifier aerospace vehicles changing storage categories and/or going to disposal. These actions will be reviewed by the Air Force Strike Board, with the results to be included in the annual Migration Plan.

2.11.2.5. For new inductees, funding will be in place 14 business days prior to delivery of aerospace vehicles to the 309 AMARG.

2.11.2.6. Identify the storage code for aerospace vehicles being transferred to 309 AMARG.

2.11.3. Track parts removed from aerospace vehicles in storage IAW DAFI 21-103.

2.11.3.1. Direct 309 AMARG personnel to a specified serial number(s) and attempt to consolidate parts removals from as few aerospace vehicles as possible.

2.11.3.2. Initiate a formal request to AF/A4LM when parts are needed from Type 1000 storage (code XS) to satisfy operational mission needs. The part must be Mission Impaired Capability Awaiting Parts (MICAP), or depot maintenance is at a work stoppage prior to making the request. The request should address the issue of driving the part(s) removal and identify when the parts will be replaced. Once the part is received it will only be stored at 309 AMARG and it is not required to be reinstalled on the aerospace vehicle.

2.11.3.3. For chronic spares shortages, request removing the aerospace vehicles from Type 1000 storage, and placing them into programmed reclamation.

2.11.4. Determine disposition and request 309 AMARG storage of aerospace vehicle residue and associated support equipment in the event of vehicle destruction or determination the vehicle is not economically feasible to repair.

2.11.4.1. Send disposition or storage requests through the MAJCOM/ARC AVDO to AF/A4LM.

2.11.4.2. For disposition of damaged aerospace vehicles exceeding the cost threshold IAW DAFI 91-204, *Safety Investigation and Reports.* Submit a disposition recommendation through the Program Executive Office (PEO) and obtain owning MAJCOM/ARC, A3 and A5 coordination. Once coordinated, forward to AFMC/A4 for submission to AF/A4LM.

2.11.5. With assistance from 309 AMARG/MXDS, evaluate the overall condition of the aircraft upon completion of programmed reclamation.

2.11.5.1. Determine if the reclaimed aerospace vehicle should be retained and assigned to Reclamation Insurance Type (RIT) status to support future parts requirements or authorized for disposal.

2.11.5.2. Direct the 309 AMARG/MXDS to either assign these aircraft to an RIT project or request DAF Form 913 to begin disposal action.

2.11.5.3. During the annual Migration Plan review, use the vehicle condition report to determine the optimum number of aerospace vehicles in Type 2000 and Type 4000 storages.

2.11.5.4. Once the aerospace vehicle has been reclaimed, dispose of it on a disposal project or retain it in RIT for potential future parts removal.

2.11.6. Migration Plans. PMs must incorporate migration planning into their lifecycle planning for all Air Force assets.

2.11.6.1. Document when the initial Migration Plan is due based on scheduled weapon system retirements within the FYDP.

2.11.6.2. Develop a comprehensive Migration Plan for the current/programmed force structure and a divestiture strategy throughout the FYDP.

2.11.6.2.1. The plan must address MDS changes, conversions to trainers, 309 AMARG inductions, FMS, SAP, and transfers to other services, DoW agencies, or the National Museum of the United States Air Force (NMUSAF).

2.11.6.2.2. The plan must include a summary of all 309 AMARG stored aerospace vehicles.

2.11.6.2.3. The plan will be used to determine current and future inactive aircraft requirements to support the active inventory, FMS, and drone programs as aerospace vehicles retire.

2.12. 309TH Aerospace Maintenance and Regeneration Group (AMARG). Will:

2.12.1. Maintain custodial responsibility for Air Force assets stored at the facility.

2.12.1.1. Process aerospace vehicles into storage, maintenance, flight preparation, overland shipment, reclamation, and disposal as directed by AF, AFMC, the PM, or other authorized activities

2.12.1.2. Remove parts from specific aerospace vehicles as directed by the PM

2.12.1.3. Provide expertise and data to customers as requested to support management of stored aerospace vehicles and engines.

2.12.1.4. Provide a working escort and access to the PM for viewing, photographing, and inspecting aerospace vehicles, tooling and other major end items.

2.12.1.4.1. Escorts must accompany all customers entering controlled or aircraft maintenance industrial work areas. At least one escort is required for every six individuals.

2.12.1.4.2. An escort fee will be charged to customers when direct labor employees must be utilized.

2.12.2. Screen aerospace vehicles with GSA for disposal-approved vehicles located at 309 AMARG, as directed by AF/A4LM after completion of the save list.

2.12.3. Submit an annual report to AFMC/A4F and AF/A4LM by 1 February of each year. The report will include inductions, reclamations, disposals and provide the MDS, serial/identification number, current project number, previous project number, storage category, status code, and date received.

2.12.4. Provide a parts removal report to the PM upon request. The report must include: MDS, tail number or Unique Item Identifier, part nomenclature, part number, national stock number, and date removed.

2.12.5. Receive aerospace vehicle assignment directives from Air Force AVDO based on DAF Forms 913 issued by AF/A4LM. Receive, preserve, and maintain aerospace vehicles and engines as directed and specified in Air Force Technical Order (TO) 1-1-686, *Desert Storage Preservation and Process Manual for Aircraft, Aircraft Engines, and Aircraft Auxiliary Power Unit Engines* or as directed by the Weapon System Program Office with approved engineering documentation.

2.12.6. Process NMUSAF requests for aerospace vehicles.

2.12.7. Maintain records of all AF/A4L approvals to remove parts from 1000 XS stored aerospace vehicles and PM-coordinated requests to remove parts from any Type 1000 XT stored aerospace vehicles. Maintain all parts removed from Type 1000 XS stored aerospace vehicles. Turn munitions and shelf-life items into supply and identify and tag other parts for the specific MDS and serial number.

2.13. National Museum of the United States Air Force (NMUSAF). Will:

2.13.1. Exercise DAF authority to identify, acquire, preserve, care for, and manage DAF historically significant aerospace vehicles.

2.13.2. Coordinate with AF/A4LM, SPOs, AVDOs, and 309 AMARG for management of historically significant aerospace vehicles, IAW DAFI 84-103, *Department of the Air Force Heritage Program*, DAF, DoW, Armed Services, and Federal Civilian Agencies' requirements will take precedence over non-Federal entity requirements.

2.13.3. Loan or donate historical aerospace vehicles to approved recipients on an "as is, where is" basis.

2.13.3.1. Conduct disposition of excess aerospace vehicles through museum exchange.

2.13.3.2. Coordinate with the appropriate PM, possessing unit, and/or 309 AMARG for qualified personnel and resources to accomplish and verify appropriate deactivation and demilitarization, IAW DoDM 4160.28-V1, *Defense Demilitarization: Program Administration,* and DoDM 4160.28-V2, *Defense Demilitarization: Demilitarization Procedures.*

2.13.4. Evaluate, certify, and inspect recipients to ensure proper care and placement of loaned items.

2.13.4.1. Recipients must have a comprehensive plan for aerospace vehicle preservation and display, including non-recurring expenses and recurring expenses of sustainment and maintenance.

2.13.4.2. Recipients are liable for the aerospace vehicle and must maintain sufficient liability and casualty insurance.

2.13.5. Manage aerospace vehicle loans or donations.

2.13.5.1. Organizations must submit a written request, including justification, plan, and contact information.

2.13.5.2. The borrowing organization is responsible for all associated arrangements and expenses.

2.13.6. Dispose of aerospace vehicles no longer needed through authorized means, including turn-in, disposal, or museum exchange, IAW DoDM 4160.28-V1 and DoDM 4160.28-V2.

2.14. Stakeholders and Using Commands. Will:

2.14.1. Advocate with Lead Command/Lead Agent for distribution of aerospace vehicles to meet mission needs.

2.14.2. Initiate PCRs IAW AF/A8PE PCR guidance when requesting aerospace vehicle distribution changes.

Chapter 3

FORCE STRUCTURE PROGRAMMING FOR AEROSPACE VEHICLES

3.1. Force Structure Programming.

3.1.1. NDAA constraints apply to the determination of Primary Aerospace Vehicle Authorized (PAA), Backup Aerospace Vehicle Authorized (BAA), and Attrition Reserve (AR) authorizations.

3.1.1.1. Force Programmers, comprising Panel, MAJCOMS, and ARC must comply with NDAA constraints and establish these authorizations to support unit operations and enable mission fulfillment. Air Force utilizes the DAF Council and AFCS Process to approve programmed authorizations.

3.1.1.2. Force Programmers will prioritize combat readiness when determining PAA for MAJCOMs, and ARC.

3.1.2. Aircraft Authorizations.

3.1.2.1. Primary Asset Inventory (PAI) is the numbers of aircraft (not tail number specific) assigned to meet the primary aircraft authorizations.

3.1.2.2. PAA is the authorized number of aircraft for a unit's operational mission. Program PAA to meet MAJCOM and ARC validated mission requirements.

3.1.2.3. BAA is determined by considering the primary programming needs of aerospace vehicles and potential risks. BAA is crucial for ensuring units have the necessary resources to maintain operational readiness.

3.1.2.4. Backup Asset Inventory (BAI) consists of aircraft that back up primary aircraft and ensure continuity of operations.

3.1.2.5. AR is calculated by multiplying the number of PAA by the forecast or historical peacetime attrition rate and then multiplying that number by the expected service life of the weapon system.

3.1.2.5.1. Panel force programmers will flow new production aerospace vehicles assigned to fill unit PAA and BAA requirements.

3.1.2.5.2. As production nears completion, excess aerospace vehicles will be distributed as AR.

3.1.2.5.3. Numbers of aerospace vehicles assigned to meet AR authorizations are simply described as AR inventory.

3.1.2.5.4. Panels, MAJCOM, and ARC force programmers must monitor actual attrition to update the projected force structure.

3.1.2.5.5. If the active inventory of aerospace vehicles exceeds the PAA and BAA, the excess becomes AR.

3.1.2.5.6. If AR exceeds 10% of the total of PAA plus BAA, the AF Force Programmer, in coordination with the PM and lead MAJCOM Planners, may consider storing the excess in 309 AMARG, until needed.

3.1.2.5.7. As a system nears the end of its life cycle, AR is expected to go to zero, and programmatic actions will balance remaining aerospace vehicles to unit requirements.

3.1.3. Programmers will use Purpose Identifier Codes (PICs) to designate assignment and possession, determine responsibility for funding, financial accountability, and track inventory items as active or inactive. PICs are listed in **Attachment 3**.

3.1.4. Programmers most commonly use active inventory PICs associated with the following:

3.1.4.1. Primary Mission Asset Inventory (PMAI) are aircraft programmed and assigned against unit PAA, for the performance of operational (peacetime and wartime) missions.

3.1.4.2. Primary Training Asset Inventory (PTAI) is determined and programmed by training requirements, student throughput, and curriculum needs. PTAI consists of aircraft specifically designated for training purposes, used to teach pilots and aircrew the skills and knowledge necessary to operate and maintain aircraft and include those used for Undergraduate Flight Training, Follow-on Training, Formal Training Units, and Advanced Training Units.

3.1.4.2.1. Determine PTAI based on the annual number of students, the number of syllabus sorties per student, and the aircraft utilization rate.

3.1.4.2.2. Panel Force Programmers will validate MAJCOM training aircraft requirements and program sufficient training aircraft to support flying training needs.

3.1.4.3. Primary Development/Test Asset Inventory (PDAI) is determined and programmed by test requirements, technology maturity, and system development needs. PDAI consists of aircraft specifically designated for developmental and operational testing, used to evaluate new technologies, systems, and capabilities before and during integration into operational fleets.

3.1.4.3.1. Determine PDAI based the number of each type of aerospace vehicle needed to accomplish ground, flight, and structural testing. Coordinate through Panel Force Programmers, utilizing The Air Force Test Center, The Air Force Operational Test and Evaluation Center, MAJCOMs, and ARC, and SPOs for new or changed requirements.

3.1.4.3.2. Panel Programmers will provide aerospace vehicles to meet Developmental Test and Evaluation (DT&E) requirements, including law of war legal reviews. DT&E is testing required for new weapon systems, for testing follow-on modifications to weapon systems, and for assessing hardware and/or software specifications. Some DT&E aerospace vehicles may require unique modifications, preventing them from returning to the operational fleet.

3.1.4.3.3. Operational Test and Evaluation (OT&E) entail operational testing of software and hardware designs to determine acceptability in an operationally defined environment.

3.1.4.3.4. Program an appropriate number of OT&E aerospace vehicles for operational testing. The Air Force Operational Test and Evaluation Center, MAJCOMs, and ARC, in coordination with the SPO will determine the number of aerospace vehicles required to support OT&E.

3.1.4.4. Primary Other Aerospace Vehicle Inventory (POAI) is determined and programmed by operational support requirements and unique mission needs. POAI consists of aircraft used for special missions and not elsewhere classified.

3.2. Force Structure Programming and Implementation Guidelines.

3.2.1. Use the POM Preparation Instruction (PPI) on all POM submissions to obtain the latest directive and technical guidance and facilitate efficient presentation to the AFCS.

3.2.2. FSDM will be used to generate FSW. The FSDM system is the Air Force's authoritative database for tracking programmed aerospace vehicle inventory and flying hours across all units and commands for the first and second FYDP.

3.2.2.1. Programmers will capture unit level data to reflect the allocation, assignment, mission, and PEC of all aerospace vehicles in the active inventory for the first and second FYDP.

3.2.2.2. Programmers will balance and aggregate Unit-level detail with the POM and President's Budget (PB) before submission to Office of the Secretary of War (OSW). **(T-0)**

3.2.3. Program Integration Division AF/A8PE will use the FSDM database to publish the classified FSW when the POM/Budget Estimate Submission (BES) is submitted to OSW, and after the PB is submitted to Congress. The FSW is accessible via the AFCS Suite on the Secret Internet Protocol Router Network (SIPRNET) with permission from AF/A8PE.

Chapter 4

ACTIVE INVENTORY ASSIGNMENTS AND TRANSFERS

4.1. Assignment and Transfer Processes for Active Aerospace Vehicle Inventory.

4.1.1. MAJCOMs and ARC Force Programmers will initiate PCRs and are responsible for contacting AF/A4LM for exceptions.

4.1.1.1. Updates or transfers requiring changes to the quantity, assignment purpose identifier code and/or program element code, must be processed on a DAF Form 913.

4.1.1.2. The gaining MAJCOM AVDO will determine when a new or amended DAF Form 913 is required.

4.1.1.3. AF/A4LM will complete final coordination with MDS-specific Force Programmers and the DAF Form 913 will be approved by AF/A4LM.

4.1.1.4. The gaining MAJCOM or ARC AVDO will submit new production aircraft inventory requests.

4.1.1.4.1. Aircraft entering the Air Force inventory must be assigned an approved MDS IAW DAFI 16-401, *Designating and Naming Defense Military Vehicles* prior to entry. Space Force inventory must be assigned an approved MDS IAW Space Force Instruction (SPFI) 16-403, *Space Force Weapon System Naming and Designators.*

4.1.1.4.2. Program Offices, with MDS designation, must request an aircraft serial number and provide necessary information to the Standard Reporting Designator (SRD) OPR for operational responsibility. **(T-1)**

4.1.1.4.3. Use of the Air Force Aircraft Serial Number Management System (ASNMS) is mandatory. The AFMC Air Force Life Cycle Management Center (AFLCMC), Product Data Services Branch of the Logistics Services Directorate of AFLCMC (AFLCMC/LZP), is responsible for the ASNMS.

4.1.1.4.4. AFMC will assume assignment of aerospace vehicles undergoing a MDS change at an AFMC organic or contracted depot facility. After MDS conversion, the aerospace vehicle will be reassigned to the intended mission MAJCOM, and PIC updates will be made by the gaining AVDO. **(T-1)**

4.1.1.5. All Air Force aerospace vehicles, including those on loan or lease to external agencies, are considered Air Force accountable property and must be reported in an approved Accountable Property System of Record (APSR), as listed in DoDI 5000.64_DAFI 23-111, *Accountability and Management of DOD Equipment and other Accountable Property*.

4.1.1.6. All Air Force-owned aircraft, accepted through a DD Form 250 or DD Form 1149, *Requisition and Invoice/Shipping Document*, will be managed in the REMIS system.

4.1.1.7. Excess aircraft will be processed in accordance with DoDM 4160.21-V4. **(T-0)**

4.1.1.8. Aircraft not owned by the Air Force will be reported by the owning organization to avoid dual reporting

4.2. Serial Number Request Process.

4.2.1. Send an email to SCYNET workflow: **AFLCMC.LZP.SCYNET@us.af.mil** with the following:

4.2.1.1. Office Symbol of requesting Program.

4.2.1.2. POC for the request.

4.2.1.3. Name of contractor/OEM.

4.2.1.4. Contract Number.

4.2.1.5. Fiscal Year of the funds used.

4.2.1.6. Using Service.

4.2.1.7. If FMS, the FMS case number.

4.2.1.8. MDS of the vehicle.

4.2.1.9. List of requested tail numbers and action for each number: ADD, DELETE, OR RENAME (include old number and new number).

4.2.2. Within 5 business: AFLCMC/LZPTX reviews the request to ensure uniqueness, coordinates with POC if additional information is needed.

4.2.3. If approved, AFLCMC/LZPTX sends a signed memorandum to the requestor, documenting approval to use the tail number(s) for purposes of marking and identification.

4.2.4. Existence of a serial number itself is a reservation and does not imply or obligate the existence of a physical asset.

4.3. DAF Form 913 Approval Process.

4.3.1. The DAF Form 913 process assigns aircraft tail numbers to the MAJCOM, allowing for more flexible transfer of tail numbers within the MAJCOM

4.3.1.1. MAJCOM and ARC AVDOs will initiate requests for active inventory project actions using information from **Attachment 2**, to complete the DAF Form 913.

4.3.1.2. Requests must be coordinated with the losing and gaining MAJCOM/ARC, affected Lead MAJCOM/Lead Agent, MDS-specific Program Offices, AF/A4LM, Air Force AVDO, and affected Force Programmers.

4.3.1.3. The gaining MAJCOM/ARC AVDO will submit project action requests to AF/A4LM using the DAF Form 913.

4.3.1.3.1. The DAF Form 913 will include current Fiscal Year (FY) Total Active Inventory (TAI) authorizations in the remarks.

4.3.1.3.2. Air Force and MAJCOM AVDOs will assign tail numbers to projects within the authorized TAI limits for each fiscal year.

4.3.1.3.3. The MAJCOM AVDOs will ensure DAF Form 913 for aircraft in production is updated at least annually to reflect the previous year's deliveries and any changes to TAI authorizations. **(T-0)**

4.3.1.4. AF/A4LM will complete final coordination and approve the DAF Form 913.

4.3.1.5. AF/A4LM will distribute approved DAF Form 913s as outlined in **Attachment 8**. For test and evaluation assets, include DAF/TER and the Air Force Test Center Plans and Programs Directorate (AFTC/XP) Workflows.

4.3.1.6. Air Force AVDO will update allocation changes in the REMIS database, per the approved DAF Form 913.

4.3.1.7. Air Force AVDO and AFMC AVDO are responsible for creating depot organizations in REMIS. MAJCOM AVDOs will create new non-depot organizations or assign aerospace vehicles to existing organizations in REMIS and will list lower-level organizations as the assigned organization, as required, within current system limitations.

4.3.1.8. AF/A4LM will obtain approval from the Panel Force Programmer Chair in exceptional circumstances when a DAF Form 913 is submitted prior to PCR approval. The affected MAJCOM AVDO will monitor the final repair or retirement decision for FSDM accuracy. When the mishap aircraft is retired and the temporarily assigned aircraft is retained, the affected MAJCOM A8 will initiate a PCR to update the Air Force Program. **(T-1)**

4.3.1.9. Coordinate disposition changes with Deputy Chief of Staff Strategic Deterrence and Nuclear Integration, Countering Weapons of Mass Destruction Division (AF/A10S) for aircraft and missiles subject to the New Strategic Arms Reduction Treaty.

4.3.1.10. Air Force Global Strike Command (AFGSC), Space System Command, Advanced Systems and Development Directorate, and AFMC Air Force Nuclear Weapons Center (AFNWC) must manage excess nuclear assets, ensure compliance with treaty obligations, and properly handle sensitive materials. **(T-0)**

4.3.2. Changes of Possession.

4.3.2.1. Must comply with DAFI 21-103, with gaining and losing command reporting in accordance with established guidelines at the time of the actual change.

4.3.2.2. AFMC will assume possession for Aerospace vehicles requiring Programmed Depot Maintenance (PDM) IAW DAFI 21-103. DAF Form 913 will be used to verify if assignment responsibility remains with the MAJCOM, ARC, or other designated authority. **(T-1)**

4.3.2.3. Changes in aircraft possession between MAJCOMs or ARC will be documented by the AVDO in a DAFI 21-103 gain and loss message. When modifications alter an aircraft's Mission Design Series, assignment will change to AFMC.

4.3.2.4. PCRs are IAW AF/A8PE guidance. ARC requests will follow DoDI 1225.06, *Equipping the Reserve Forces*.

4.3.2.5. PCRs do not require coordination with the Office of the Secretary of War for Reserve Affairs but are required when an aircraft is reprogrammed from the ARC to RegAF outside of the normal cycle.

4.3.3. Aerospace Vehicle Loans.

4.3.3.1. The change of possession for the loan of an aerospace vehicle between MAJCOMS will be documented in an AFI 21-103 message. For possession-only loans, an FS Form 7600A or Memorandum of Agreement (MOA) will outline the necessary parameters and adhere to established guidelines in the United States Government General Term & Conditions (GT&C) Instructions for FS Form 7600A, DoDI 4000.19, *Support Agreements* and AFI 25-201, *Intra-Service, Intra-Agency, and Inter-Agency Support Agreements Procedures.*

4.3.3.1.1. Depot maintenance or modifications will use contractual documentation in lieu of a MOA.

4.3.3.1.2. Shared Use aircraft, will be IAW DoDI 4000.19 and deviations documented in associated agreements.

4.3.3.2. AF/A4LM will distribute loan documentation to the appropriate the Air Staff directorate points of contact. **(T-0)**

4.3.3.3. Transfers from ARC to RegAF must comply with 10 U.S.C § 9062, *Policy; composition; aircraft authorization* current edition, and DoDI 1225.06. **(T-0)**

4.3.3.3.1. A FS Form 7600A, *General Terms and Conditions*, will be signed by the applicable MAJCOM commanders (or designate representative) and routed to Chief of Staff of the Air Force (CSAF) for transfers from the ARC to RegAF.

4.3.3.3.2. Once approved, the FS Form 7600A will be submitted to the Secretary of the Air Force for Manpower and Reserve Affairs (SAF/MR) and the Office of the Assistant Secretary of War for Manpower and Reserve Affairs (ASW (MR&A), for coordination and reporting to Congress.

4.3.3.3.3. Secretary of War (SECWAR) approval must be obtained prior to transfer of equipment.

4.3.3.4. SECWAR approved ARC to RegAF processing exceptions not requiring FS Form 7600A or MOA to be provided to Congress.

4.3.3.4.1. The permanent assignment of an aircraft from the ARC.

4.3.3.4.2. A change in possession of an aircraft that does not exceed 90 calendar days.

4.3.3.4.3. A routine temporary transfer of possession of an aircraft from the ARC for the purpose of maintenance, upgrade, conversion, modification.

4.3.3.4.4. Testing and evaluation made solely for the benefit of the ARC.

4.3.3.4.5. A routine permanent transfer of assignment of an aircraft that terminates in the ARC's interest. Notice of the transfer must have been provided to the congressional defense committees and the transfer approved by the Secretary of War.

4.3.3.4.6. A reciprocal permanent assignment of an aircraft from the RegAF to the ARC that does not degrade the capability of, or reduce the total number of, aircraft assigned to the ARC.

4.3.3.5. Air Staff MOA coordination process to transfer from ARC to RegAF.

4.3.3.5.1. The requesting MAJCOM and ARC drafts a MOA and sends it to the Air Force headquarters (AF/A8P) for coordination and signatures.

4.3.3.5.2. AF/A8P obtains signature of the Commander of the Air Force Reserve Command and/or the Director of the Air National Guard, and then the CSAF.

4.3.3.5.3. After the CSAF signs the MOA, AF/A8P coordinates with the Office of the Secretary of War and Congress is notified.

4.3.3.5.4. Upon congressional notification and the participating MAJCOMs and ARC are notified the Air Force is authorized to proceed with the aircraft transfer.

4.4. Repair or Retire Decision.

4.4.1. The Air Force will evaluate aircraft with structural or material damage, to determine whether to repair or retire them. Mishap cost thresholds are defined in DAFI 91-204.

4.4.2. The PM makes the repair or retire recommendation.

4.4.2.1. The PM, through the PEO, will complete a repair or retire recommendation worksheet (**Attachment 5**)**.** Coordinate the recommendation with the lead and assigned MAJCOM, AF/A3 and AF/A4. If there is disagreement, the Lead MAJCOM Commander will make the final decision.

4.4.2.2. The PM will submit the coordinated repair or retire recommendation to AFMC/A4 before forwarding it to AF/A4LM.

4.4.2.3. With a total loss due to mishap, the PM will coordinate with the Maintenance Group Commander to terminate aerospace vehicles from inventory. The PM will then determine the save list and demilitarization criteria for the terminated aircraft.

4.4.3. AF/A4LM will initiate a repair or retire recommendation staff package and send to AF/A8PE. AF/A8PE will coordinate the package with Deputy Chief of Staff, Training and Force Management (AF/A34) and SAF/AQ.

4.4.3.1. AF/A8 approves repair recommendations and delegates retirement recommendation approval to AF/A8P.

4.4.3.2. AF/A8 will digitally sign the approval for aircraft repair and send to the Program Office and send a copy to the owning and Lead Command/Lead Agent offices.

4.4.4. Aerospace vehicles must be returned to service at least 24 months before the scheduled retirement date and repairs will comply with 10 USC § 2244a, *Equipment Scheduled for Retirement or Disposal: Limitation on Expenditures for Modifications,* and DAFI 63-101/20-101, *Integrated Life Cycle Management.*

4.4.5. Aerospace vehicle disposal will follow 41 CFR Part §102-36, *Disposition of Excess Personal Property,* 41 CFR Part §102-36.215, *How do we report excess personal property?* and 41 CFR Part §102-36.340, *What must we do when disposing of excess aircraft?*

4.4.6. Air Force will obtain GSA release authorization prior to turning in any aerospace vehicle remains to DLA Disposition Services.

4.4.6.1. AF/A4LM will complete, sign, and submit an SF-120 Report of Excess Personal Property to obtain the required GSA Release letter.

4.4.6.2. Units will provide the following required information, custodian POC information, high level mishap details, and confirmation of legal hold release.

Chapter 5

INACTIVE INVENTORY ASSIGNMENTS AND TRANSFERS

5.1. Inactive Aerospace Vehicle Inventory Allocations.

5.1.1. AF/A4L will use the Divestment and Procurement report for the programmed divestments and procurements which reflects the projected aerospace vehicle divestments in the specified fiscal year. Program Offices will then work with lead, using, and component commands to determine which aircraft tail numbers will be included in a migration plan.

5.1.2. The DoW will screen aircraft tail numbers to determine storage or disposal.

5.1.3. The Air Force will prioritize aerospace vehicles for potential future use if stored.

5.2. DoW Screening Process.

5.2.1. AF/A4LM will evaluate aircraft deemed excess to active inventory needs and its future disposition. The MAJCOM/ARC AVDO and PM will assist AF/A4LM to identify Air Force requirements. **(T-0)**

5.2.2. AF/A4LM will consider flyable life cycle, test requirements, future operational needs, potential for reclamation, use as aerial targets, ground training needs, foreign military sales, ground target requests, and NMUSAF requirements in disposition planning.

5.2.3. AF/A4LM will assign inactive excess aerospace vehicles to the highest priority using the DAF Form 913 process in accordance with DoDM 4160.21, Vol 4. **(T-0)**

5.2.3.1. The Assistant Secretary of War for Sustainment (ASW(S)) provides oversight for unique or external transfers to ensure compliance with Defense Materiel Disposition policy.

5.2.3.2. SAF/IAPX will conduct FMS screening to determine if aircraft can be transferred for security assistance needs.

5.2.4. AF/A4LM will load the SF-120 to the GSA for transfer to federal civil agencies or donation to authorized recipients through GSA.

5.2.4.1. Category "A" aircraft, transfers will be to authorized organizations for commercial use through GSA, with the SF-120 and other required information loaded to the public GSA Auction website.

5.2.4.2. Category "A" aircraft designed for oil spill response will be transferred to the DLA Disposition Services prior to being offered for public sale.

5.3. Assignment and Transfer Processes for Inactive Inventory.

5.3.1. MAJCOM AVDOs initiate all project action requests for inactive inventory via a DAF Form 913 request. AF/A4LM will conduct an internal Air Force screening for flyable active inventory requirements.

5.3.1.1. MAJCOM/ARC AVDOs submit project action requests to the aircraft disposition repository. The request must specify whether the action is an intra-Air Force transfer or an excess declaration.

5.3.1.2. Intra-Air Force aerospace vehicle transfers. AF/A4LM will coordinate requests with the Program Office and obtain approval from AF/A4L Division. Once approved, A4LM will provide copies to Force Programmers.

5.3.1.3. Aerospace vehicles declared excess to the Air Force. AF/A4LM will review to determine disposition. Once complete, AF/A4LM will approve the DAF Form 913, and termination activities will commence.

5.3.1.4. Active Components seeking possession of inactive ARC aerospace vehicles must consult with AF/A4LM to ensure compliance, particularly for Type 1000 storage and GITA assets.

5.3.2. AFGSC, SSC, Advanced Systems and Development Directorate, and AFNWC manage excess assets. **(T-1)**

5.3.2.1. AF/A10S will coordinate on disposition changes for, all aircraft and missiles, which are stored at 309 AMARG and, subject to the New Strategic Arms Reduction Treaty (New START) or other arms control treaties.

5.3.2.2. Missile transfers and terminations will follow New START requirements.

Chapter 6

TERMINATION OF AEROSPACE VEHICLES FROM AIR FORCE INVENTORY

6.1. Reasons for Termination.

6.1.1. Aerospace vehicles may become excess to the Air Force for various reasons, including the elimination of a mission requirement, a total loss declaration, a repair-or-retire decision favoring retirement, or the arrival of a replacement aircraft type.

6.1.1.1. MAJCOM/ARC, in coordination with the Lead Command/Lead Agent, must request a save list from the appropriate Program Office.

6.1.1.2. The Lead Command/Lead Agent, will coordinate with the assigned command to assess whether the possessing maintenance organization can meet save-list requirements without unduly impacting mission capability.

6.1.1.3. SAF/IAPX will collaborate with the Program Office to produce a Letter of Acceptance and finalize contractual agreements when large systems, such as aircraft wings, are intended for FMS.

6.2. Demilitarization, Removal of Hazardous Materials (HAZMAT) Declassification.

6.2.1. Owning organizations are responsible for demilitarizing aircraft IAW DoDM 4160.28-V1, and DoDM 4160.28-V2. If an organization requires external support for demilitarization, it must coordinate through the assigned command or Lead Command/Lead Agent.

6.2.2. The owning organization custodian must remove all hazardous materials (HAZMAT), IAW demilitarization procedural guidance provided by the Program Office, and obtain AF/A4LM approval before turning over an aircraft to DLA Disposition Services for disposal.

6.2.2.1. The owning organization custodian must contact the Regional DLA Disposition Services Office and complete the DLA Disposition Services Aircraft Turn-in Checklist before turning over an aircraft for disposal.

6.2.2.2. If the owning organization cannot remove all HAZMAT and/or classified equipment, the MAJCOM/ARC and Program Offices must pursue contract support to complete the demilitarization and disposal process.

6.2.2.3. The owning organization must obtain a signed DD Form 1348, *DoD Single Line-Item Requisition Document,* turn-in receipt from DLA Disposition Services. This signed receipt must then be provided to the unit AVDO, who will forward it through the MAJCOM/ARC AVDO to the Air Force AVDO.

6.2.3. The Program Office will submit a transfer request to the AFMC AVDO when GSA screening selects an aircraft for transfer from AMARG. Once selected, the AFMC AVDO will request a project action from AF/A4LM to document the transfer.

6.2.3.1. All aircraft, regardless of condition, must have a GSA release letter prior to turn-in to DLA Disposition Services. The only exception to this requirement is for aircraft destroyed OCONUS.

6.2.3.2. AF/A4LM will complete and sign an SF-120 to obtain a GSA Release letter.

6.2.4. The Air Force Strike Board.

6.2.4.1. The Strike Board serves as the final approval authority for excess aerospace vehicle disposition, with results reflected in the Migration Plan.

6.2.4.2. The Air Force Strike Board is co-hosted by AF/A4LM, AFMC/A4F, and 309 AMARG/MXDS, to brief Air Force retirements throughout the FYDP.

6.2.4.3. SPOs and MAJCOM/ARC AVDOs will use this forum to address aircraft induction scheduling, storage type changes, reclamation, and disposal.

DAVID H. TABOR
Lieutenant General, USAF
DCS, Plans and Programs

USSF—United States Space Force

U.S.C.—United States Code

Office Symbols

AF/A10S—Deputy Chief of Staff Strategic Deterrence and Nuclear Integration, Countering Weapons of Mass Destruction Division

AF/A1X-P&T—Deputy Chief of Staff, Manpower and Personnel Services, Directorate of Plans and Integration – Personnel and Training Panel

AF/A3T—Deputy Chief of Staff, Directorate of Training and Readiness

AF/A4L—Deputy Chief of Staff, Directorate of Logistics

AF/A4LM—Deputy Chief of Staff, Directorate of Logistics and Maintenance Division

AF/A4LR—Deputy Chief of Staff, Directorate of Logistics Readiness Division

AF/A4PY—Deputy Chief of Staff, Directorate of Weapon System Sustainment Division

AF/A5R—Director, Operational Requirements, DCS, Strategy, Design and Requirements

AF/A5RC— Director, Operational Requirements, Force Application Division, DCS, Strategy, Design and Requirements

AF/A8—Deputy Chief of Staff for Plans and Programs

AF/A8P—Directorate of Programs

AF/A8PE—Directorate of Programs, Program Integration Division

AF/A8NV—Nuclear Deterrence Operations Division

AF/A8PV—C2, EW, ISR Division

AF/A8XC—Combat Air Forces Division

AF/A8XM—Mobility Air Forces & Special Operations Forces Division

AFMC/A4—Air Force Materiel Command, Directorate of Logistics, Civil Engineering, Force Protection, and Nuclear Integration

AFMC/A4R—Air Force Materiel Command, Logistics Readiness Division

AFMC/A4/10—Air Force Materiel Command, Directorate of Logistics, Civil Engineering, Force Protection, and Nuclear Integration

AFMC/A4F—Air Force Materiel Command, Product Support Management Division

AFMC/A4M—Air Force Materiel Command, Maintenance Division

AFMC/A4MM—Air Force Materiel Command, Maintenance Division, Maintenance Branch

AFMC/A4/A10/A4RX—Air Force Materiel Command, Mission Readiness Branch

AFMC AFLCMC/GBM—Business and Enterprise Systems Directorate, Maintenance Division

AFMC AFLCMC/LPSZ—Propulsion Sustainment Integration Branch

AFMC AFLCMC/LPSZA—Engine Management Branch

AFNWC—Air Force Nuclear Weapons Center

AFOTEC—Air Force Operational Test and Evaluation Center (

AFTC/XP—Air Force Test Center Plans and Programs Directorate

DAF/TER—Department of the Air Force Test & Evaluation Resources Division

SAF/AQ—Assistant Secretary of the Air Force for Acquisition, Technology, and Logistics

SAF/AQD— Secretary of the Air Force Logistics and Product Support

SAF/SQ—Assistant Secretary for Space Acquisition and Integration

SAF/AQI—Secretary of the Air Force Information Dominance

SAF/AQP—Secretary of the Air Force Global Power

SAF/AQQ—Secretary of the Air Force Global Reach

A program, authorized by U.S. law, that allows foreign governments to purchase American defense equipment and services. Unlike other forms of military assistance, FMS requires the recipient nation to reimburse the United States for all costs—Secretary of the Air Force Financial Operations

SAF/IA—The Secretary of the Air Force International Affairs, Policy, Program and Strategy Directorate

SAF/IAPX—The Secretary of the Air Force International Affairs, Policy, Program and Strategy Directorate, Security Assistance Policy, International Strategy, Policy, and Training Division

Terms

Active Inventory—Aerospace vehicles authorized and assigned to operational units for missions, training, testing, and maintenance to fulfill Air Force requirements outlined in the Fiscal Year program.

Aerospace Vehicle Retirement—The official process of removing an aerospace vehicle from the Air Force's active inventory because it no longer meets operational requirements. This typically involves transferring the vehicle to another entity or designating it for disposal.

Aerospace Vehicle Termination—The official designation for an aerospace vehicle's complete removal from all Air Force inventories, including both active and inactive, due to a range of events. This designation can result from destruction, such as crashes, or when an aerospace vehicle has sustained irreparable damage. Additionally, transfer to another military branch, government entity, or donation to institutions like the National Museum of the United States Air Force, also constitute Aerospace Vehicle Termination.

Aircraft—A vehicle specifically designed and constructed for sustained, powered flight in the Earth's atmosphere.

Aircraft Inventory Categories—The Air Force classifies its aircraft inventory using two primary categories: assignment and possession. Each category is further broken down using specific purpose identifier codes. This system provides a comprehensive understanding of each aircraft's designated use, operational status, and responsible unit.

Assignment—The Air Force process of formally allocating aerospace vehicles to specific Major Commands (MAJCOMs). This allocation designates which MAJCOM is responsible for an aircraft and outlines its authorized purpose, such as wartime operations, training exercises, or testing. Specific purpose identifier codes are used to classify and track each assigned aircraft.

Attrition Reserve (AR)—Individual assets procured for the specific purpose of replacing anticipated weapon system losses due to peacetime or wartime loss or damage (Reference DoDI 3110.05, Sustainment Health Metrics in Support of Materiel Availability). A predetermined number of aerospace vehicles maintained by the Air Force to offset projected losses of operational aerospace vehicles. These losses can occur due to peacetime accidents, combat attrition, or other unforeseen circumstances.

Aerospace Vehicle Distribution Office (AVDO)—The entity responsible for managing and coordinating the distribution and transfer of aerospace vehicles to meet operational, research, or disposal needs within a specific organization or system.

Backup Asset Authorized (BAA)—The authorized number of backup aerospace vehicles, determined through careful analysis of mission needs, maintenance requirements, and potential risks, to ensure units can fulfill their missions even when some aerospace vehicles are unavailable due to maintenance or other factors.

Backup Asset Inventory (BAI)—The number of assets in addition to PAI that permit scheduled and unscheduled depot level maintenance, modifications, inspections, repairs, and other events to occur without reduction of individual assets available for assigned mission requirements. (Reference DoDI 3110.05, *Sustainment Health Metrics in Support of Materiel Availability*).

Bailment—Bailment occurs when individual assets are furnished by a DoW organization to the physical custody of a nongovernmental organization pursuant to the requirements of a Federal government contract. Contracted individual assets are those used by the military through a contractual agreement with a non-government party. Leased individual assets are those provided to parties outside of the DoW on a temporary basis under an arrangement governed by a memorandum of agreement or contract. Loaned individual assets are those provided to other Federal Government departments and agencies on a temporary basis governed by a memorandum of agreement (Reference DoDI 3110.05, *Sustainment Health Metrics in Support of Materiel Availability*). This typically involves Purpose Identifier Codes EB, ED, DN, VN, and XU.

Drone—An unmanned vehicle, operating in the air, on land, or at sea, that is controlled remotely or autonomously.

Force Structure—Force Structure programming is an iterative process, authorizing, allocating, assigning and balancing current and projected active inventory weapon systems against requirements across Fiscal Years. Force programmers must analyze the current and projected force structure, develop and evaluate options, and allocate resources to optimize the force structure and achieve operational effectiveness. The force structure must be regularly reviewed and revised to ensure alignment with changing operational requirements and budget constraints.

Force Structure Worksheet—The output of the Force Structure Database Management System (FSDM). It is the record of decision for programmatic outcomes for the funded flying hour program and authorized inventory.

Foreign Military Sales—A process through which eligible foreign governments and international organizations may purchase defense articles, services, and training from the United States Government. (Purpose Identifier Code XT).

Gain—The formal process where a unit assumes ownership and responsibility for an item.

Inactive Inventory—An aerospace vehicle removed from active operational status but retained within the Air Force inventory. The annual FSW and Program Objective Memorandum (POM) process determines which aerospace vehicles are designated as inactive, potentially down to the unit level. These aerospace vehicles can be utilized for parts reclamation, ground-based testing, ground training, and, in certain cases, flight testing if provided as Government Furnished Equipment (GFE).

Migration Plan—A Program Manager-developed roadmap that outlines the planned management and transition of aerospace vehicles throughout their lifecycle, encompassing force structure projections, divestment strategies (e.g., retirements, transfers, sales), and the status of stored assets. This plan helps anticipate and address future needs for sustaining the remaining aerospace vehicle inventory.

Mission Design Series (MDS)—Standard nomenclature used to identify aircraft and missiles. Used to identify and categorize military aircraft based on their intended purpose and design evolution. It assigns a unique designation, like "F-22A," where "F" indicates a fighter, "22" represents the design number, and "A" signifies the first iteration within that design series. For procedures regarding MDS changes or requests, refer to AFI 16-401, Designating and Naming Defense Military Aerospace Vehicles.

Possession—The formal assumption of responsibility for an aerospace vehicle, typically marked by its acceptance for operational use or a designated transfer of accountability.

Prepositioned/War Reserve—War reserve materiel and equipment strategically located to facilitate a timely response in support of combatant commander requirements during the initial phases of an operation.

Primary Asset Authorization (PAA)—The number of aircraft authorized to a unit for performance of its primary mission. It sets the foundation for allocating resources like personnel, equipment, and funding.

Primary Asset Inventory (PAI)—The number of individual assets assigned to meet the primary materiel authorization. PAI is the sum of mission, training, development-test, and other inventory sub-categories (Reference DoDI 3110.05, Sustainment Health Metrics in Support of Materiel Availability). The aerospace vehicles are assigned to a unit to fulfill its authorized primary mission requirements. This inventory encompasses vehicles designated for operations, training, testing, and other authorized purposes (PMAI, PTAI, PDAI, POAI).

Primary Development/Test Asset Inventory (PDAI)—The number of individual assets assigned to meet development and test requirements (Reference DoDI 3110.05, Sustainment Health Metrics in Support of Materiel Availability). Aircraft assigned primarily for testing of the aircraft or its components for purposes of research, development, test and evaluation, operational test and evaluation, or support for testing programs. Purpose Identifier Codes CB, EI, and EH.

Primary Mission Asset Inventory (PMAI)—The number of individual assets assigned for performance of an operational mission (Reference DoDI 3110.05, Sustainment Health Metrics in Support of Materiel Availability). Aerospace vehicles (Purpose Identifier Codes CC, CA, IF) designated for a unit's primary combat and wartime operations.

Primary Other Asset Inventory (POAI)—The number of individual assets assigned for special missions not elsewhere classified (Reference DoDI 3110.05, Sustainment Health Metrics in Support of Materiel Availability). Purpose Identifier Codes CF, ZA, and ZB.

Primary Training Asset Inventory (PTAI)—The number of individual assets assigned for technical and specialized training for operator or crew personnel or leading to operator or crew qualification (Reference DoDI 3110.05, Sustainment Health Metrics in Support of Materiel Availability). Aerospace vehicles (Purpose Identifier Code TF) designated for aircrew training and qualification, including technical and specialized skill development.

Program Element Code (PEC)—A unique code used to identify and track a specific Air Force activity or mission, encompassing its associated personnel, organizations, and resources.

Project Action—A formal request for transferring an aerospace vehicle, submitted through the designated Aircraft Disposition Website.

Purpose Identifier Code (PIC)—A two-letter code that designates the specific use or mission of an aerospace vehicle.

Reclamation—The process of recovering reusable components from an aerospace vehicle that is no longer in service due to damage, age, obsolescence, or reaching the end of its planned lifespan.

Reclamation Insurance Type (RIT)—Retired aerospace vehicles designated as a potential source of spare parts, even after initial component salvage.

"Strike Board"—The AF Strike Board is the forum for executing the AF Migration Plans.

Total Active Inventory (TAI)—The count of all individual assets in the fleet with an active mission, such as operations, training, test, backup, pre-positioned, and war reserve. Aircraft assigned to operating forces for mission, training, test, or maintenance functions. TAI = PAI + BAI +PWR + AR (Reference DoDI 3110.05, Sustainment Health Metrics in Support of Materiel Availability).

Total Inactive Inventory (TII)—Aerospace vehicles unavailable for military use due to storage, loan, lease outside the Department of War, utilization as Government Furnished Property, or other forms of operational removal.

Total Overall Asset Inventory (TOAI)—The complete count of all aerospace vehicles within the Air Force inventory, including both active (TAI) and inactive (TII) units.

Trainer—Equipment acquired specifically for formal training programs and subject to the reporting requirements outlined in this policy.

Type 1000 storage—Inviolate storage at AMARG, is where aircraft are maintained in a condition where they can be recalled to duty and fly again.

Unmanned Aerial System (UAS)—An interconnected system of equipment, communications, and personnel designed to operate and control an unmanned aircraft remotely.

Attachment 2

REQUIRED COORDINATION AND DOCUMENTATION PRIOR TO REMIS UPDATES

A2.1. The following tables detail the minimum coordination, documentation, and REMIS CFO reporting requirements for each aircraft transfer type.

A2.2. All active disposition changes must align with the Force Structure Worksheet. Units require a current POM or PCR before completing DAF Form 913. Exceptions are limited and require Panel Chair approval.

Table A2.1. Active Disposition Changes.

Types of Active Disposition Changes (CA, CB, CF, EH, EI, TF, TJ, ZA, ZB, DN, XC)	**Minimum Coordination** **Required prior to DAF Form 913 (additional Internal MAJCOM as required)	**Documentation required for AF AVDO to update REMIS**	**REMIS Chief Financial Officer (CFO) Reporting Requirements**
New Production	• Gaining MAJCOM AVDO • Lead Command AVDO • Air Force, Force Programmer • System Program Manager • *Engine Manger Info Copy*	• DD-250 • DAF Form 913 • Assignment Directive Number is accomplished after REMIS has been loaded	IAW DAFI 21-103 Last duty day of the month. Unit costs Useful life
MAJCOM to MAJCOM	• Losing MAJCOM AVDO • Gaining MAJCOM AVDO • Air Force, Force Programmer • *System Program Manager Info Copy*	• DAF Form 913 • IAW DAFI 21-103: o AFTO Form 290 or DD Form 1149 o Loss Message	
Changes to: **Mission Design Series, Purpose Code, Program Element Code**	• Assigned MAJCOM AVDO • Lead MAJCOM AVDO • Air Force, Force Programmer • *System Program Manager Info Copy*	• DAF Form 913 • DD-250 for MDS changes *Only*	Cost changes to the MDS Example: F-16 to QF-16 PPE to OM&S

			CFO Modification
Inactive to Active • Regeneration from AMARG • Transfer from another agency such as Navy	• Gaining MAJCOM AVDO • Lead Command AVDO • Air Force, Force Programmer • System Program Manager • *Engine Manger Info Copy*	• DAF Form 913 • Original DD-250 if available and DD Form 1149 • MAJCOM loss Message IAW DAFI 21-10	

Table A2.2. Internal Air Force Inactive Disposition Changes.

Types of Active Disposition Changes	Coordination Required prior to DAF Form 913	Documentation required prior to REMIS Update	REMIS CFO Reporting Requirements
Divestment from Active Inventory	• Losing MAJCOM AVDO • Lead MAJCOM AVDO • Gaining MAJCOM AVDO • Air Force Programmer • System Program Office • *Engine Manager Info Copy* • AF/A4LM screening IAW DoDM 4160.21 Vol 4. • Additional coordination is required based upon results of the screening described below:	• DAF Form 913 • DD Form 1149 • MAJCOM transfer Message IAW DAFI 21-103 Reference termination	
• GITA and TAA (TX, TA)	• Divestment Coordination above • Recipient of aircraft with MAJCOM AVDO	Optional MAJCOM GITA assessment (refer to **Attachment 6** of this publication)	
• Inactive Test (EB, ED, EJ)	• Divestment Coordination above	• DAF Form 913 • IAW DAFI 21-103 • CG Form 290 or DD Form 1149	
• AMARG Storage Inductions (XS, XT, XV, XX)	• Divestment Coordination above • AMARG AVDO • "AFMC/A4M" Parts Reclamation Office for Type 2000 and 4000 storages.	• DAF Form 913 • CG Form 290 • AFTO Form 345 • AFTO Form 2692 IAW DAFI 21-103	• Dependent upon the type of Storage • Type 1000 retain CFO reporting • Type 2000 and below no longer require CFO reporting

• Inactive Government Furnished Equipment (GFE) loans (XU)	• Loaned identified Coordination above • Air Force Sponsor remains assigned, and possession documents support the subsequent understanding. GEO Location documented in REMIS	• DAF Form 913 • IAW DAFI 21-103 • IAW DAFMAN 23-111 • IAW DAFMAN 23-119 • DD Form 1149	• CFO reporting based • Contractual document

Table A2.3. Termination Codes.

Termination Disposition changes	**Coordination Required prior to DAF Form 913**	**Documentation and steps required prior to REMIS updates**	**REMIS CFO Reporting Requirements**
Transfer to another DoW to include CAP Agencies (XY)	• Divestment Coordination above • Guided by AF/A4LM with exception to mishap • Losing MAJCOM AVDO • Lead MAJCOM AVDO • Air Force, Force Programmer • Program Office o *Engine Manager Info Copy* o Gaining DoW Organization POC o Gaining Organization DoW Accounting/SRANs	• DAF Form 913 • CG Form 290 or DD Form 1149 • Termination Message	
Transfer to NMUSAF (XY)	• Divestment Coordination above • NMUSAF POC from WPAFB (required)	• DAF Form 913 • CG Form 290 or DD Form 1149 • Termination Message	

Transfer to Agency outside of DoW through GSA (XY)	• Divestment Coordination above • GSA Coordination • POC from receiving organization	• SF-120 GSA website • SF-122/123 • DD Form 1149 • DoDM 4160.28 V1 and V4 Demilitarization/ Declassification Certificates for DLA/OSD • DAF Form 913 • Termination Message	
Disposal in place due to mishap or no continued use at the end of the screening. (N/A)	• Divestment Coordination above if approved to retire by Repair or Retire process for Class A Mishap • Program Office approval for repairs under $2M • For mishap aerospace vehicles only, host installation's Staff Judge Advocate and the Convening Authority's Staff Judge Advocate will request for legal release Air Force Legal Operations Agency (AF/JAOA) Joint Base Andrews, IAW AFI 51-307 paragraph 8.5 • GSA release letter is dependent upon	• Refer to DAFI 21-103 for total loss. DAF Form 913 is not required • MAJCOM AVDO contacts • Program Offices for reclamation determination • Legal Release from AFLOA • GSA Release Letter • Dependent on the circumstances, DLA Disposition Checklist (MAJCOM AVDO will provide) • DAF Form 913	Termination Codes Total loss versus other types of termination.

	circumstances GSA Coord is only required for CONUS aircraft.	• DD Form 1348 is DLA Disposition Services turn-in hand receipt. • Termination Message	
AMARG Disposal (XD)	• AMARG AVDO • Program Office • AFMC AVDO • *Info Copy* • *Lead Command AVDO* • *Air Force, Force Programmer* • *AMARG Disposal POC* • *Engine Manager*	Legal Release for mishap aircraft at AMARG (Only) • DAF Form 913 • SF-120 GSA website • GSA Release • DD Form 1348 is DLA Disposition Services turn-in hand receipt. • **DLA Demil Certification • Termination Message	

Attachment 3

ASSIGNMENT PURPOSE IDENTIFIER CODES

A3.1. The following table is an extracted subset of Attachment 17. IAW DAFI 21-103, *Equipment Inventory, Status, and Utilization Reporting*.

A3.1.1. Active Inventory Assignment Purpose Identifier Codes used in force structure programming in FSDM.

A3.1.2. Active Programmed Aircraft that usually remain in service. These aircraft are assigned a new MDS when expected to be completed and are unavailable for missions and training during modifications.

A3.1.3. Inactive Assignment Purpose Identifier Codes that are not used in force structure programming in FSDM.

Table A3.1. Assignment Purpose Identifier Codes.

Section 1. Active Inventory Assignment Purpose Identifier Codes used for Force Structure Programming and in REMIS			
Purpose Identifier Code (PIC)	**Short Title**	**PIC Code Definition**	**PIC Relationship to Associated Aircraft Terminology Types**
CA	Combat Support	Aerospace vehicles assigned or possessed for the primary mission of direct support of units engaged in conflict. Includes: tactical and aeromedical airlift, weather reconnaissance or surveillance, intelligence and security activities, navigation, air refueling, air rescue, airborne warning and control, airborne command post, photo mapping, communications relay, and special operations missions.	PMAI

CB	Combat Tactics Development and Equipment Evaluation.	Aerospace vehicles assigned or possessed for developing, improving, or evaluating operational employment ability (for example, OT&E).	PDAI
CC	Combat	Aerospace vehicles assigned or possessed for the primary mission of delivering munitions or destructive materials against or engaged in direct contact with enemy forces. Includes: ICBM, strategic or tactical bomber, strategic or tactical reconnaissance, forward air control, tactical electronic warfare, tactical fighter or attack, tactical drone/ remotely piloted aircraft or fixed wing gunship and special operations missions.	PMAI
CF	Combat Auxiliary Support	Aerospace vehicles assigned or possessed to accomplish essential functions that cannot be performed economically in the primary aerospace vehicles of combat and combat support units. Includes: Radar site evaluation and support, target support range, support missile site support, and traffic control and landing system inspection missions.	POAI
EH	Test support	Aerospace vehicles assigned or possessed for participation in test programs. Includes: PACE CHASE Test Bed Range and Test Pilot Training (e.g. test mission and safety chase flights).	PDAI
EI	Test	Aerospace vehicles assigned or possessed for complete system evaluation or for testing to improve the capabilities of the aerospace vehicle designated.	PDAI
IF	Industrial Fund	Aerospace vehicles assigned to or possessed by AMC for the accomplishment of single	PMAI

		manager operations for airlift service. Includes: Aerospace vehicle assigned to or possessed by strategic airlift, tactical airlift, domestic aeromedical, or airlift units.	
TF	Training	Aerospace vehicles assigned or possessed to accomplish student training combat crew training or dissimilar air combat training or combat crew training.	PTAI
ZA	Special Activity	Aerospace vehicles are assigned or possessed to accomplish special mission. Includes: Aerial Demonstration Attaché Military Assistance Advisory Group and other special missions.	POAI
ZB	Operational Support	Aerospace vehicles assigned or possessed to perform Air Force directed support airlift during peacetime contingencies and wartime. These missions include priority movement of personnel and cargo with time place or mission sensitive requirements.	POAI
Section 2. Active Programmed Aircraft that usually remain in service. These aircraft are assigned a new MDS when expected to be completed and are unavailable for missions and training during modifications.			
Purpose Identifier Code (PIC)	**Short Title**	**PIC Code Short Definition**	
DN	Depot Level Assignment--Depot Level Work Resulting in MDS Change	Aerospace vehicles in USAF depots (domestic or foreign) or contract facilities for the performance of maintenance modification modernization technical order compliance or reconditioning of a magnitude that results in a MDS change. Aerospace vehicles in this category are reported as both assigned and possessed by AFMC.	
VN	Contract Work Resulting in MDS Change	Aerospace vehicles on contract to a civilian facility for the performance of vehicle modification or instrumentation resulting in MDS change. Aerospace vehicles in this category are reported as both assigned and possessed by AFMC.	
Section 3. Inactive Assignment Purpose Identifier Codes that are not used in force structure programming in FSDM.			

Purpose Identifier Code (PIC)	Short Title	PIC Code Short Definition
EB	Contractor Test/Test Support	Aerospace vehicles provided to contractors as government furnished property in support of a prime Air Force contract. These aerospace vehicles will be utilized for complete system evaluation testing to improve the capabilities of the designated aerospace vehicle, support of specific test programs, or production support.
ED	Prototype Test	Unaccepted prototype experimental or preproduction aerospace vehicles procured and utilized in support of a prime Air Force contract when conditions of acceptance are contingent upon contractor achievement of a specified milestone. Aerospace vehicles in this category are assigned for overall inventory accounting purposes only. Assignment action does not affect contractors or program management. Reporting requirements applicable to accepted aerospace vehicles do not apply.
EJ	Ground Test	Aerospace vehicles assigned or possessed for non-flying ground testing and evaluation of the aerospace vehicle or systems. For temporary ground tests the possession code only be changed to EJ and only for the duration of the ground test. Will be returned to appropriate
PM	Security Assistance Program Aerospace Vehicles Temporary Diverted to USAF	Aerospace vehicles programmed for delivery and assignment to foreign countries under the Security Assistance Program which have been temporarily diverted to USAF for any purpose.
TA	Training Aid Aircraft Inactive and Aircraft Battle Damage Repair.	Aerospace Vehicle permanently assigned or possessed for ground training objectives. Non-flyable aerospace vehicles that, at a minimum, utilize the fuselage of an aircraft that was in the DAF Inventory to accomplish training objectives. Minimal maintenance is required for the systems and subsystems.
TX	Ground Instruction Inactive	Aerospace vehicles normally with a "G" prefix permanently assigned or possessed for ground instructional purposes.

XC	Congressional Abeyance	Aerospace vehicles or trainers restricted from use due to congressional action. XC is used for situations when otherwise serviceable aerospace vehicles or trainers cannot be utilized due to the lack of funding or qualified personnel. Commands in conjunction with lead commands will request the applicable program office provide minimum sustainment requirements and compliance intervals necessary to sustain a predetermined aerospace vehicle recoverability timeline for return to service established by the SECAF unless otherwise determined by law (example: operational status within 10 days of notification). The processing vehicles are maintained in a recoverable condition and will not be cannibalized.
XD	Excess Disposal	Inactive aerospace vehicles which are excess to all DoW needs 309 AMARG 4000 type storage. Aircraft are reclaimed upon designation to XD, unless programmed reclamation was previously accomplished, normally upon placement into XX or unless the Air Force Reclamation Program Manager waives reclamation. Weapon System PM can direct priority reclamation, as required. Components and repair parts are not excess until DoW programmed reclamation requirements have been satisfied. After programmed reclamation, the aircraft are processed for disposal
XR	Inactive Aerospace Vehicles Awaiting Final Disposition	This code is not issued or withdrawn without an approved AF Form 913. The assigned command determines how these aerospace vehicles will be used however, no change in external configuration is authorized and disposal requires HAF approval.

XS	USAF type 1000 Storage	Aerospace vehicles stored in anticipation of specific future Air Force operational requirements. Parts may only be removed with approval of AF/A4L and only if serviceable replacement parts are ordered. If parts are removed, the Weapon System PM and Propulsion PM will take concurrent action to acquire serviceable replacements, which need not be reinstalled but will be earmarked for the specific aerospace vehicles from which removed (parts will be collocated at the installation the aerospace vehicle is stored). AF/A4L is the approval authority for any parts not stored at 309 AMARG. If it is not feasible to acquire replacement parts, the Weapon System PM will submit a waiver request to AF/A4L or a request to reclassify the aerospace vehicle to another storage category to AF/A4LM. Aerospace vehicles or trainers will not be moved to "XS" until all replacement parts are acquired to restore the aerospace vehicle to a flyable condition. Aerospace vehicles are under the authority of HAF
XT	Security Assistance Program Hold Storage	Inactive aerospace vehicles or trainers stored in anticipation of specific future Security Assistance Program requirements for transfer to foreign governments either as an FMS or at no cost as Excess Defense Articles. Aerospace vehicles and trainers in this category are excess to DoW needs as flyable aerospace vehicles but may not be excess to DoW spare parts or component requirements. Aerospace vehicles in this category will normally be prepared for storage period in excess of 90 days and in a manner which will provide maximum aerospace vehicle preservation (AMARG 1000 type storage). The PM may initiate selected parts removal on input to storage and priority parts removals during storage without action to acquire or replace the removed parts. Since SAF/IA expects aerospace vehicles and trainers made

		available for sale will usually be whole, the PM will coordinate parts removal actions with SAF/IA through AF/A4LM. Acquisition of replacement parts will be initiated if the aerospace vehicle is reclassified to "XS" or designated for withdrawal in other than "as is" condition. Before aerospace vehicles and trainers in this category may be offered for transfer as Excess Defense Articles (Foreign Assistance Act Section 516517519), AF/A4LM will coordinate with AF/A4L to determine if DoW spare parts or components will be removed to support DoW needs as required by Federal Property Management Regulations (41 CFR 101-43.102 and DoDM 4160.21V4).
XU	Contractor Other	Aerospace vehicles or trainers provided to be approved USAF contractors as government furnished property for other than Research, Development, Test and Evaluation purposes.
XV	USAF Type 2000 Storage	Inactive aerospace vehicles or trainers stored to provide spare parts and components for the remaining operational mission aerospace vehicles. Aerospace vehicles and trainers in this category will normally be prepared for a storage period in excess of 90 days and preserved in a manner that will minimize expenditure of resources while maintaining components and parts in a reclaimable condition (AMARG 2000 type storage). The weapon system PM may direct selected parts removal on input to storage and priority removals during storage with no parts re-procurement or replacement action required unless the aerospace vehicle is re-categorized to "XS" or designated for withdrawal in other than “as is where is” condition. Aerospace vehicles or trainers in this category are not excess to DoW requirements.
XX	USAF Type 4000 Storage	Inactive aerospace vehicles or trainers placed in short term economical storage and preserved in accordance with TO 1-1-686 requirements. (309 AMARG 4000 type storage). AF/A4LM will ensure aerospace vehicles in this category are excess to DoW operational needs and place them on a reclamation project upon transfer to this storage category. After reclamation the Weapon System PM will direct item be placed into RIT or processed for

		disposal. The PM may direct selected parts removal upon input to storage and priority removals during RIT storage with no parts procurement or replacement action required unless the aerospace vehicle is re-categorized to "XS" or designated for withdrawal in other than "as is, where is" condition. Components and repair parts are not considered as excess until DoW reclamation requirements have been satisfied. Aerospace vehicles will remain in this category until AF/A4LM, or the Weapon System PM directs disposal or other disposition.
XY	Lease Loan	Aerospace vehicles or trainers on lease to commercial agencies or loaned to other governmental agencies for accomplishment of tests or other projects
YZ	National Museum of the USAF and Non-USAF	**Note: (**REMIS accountability only). Aerospace vehicles assigned to the National Museum of the USAF and non-USAF agencies, for example, U.S. Army, U.S. Navy, and Foreign Military Service. Not to be used for foreign government owned aerospace vehicle under USAF operational control.
Note: Aircraft Engines: When aircraft are assigned to a storage category other than XS or XT, the engines assigned to those aircraft are available to the Air Force Engine Manager for use as whole engines or for parts support. The Weapon System PM will notify the applicable engine PM of these types of assignments/transfers. **(T-2)**

Attachment 5

PROGRAM OFFICE TEMPLATE FOR REPAIR OR RETIRE RECOMMENDATIONS MDS TAIL NUMBER

A5.1. Lead Command/Lead Agent assessment of operational impacts if aerospace vehicle is not repaired: The Directorate of Logistics, Engineering, and Force Protection, 5th Generation Aircraft Division (ACC/A4F) indicates that with the limited number of F-22s, the CAF will have difficulty in meeting the broad range of OPlan taskings assigned to F-22 organizations without repair of this aircraft. ACC desires repair of 05-4089 rather than disposal. The F-22 System Program Office concurs.

A5.2. Assessment of reparability of the damaged aerospace vehicle: The estimated total cost to return the aircraft to a fully mission air worthy capable configuration is $13M. ACC/A4F and the F-22 Program Office agree the engineering estimate is sufficient to collectively make an informed repair decision.

A5.2.1. MDS (mission, design and series), serial number and location of aerospace vehicle: F-22A, Block 30, A/C 05-4089 is assigned to the 325 Fighter Wing (FW), Tyndall AFB FL.

A5.2.2. Overview of proposed repair strategy: The repair is to be performed at Hill AFB, UT where the mishap occurred. The largest cost drivers are post-production diminishing manufacturing source (DMS) items, manufacture of parts, labor and engineering. Similar landing gear and wing repairs have been accomplished by Contract Field Teams (CFT) and depot in the past and they are deemed to be low risk.

A5.2.3. Total cost estimate including labor, all materials and replacement equipment, fixtures, TDY, transportation, engineering design, packaging, shipping, etc.: Estimated cost is $13M to restore to the aircraft to its fully mission capable configuration.

A5.2.4. Length of time required to complete repair, including procurement of long-lead times: The repair process will require approximately 8 months after receipt of parts (lead times on critical parts currently unknown & in-work). With contracting process times, parts acquisition, aircraft induction, and actual repairs, the aircraft is estimated to return to service no earlier than CY18. Acquisition estimates of time required to obtain needed repair parts are based on required vendors still being in business, but they will need time to re-tool and manufacture parts.

A5.2.5. Airworthiness assessment of proposed repair: The proposed repairs are within the capacity and capabilities of Lockheed Martin and Boeing. They possess all necessary tools and knowledge required to perform the repairs and return the aircraft to an airworthy, original equipment condition.

A5.2.6. Cost, schedule, and technical risk assessment:

A5.2.6.1. Cost: $13M Schedule: Parts + 8 months total to repair. The schedule is based on previous repairs of other types of aircraft with similar damage.

A5.2.6.2. Technical Risks: There is a possibility of hidden damage not readily apparent to structural engineers during damage evaluation. This risk is assessed as Low/Moderate.

A5.2.7. Proposed repair source and capacity: The aircraft is not currently airworthy. The basis of estimate has all required repairs performed at Hill AFB by a CFT/Depot.

A5.2.8. Funds availability: Repair will be funded with the Centralized Asset Management (CAM) Weapons System Sustainment (WSS) budget. Year of execution requirement changes will be submitted through the Requirement Change Request (RCR) process and identified as an Unfunded Requirement (UFR), as necessary, for final approval through the AFMC CAM offices.

A5.2.9. Configuration of vehicle (which significant modifications are or are not installed): Tail 05-4089 was initially delivered to the Air Force in a Block 30 configuration and was upgraded to a 3.1 avionics/radar package & has already had SRP II upgrades installed.

A5.2.10. Remaining service life: Tail 05-4089 has flown 1661.2 hours. 6338.8 flying hours will remain on the airframe at the completion of these repairs (8,000 flight hour maximum service life).

A5.2.11. Fleet retirement/phase-out projection: IAW the F-22 Fleet Management Plan, 05-4089's projected retirement date based on current usage rates is November 2045.

A5.2.12. Other constraints and consideration: No additional constraints or considerations.

A5.3. Cost/schedule/funds/availability/risk assessment of. Alternate strategies to replace the aircraft with similar aircraft, if possible (e.g., activate from AMARG, procure additional if still in production, etc.):

A5.3.1. Replacement: Replacing the aircraft is currently not possible because the F-22 production line closed in the spring of 2012 and the tooling was dispersed to Sierra Army Depot for storage.

A5.3.2. Retirement: Neither ACC/A4F or the F-22 System Program Office wish to retire this airframe due to the limited F-22 fleet and the vital strategic role they play in this nation's defense.

A5.3.3. DEMIL/Disposal in Place: Not recommended at this time.

Attachment 6

TEMPLATE FOR REQUESTING GROUND INSTRUCTIONAL TRAINING AIRCRAFT (GITA) OR TRAINING AID AIRCRAFT (TAA)

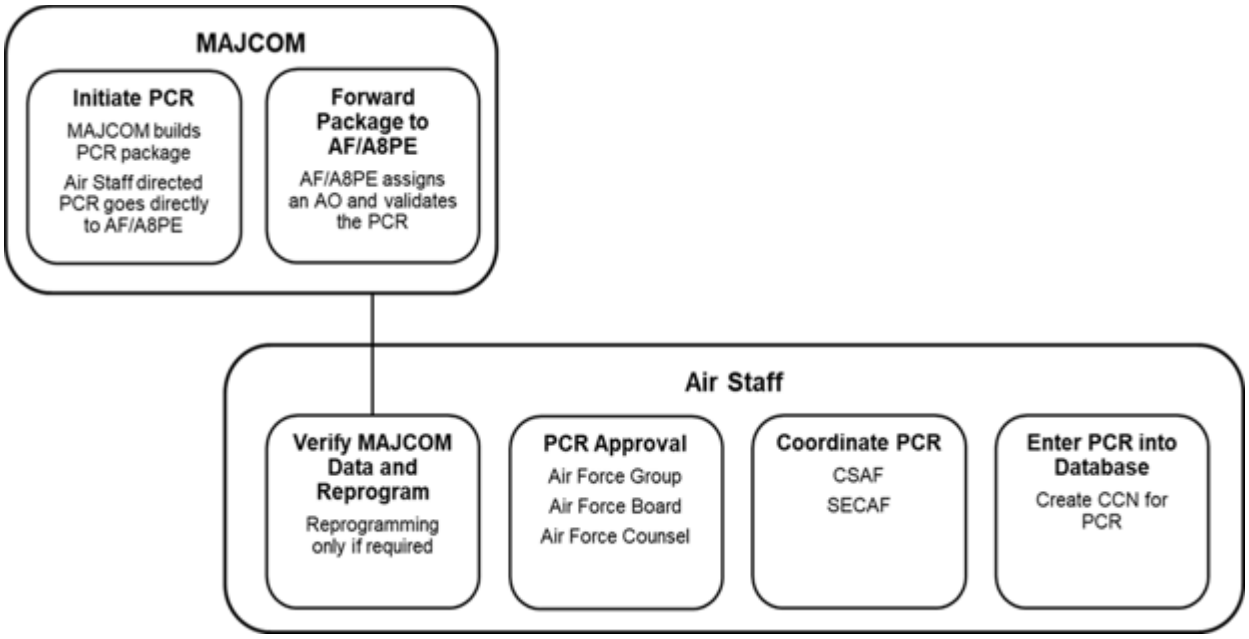

Figure A6.1. Requesting GITA/TAA Template.

1	Requesting wing
2	Equipment designator (EQD) requested
3	Quantity of aircraft
4	Describe briefly what aircraft configurations are necessary to accomplish the mission
5	Systems required operational for training
6	Date aircraft required
7	Weekly utilization programmed
8	Configuration management required
9	Title of courses to be supported
10	Training deficiencies that could result if GITA or TAA is not made available
11	Projected training requirements by FQ for 3 fiscal years
12	Aerospace ground equipment required
13	TO-21 equipment required
14	Adequacy of present facilities to support requested GITA or TAA
15	Estimate of the itemized cost to beddown the GITA or TAA
16	Estimate of cost of follow-on maintenance for 3 fiscal years
